December, 2014

Foreword

Welcome to the Monthly presentation organised by the Dissemination Branch of the Central Statistical Office (CSO). The CSO embarks on vigorous information delivery strategy to major stakeholders and the media institutions in order to increase utilisation of statistical products and services. The office produces a number of statistical products in the Economic, Social, Agricultural and Environmental areas. The information collected in these areas may be used for various purposes including policy formulation, planning, implementation, monitoring and evaluation of programmes and projects.

This Monthly publication is an attempt to provide highlights of CSO's work and how it can help media institutions and the general public to make use of data and information for sustainable national development and decision-making.

I would like to urge our readers and users of statistical information to send to us any comments that may enhance statistical production and contribute to the improvement of this bulletin.

INFLATION

Inflation decreases to 7.9 percent

The annual rate of inflation, as measured by the all items Consumer Price Index (CPI) for December 2014 was recorded at 7.9 percent compared to 8.1 percent recorded in November, 2014. This means that on average, prices increased by 7.9 percent between December 2013 and December 2014.

The Consumer Price Index (CPI) measures changes over time in the general level of prices of goods and services that households acquire for the purpose of consumption, with reference to the price level in 2009 (i.e. base year 2009 =100).

Zambia's Major Export Destinations by Commodity in November 2014

The major export destination in November 2014 was Switzerland, which accounted for 41.4 percent. The major export products to Switzerland were Cathodes & Sections of Cathodes of refined Copper accounting for 90.6 percent.

China was the second major destination of Zambia's exports accounting for 18.2 percent. The major export product to China was Copper blisters (54.7 percent).

The third major export destination was South Africa accounting for 9.5 percent. The major export product to South Africa was Cathodes and Sections of Cathodes

of refined Copper accounting for 30.3 percent.

Singapore was the fourth major export destination accounting for 7.5 percent. The major export products to Singapore were *Precious or semi-precious stones, worked but not set..., nes* (55.9 percent).

Congo DR was the fifth major export destination accounting for 6.5 percent. The major export product to Congo DR was *Sulphuric acid; oleum in bulk* accounting for 16.1 percent.

These five countries collectively accounted for 83.1 percent of Zambia's total export earnings in November 2014.

Zambia's Major Import Sources by Commodity in November 2014

The major source of imports in November 2014 was South Africa, accounting for 32.0 percent. The major import products from South Africa were Structures and parts of structures, nes, of iron or steel - minlead frames & super strs use contributing 3.8 percent.

The second main source of Zambia's imports was Congo DR which accounted

for 16.3 percent. The major import products from Congo DR were Copper ores and concentrates, which accounted for 86.0 percent.

China was the third main source of Zambia's imports accounting for 9.2 percent. The major import products from China were Generating sets, (excl. wind-powered) nes, accounting for 10.6 percent.

Other sources of Zambia's imports were Kenya and India, which collectively accounted for 11.6 percent of Zambia's Imports.

Import Market Shares by Regional Groupings, November and October 2014

The Southern African Development Community (SADC) regional grouping was the largest source of Zambia's imports accounting for 53.3 percent in November 2014. Within SADC, South Africa was the major source of Zambia's imports with 60.2 percent. Other notable markets were Congo DR, Zimbabwe, Mauritius and Namibia.

The Common Market for Eastern and Southern Africa (COMESA) regional grouping was the second largest source of imports accounting for 27.7 percent. Within COMESA, Congo (DR) was the main source of Zambia's imports, accounting for 59.1 percent. Other notable markets were Kenya, Zimbabwe, Mauritius, and Malawi.

Asia was the third largest source of Zambia's imports accounting for 22.5 percent in November 2014. Within Asia, China was the main source of Zambia's imports with 40.9 percent. Other notable markets were India, Japan, Singapore and United Arab Emirates.

The European Union was the fourth largest source of Zambia's imports accounting for 10.9 percent. Within this grouping, Italy was the main source of Zambia's imports with 30.3 percent. Other notable markets were the United Kingdom, Belgium, Netherlands and Germany.

AGRICULTURE STATISTICS

Land Preparation Methods Used by Farmers

The Post-Harvest Survey (PHS) collects information on land preparation methods used for crop production. The land preparation methods used by farmers are conventional hand hoeing, planting basins/potholes, chitemene ploughing, ripping, ridging, bunding, and chitemene zero tillage.

The 2011/12 PHS shows that a total of 2,577,818 hectares were planted to various crops. The largest proportion of this land was prepared by ploughing, representing 50.3

percent, followed by conventional hand-hoeing and ridging at 26.1 and 15.9 percent, respectively. The least used method of land preparation was the chitemene zero tillage at 0.4 percent.

Ploughing was the most widely used method of land preparation in Southern, Central and Western provinces, at 89.2, 73.7 and 71.8 percent respectively. Conventional hand hoeing was common in Copperbelt, at 52.1 percent followed by Muchinga provinces at, 50.0 percent.

Percentage Distribution of Area Prepared using Various Land Preparation Methods by Province

Province	Percentage of Area prepared using various Land Preparation Methods									Percent	Hectares
	Conventional hand hoe	Planting basins/potholes	Zero tillage	Ploughing	Ripping	Ridging	Bunding	Chitemene zero tillage	Chitemene loughing/hand hoe

Source: Post Harvest Survey 2011/2012

The PHS also collects information on the number of households using different land preparation methods by province. Countrywide, a total of 625,887.1 households used conventional hand hoeing as the main land preparation method. Conventional hand hoeing was mostly used in Northern Province, which accounted for 17.1 percent of the total, followed by Eastern and Muchinga provinces at 15.3 and 13.4 percent, respectively.

The ridging method was used by a total of 347,679.9 households in the country. This

method was widely used by households in Eastern and Northern provinces, accounting for 21.9 and 21.3 percent of the total, respectively.

Ripping was the least practiced method of land preparation with only 20,604.4 households using this method in the country. Eastern and Southern provinces had the largest number of households practicing this method at 44.4 and 24.5 percent of the total, respectively.

Percentage Distribution of Households using Different Land Preparation Methods by Province

E. Food aid import requirements 12/	0	0	0	0	0	0	0

Notes:

1/ Stocks expected to be held by commodity traders, millers, brewers, FRA, DMMU and commercial and small scale farmers as at 1st February 2014.

2/ Production estimates by MAL/CSO. Cassava production is based on the total area under cassava, using an annual yield figure of 11.7 tonnes per hectare (MAFF Root and Tuber Improvement Programme, 1996). A flour extraction rate of 25% is used. Other tubers are sweet potatoes and Irish potatoes.

3/ Human staple food consumption represents 70% (1,470kCal/person/day, CSO) of total diet (2,100kCal/person/day, National Food and Nutrition Commission) for the national population of 14.58 million people (based on CSO Census projections with 2.8% growth rate projected to February 2012, midmarket). The food balance shows an overall surplus of staple foods. Food prices February affect the level of food consumption.

4/ National strategic requirements expected to be carried over into the next season by FRA. (This amount of 500,000 Mt includes equivalent quantity that is already budgeted for).

5/ Estimated requirements by major stock feed producers.

6/ Estimated requirements by industrial breweries.

7/ Estimated retention of grain for other uses by smallholders.

8/ Post harvest losses are estimated at 5% for grains, sweet potatoes and cassava, in line with estimates from other SADC countries.

9/ Structural exports represents cross-border trade, mostly to the DRC, that occurs on a continuing basis and that is likely to occur during the 2012/13 marketing season. It does not include large-scale formal trade.

10/ Expected surpluses or deficits that arise after meeting minimum overall staple human consumption requirements as well as industrial Requirements.

The total surplus/deficit is expressed as maize equivalent using energy values.

The rice deficit is based on a 3 year rolling average of what is known to be imported each year, as indicated under D.

For cassava, the surplus represents cassava that is still in the ground and February not necessarily be harvested.

11/ Commercial imports/exports represent expected regional and international trade by the private sector.

12/ Total estimated requirement for food relief among vulnerable groups, to be imported. This could be met with maize or other grains.
