June, 2015

### Foreword

Welcome to the Monthly presentation organised by the Dissemination Branch of the Central Statistical Office (CSO). The CSO embarks on vigorous information delivery strategy to major stakeholders and the media institutions in order to increase utilisation of statistical products and services. The office produces a number of statistical products in the Economic, Social, Agricultural and Environmental areas. The information collected in these areas may be used for various purposes including policy formulation, planning, implementation, monitoring and evaluation of programmes and projects.

This Monthly publication is an attempt to provide highlights of CSO's work and how it can help media institutions and the general public to make use of data and information for sustainable national development and decision-making.

I would like to urge our readers and users of statistical information to send to us any comments that may enhance statistical production and contribute to the improvement of this bulletin.

# INFLATION

## Inflation increases to 7.1 percent

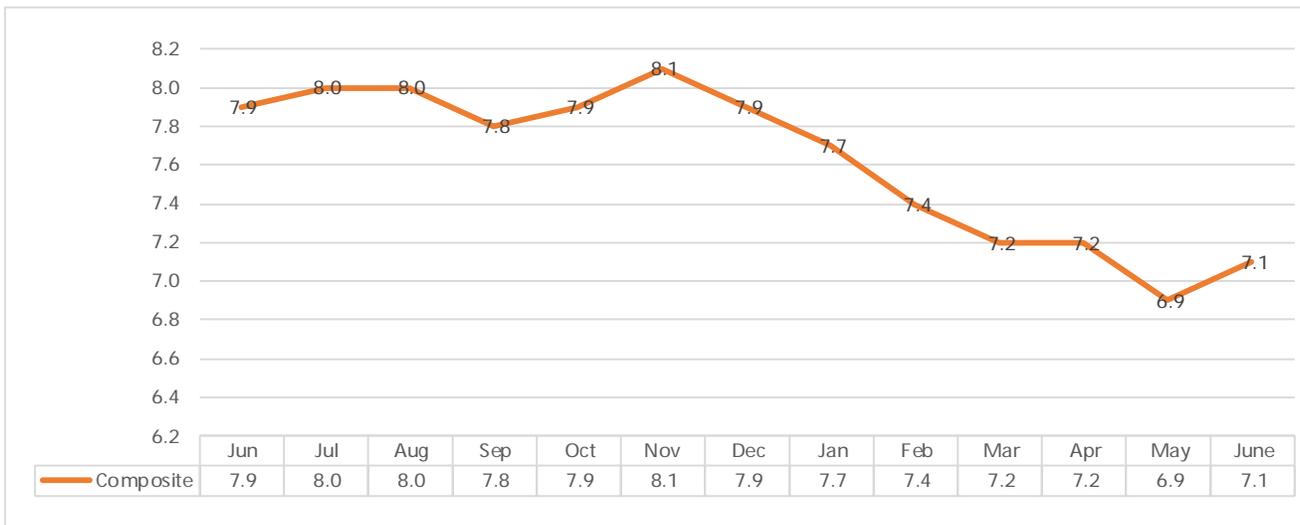

The annual rate of inflation, as measured by the all items Consumer Price Index (CPI) for June 2015 was recorded at 7.1 percent compared to 6.9 percent recorded in May, 2015. This means that on average, prices increased by 7.1 percent between June 2014 and June 2015.

This increase is mainly attributed to increases in Non-food items particularly

Liquid Fuels (Diesel, Kerosene and Petrol) and House rentals.

The Consumer Price Index (CPI) measures changes over time in the general level of prices of goods and services that households acquire for the purpose of consumption, with reference to the price level in 2009 (i.e. base year 2009 =100).

**Notes:**

- 1/ Stocks expected to be held by commodity traders, millers, brewers, FRA, DMMU and commercial and small scale farmers as at 1st May 2015.
- 2/ Production estimates by MAL/CSO. Cassava production is based on the total area under cassava, using an annual yield figure of 11.7 tonnes per hectare (MAFF Root and Tuber Improvement Programme, 1996). A flour extraction rate of 25% is used. Other tubers are sweet potatoes and Irish potatoes.
- 3/ Human staple food consumption represents 70% (1,470 kCal/person/day, CSO) of total diet (2,100 kCal/person/day, National Food and Nutrition Commission for the national population of 14.58 million people (based on CSO Census projections with 2.8% growth rate projected to October 2014, mid-market. The food balance shows an overall surplus of staple foods. Food prices may affect the level of food consumption.
- 4/ National strategic requirements expected to be carried over into the next season by FRA.(this amount of 500,000 Mt includes equivalent quantity that is already budgeted for).
- 5/ Estimated requirements by major stock feed producers.
- 6/ Estimated requirements by industrial breweries.
- 7/ Estimated retention of grain for other uses by smallholders.
- 8/ Post-harvest losses are estimated at 5% for grains, sweet potatoes and cassava, in line with estimates from other SADC countries.
- 9/ Structural exports represents cross-border trade, mostly to the DRC, that occurs on a continuing basis and that is likely to occur during the 2015/16 marketing season. It does not include Formal trade.
- 10/ Expected surpluses or deficits that arise after meeting minimum overall staple human consumption requirements as well as industrial requirements. The total surplus/deficit is expressed as maize equivalent using energy values. The rice deficit is based on a 3 year rolling average of what is known to be imported each year, as indicated under D.
- 11/ Commercial imports/exports represent expected regional and international trade by the private sector been harvested. For cassava, the surplus represents cassava that is still in the ground and may not necessarily be harvested.
- 12/ Total estimated requirement for food relief among vulnerable groups, to be imported. This could be met with maize or other grains.
