2.1 Coverage and Target Population	2
2.2 Sample Design Specification	2
2.3 Sample size determination	2
Chapter 3: Characteristics of Agricultural Households	3
3.1 Distribution of Agricultural Households	3
3.1.2 Type of Agricultural Household as at January 2018	4
3.1.3 Gender disaggregation of Agriculture and Livestock keeping Household Heads	5
3.1.3.1 Gender of Head of Agricultural Households	5
3.1.3.2 Gender of Head of Livestock-raising Households	6
3.1.3.3 Gender of Head of Bee Keeping Households	7
3.1.3.4 Gender of Head of Fish Farming Households.	7
3.1.3.5 Gender of Head of Crop/Fodder Production Households	8
3.1.8 Household Heads by Highest Level of Education Completed	9
3.1.9 Household Size of Livestock, Fish Farming and Bee Keeping Households	9
Chapter 4: Livestock and Poultry Population	11
4.1 Livestock Raising Household	11
4.2 Population of Different Types of Livestock	11
4.2.1 Cattle Population	11
4.2.2 Goat Population	13
4.2.3 Sheep Population	13
4.2.4 Pig Population	13
4.3 Herd and Flock Size of Different Types of Livestock	13
4.3.1 Average Number of Cattle	13
4.3.2 Average Number of Goats	13
4.3.3 Average Number of Sheep	13

4.3.4 Average Number of Pigs	13
4.4 Herd Composition	14
4.4.1 Cattle herd composition	14
4.4.3 Cattle Herd Size	16
4.4.4 Goat Herd size	17
4.4.5 Sheep Herd size	18
4.4.6 Pig Herd Size	18
4.5 Poultry Production	19
4.5. 1 Chicken Population	19
4.6 Dogs and Cats Population	20
4.6.1 The Dog Population	20
4.6.2 The Cat Population	20
4.6.3 Population of Other Livestock and Poultry	21
Chapter5: Honey Production	22
5.1 Types of beehives kept by Households	22
5.2 Number of beehives	23
5.3 Comb Honey production and sales	24
5.3.1 Quantity of Comb Honey Produced	24
Chapter 6: Fish Farming	25
6.1 Number of Households and Establishment Involved in Fish Farming	25
6.2 Facilities used for Fish farming	25
6.3 Type of Fish Produced by Households and Establishment	28
6.4 Quantity of fish harvested and sold	28
6.4.1 Quantity of Fish Harvested by Households and Establishment	28
6.4.2 Quantity of Fish Species Harvested by Households and Establishment	29
List of Key Persons involved in the Analysis and Report writing	31

Foreword and Acknowledgement

Foreword

The Government of the Republic of Zambia has placed the Fisheries and Livestock sub sectors to be the main stay of agriculture. Fisheries and Livestock production have fared well in drought situations as compared to other forms of agriculture such as crop production. In time of crop failure, Fisheries and Livestock sub sectors have provided a robust food security providing food products, employment, income and draught power. In view of the importance of the fisheries and Livestock-sub sectors to

the Zambian economy, it is very important that sound and informed agricultural policy making is based on credible and robust information.

For the past three decades Zambia has had no stand-alone comprehensive Livestock and Aquaculture Census besides the two Agriculture Censuses conducted in 1970/1971 and 1991/1992 Agricultural Seasons. Most of the surveys conducted in the Livestock and Fisheries sector, are skewed towards crop production and given this situation, sub-sector decisions and policies have been based on outdated statistics which do not reflect what is obtained on the ground. Thus, on this account a Livestock and Aquaculture Census was conducted in January 2018 as a baseline in order to facilitate smooth policy formulation and implementation in the sub-sectors.

It is our sincere hope, therefore, that the results of the 2017/2018 Livestock and Aquaculture Census will be used to measure the performance of the economy as well as an input into gauging what kind of policy actions to be implemented in the future. This will assist policy makers to make informed decisions, allocate resources, justify investment in the sub-sectors and aid the development of fisheries and Livestock enterprises.

Acknowledgement

The 2017/2018 Livestock and Aquaculture Census was conducted in January 2018. The Census was undertaken in recognition of the importance of robust and rigorous statistics for informed decision making and policy formulation. Since independence in 1964, two Agricultural censuses (both had crop and Livestock sections) have been conducted in Zambia, i.e. 1970/1971 agricultural season and 1991/1992 agricultural season and hence Sub-sector decisions and policy have been relying on old statistics which do not reflect what is obtaining on the ground.

The sample for the 2017/2018 Livestock and Aquaculture Census was drawn based on the 2010 Population and Housing Census, and it covered both Households and Establishments.

This report presents Summary Results of the 2017/2018 Livestock and Aquaculture Census. The Summary Results are on production and management of Livestock, Fish Farming, Honey and Poultry; Demographics of households involved in Livestock production, reproduction and management; and household assets and equipment. The success of the 2017/2018 Livestock and Aquaculture Census was attributed to availability of funds and other support and as such we would like to express our sincere thanks to all those who provided such assistance.

The Government of the Republic of Zambia is profoundly thanked for providing funds, through the Ministry of Finance, for conducting the 2017/2018 Livestock and Aquaculture Census. We wish also to appreciate the financial support from ADB, EU (PEP II) and IFAD for supporting the data processing of the 2017/2018 Livestock and Aquaculture Census. Our sincere appreciation also goes to all the professionals and consultants (University of Zambia, Indaba Agricultural Policy Research Institute, Zambia National Farmers Union, Zambia Institute of Policy Analysis and Research, and Veterinary Council of Zambia) who worked hard in shaping and fine-tuning the 2017/2018 Livestock and Aquaculture Census questionnaire.

Finally, our gratitude is extended to all the technical and support staff at both the Ministry of Fisheries and Livestock and the Central Statistical Office, the Provincial Administrators, and the Enumerators for their effort and diligence in producing a high quality data set and analysis presented in this report. It is my sincere hope that the statistics contained herein will help in improving decision making and policy formulation in the sub-sector of Livestock and fisheries.

Chapter 1: Background

1. Introduction

In January 2018, the Government of the Republic of Zambia conducted a Sample Census of Livestock and Aquaculture following the increasing recognition of the importance of statistics in informed decision making and policy formulation. Zambia has had no stand-alone Livestock and Aquaculture Census besides the two Agriculture Censuses conducted in 1970/1971 and 1991/1992 agricultural seasons. Thus, for the past 25 years, informed decision and policy making were based on old statistics

and, in many cases, inaccurate administrative data. With the policy emphasis on diversification of the agriculture sector into Livestock and Aquaculture production to enhance household food security, nutrition, income generation and employment, the need for up to date accurate Aquaculture and Livestock statistical data cannot be over emphasized.

The 2017/2018 Livestock and Aquaculture Census was conducted for both Households and Establishments (Commercial, Government and NGO entities) in the country. Thus this report gives a description of the total Livestock and Aquaculture Sub-Sector as at January 2018.

Chapter 2: Survey Methodology and Organization

This chapter explains the coverage and the target population and the sampling method used in conducting the 2017/2018 Livestock and Aquaculture census.

2.1 Coverage and Target Population

The 2017/2018 Livestock and Aquaculture Sample Census covered all household populations in both rural and urban areas of Zambia in the sampled areas. The design for the survey called for a representative probability sample that was large enough to produce reliable estimates at national, provincial, rural and urban, and district levels. Overall, a representative probability sample of at least 250,000 households was covered from 2,062 Enumeration Areas (EAs). All households in the selected EAs were interviewed.

2.2 Sample Design Specification

Stratified cluster sampling method was used in the selection of the sample. This meant that clusters or EAs were selected and each and every household in the selected cluster was enumerated. The method was appropriate as the probability of finding Livestock-raising, and fish farming households is increased. The other advantage of this was that the cost of listing the households in order to draw a sample of household as the final stage of sampling was cut.

During the selection of clusters, 2010 Census of Housing and Population information was used to stratify the EAs by livestock raising

category. Three categories of clusters were created. The first category included EAs in which 45 % or more households were reported to be rearing livestock at the time of the 2010 census, the second category included EAs in which below 45 % of households were rearing livestock. The third category included EAs where there was no presence of livestock raising activity at the time of 2010 census. This kind of stratification was done to ensure that all Enumeration Areas where livestock raising was a predominant activity were well represented in the survey. This approach is similar to what is done in the Crop Forecast and Post-Harvest Surveys where certain crops are identified for special attention in the sampling frame because of their importance and localized geographic distribution in order to ensure their representativeness in the sample.

2.3 Sample size determination

The sample size was determined based on the minimum sample size that would be required for analysis at district level.

The main considerations that affect the size of the sample were: the expected estimate of an indicator of interest (proportion rearing livestock in this case), margin of error desired, level of confidence desired, design effect, expected response rate and number of domains (clusters of the population for which separate estimates are required).

Chapter 3: Characteristics of Agricultural Households

This chapter gives a summary of demographic and agricultural characteristics of Households and Establishments engaged in agricultural activities as at January 2018. The main agricultural characteristics include the number of households involved in various agricultural activities (i.e. Livestock/Poultry, Fish Farming, Bee Keeping and Crop Production). The main demographic characteristics highlighted are Gender, Education Level and Marital Status of household heads, as well as the Size of the Livestock/Bee keeping/Fish farming households.

3.1 Distribution of Agricultural Households

Agricultural Households are households that raise Livestock, Fish, keep Bees and/or grow Crops. Of a total 3,727,362 estimated households

in Zambia, 2,267,999 (61%) households (both Rural and Urban households) were engaged in agricultural activities as at January 2018 while 1,459,393 (39%) were not engaged in any agricultural activities nationwide.

Table 3.1 shows the distribution of agricultural and non-agricultural households by Province. Eastern Province had the highest number of agricultural households in the country (349,980 households or 15.4% of the total agricultural households) followed by Southern Province which had 302,094 households representing 13.3% of the agricultural households. North-Western Province had the lowest number of agricultural households (147,712 households) representing 6.5% of the total agricultural households in the country.

Table 3.1: Distribution of Households by Type of Household and Province as at January 2018

3.1.2 Type of Agricultural Household as at January 2018

Of the total number of agricultural households, 1,641,825 were involved in Livestock raising, Fish Farming or Bee keeping, representing

72% of the households involved in agriculture (Chart 3.1)

Figure 3.1: Percent of Agricultural Households by Livestock/Aquaculture/Bee Sector

Western	187,356	8.3	130,938	8	927	2.5	145	1.5	177,367	8.6
Zambia	2,267,999	100	1,638,423	100	37,092	100	9,615	100	2,052,379	100

Livestock Raising: A total of 1,638,423 households were involved in Livestock-raising as at January 2018, representing 72.2% of the total agricultural households in the country. Southern Province had the highest number of Livestock-raising households (16.1%), followed by Eastern Province (16.0%). Northern and Copperbelt Provinces accounted for 10.2% and 8.7% respectively while North-Western Province accounted for the lowest percentage at 6%.

Bee Keeping: A total of 37,092 households (accounting for 1.6% of the agricultural households) were involved in Bee Keeping as at January 2018. North-western Province had the highest number of households involved in Bee Keeping (26%), followed by Eastern Province (22.9%) while Luapula Province had the lowest number accounting for 0.3%.

Fish Farming: A total of 9,615 households (accounting for 0.42% of the agricultural households) were involved in Fish Farming as at January 2018. Northern Province had the highest number of Fish Farming households (33.9%) while Western Province had the lowest number accounting for 1.5%.

Crop/Fodder Production: A total of 2,052,379 households (accounting for 90.5% of the agricultural households) were involved in Crop/Fodder Production as at January 2018. Eastern

Province accounted for the highest percentage of these households at 16.6% while Lusaka Province accounted for the lowest percentage at 5.6%.

3.1.3 Gender disaggregation of Agriculture and Livestock keeping Household Heads

3.1.3.1 Gender of Head of Agricultural Households

Table 3.3 shows that out of the total agriculture households 1,729,518 (76.3%) were male-headed and 538,482 (23.7%) were female-headed as at January 2018. Female headed households represent around a quarter of the number of agricultural households in the country.

Muchinga Province had the highest percentage of male-headed agricultural households compared to female-headed households (80.2% compared to 19.8%) followed by Northern Province (79.3% compared to 20.7%).

Western Province had the lowest percentage of male-headed agriculture households compared to female-headed households (64.0% compared to 36.0%). The Province with next lowest percentage of male headed agricultural households was North-western at 73.2% representing 10% points less.

Table 3.3: Distribution of Agricultural Households by Gender as at January 2018

Province	Agricultural Household Heads				
	Male	Percent	Female	Percent	Total
	Number		Number		
Central	194,121	76.8	58,595	23.2	252,716

Zambia	1,729,518	76.3	538,482	23.7	2,267,999

3.1.3.2 Gender of Head of Livestock-raising Households

Table 3.4 shows that out of the estimated 1,729,518 male-headed households engaged in agricultural activities as at January 2018 nationwide, a total of 1,295,827 (74.9%) were

engaged in Livestock-raising compared to 63.6% of 538,482 female headed households who were engaged in Livestock-raising.

Table 3.4: Distribution of Livestock Raising Households by Gender of Household Head and Province as at January 2018

Province	Agricultural Households		Livestock raising Households				
	Male	Female	Male Headed		Female Headed		Percent Point Difference
	Number	Number	Number	Percent	Number	Percent

3.1.3.3 Gender of Head of Bee Keeping Households

Table 3.5 shows that out of the estimated 1,729,518 male-headed households engaged in agricultural activities as at January 2018 nationwide, a total of 34,880 (2.0 percent)

were engaged in Bee-keeping compared to 0.4 percent of the 538,482 female-headed households who were engaged in Bee keeping.

Table 3.5 Distribution of Bee-keeping household Heads by Gender of Household Head and Province as at January 2018

3.1.3.4 Gender of Head of Fish Farming Households.

Table 3.6 shows that out of the estimated 1,729,518 male-headed households engaged in agricultural activities as at January 2018 nationwide, 0.51 percent were engaged in Fish Farming. Of the estimated 538,482 female-headed households engaged in agricultural activities, 0.13% were engaged in Fish Farming. Northern Province had the highest percentage

of male-headed households involved in Fish Farming at 1.60 percent while Southern Province had the lowest at 0.05 percent. Northern Province had the highest percentage of female-headed Fish Farming households at 0.25 percent while Western Province had the lowest at 0.01 percent.

3.1.8 Household Heads by Highest Level of Education Completed

Out of the 1,641,825 Livestock, Fish Farming and Bee Keeping household heads, the most common level of education attainment was Primary representing 839,958 households (51.2 percent), followed by secondary education at 209,535 (12.8 percent), while 167,510 (10.2%) had never been to school.

Eastern Province had the highest percentage of livestock raising household heads that had completed Primary Education accounting for 13.9 percent. Lusaka Province had the highest percentage of household heads that had not been to school at 18.0%. The highest percentage of household heads that had Bachelor's Degree level of education was in Lusaka Province at 43.1 percent. (Table 3.8).

Table 3.8: Distribution of Livestock, Fish Farming and Bee Keeping Household Heads by Level of Education Completed and Province as at January 2018

Province	Total Livestock/ Fish /Bee Households	None	Primary	Junior Sec	Senior Sec	A level	College/ Under Graduate	Certificate/ Diploma	Bachelors Degree	Masters degree & above

3.1.9 Household Size of Livestock, Fish Farming and Bee Keeping Households

The national average household size for male headed households involved in livestock, fish and bee keeping was 5.8, while that of female-headed households was 4.6.

North Western Province had the largest average household size (6.2) for male-headed

households and Northern Province had the smallest average household size (5.5).

Copperbelt Province had the largest average household size (5.1) for female-headed households while Northern Province had the smallest average household size (4.1).

Table 3.9: Average Household Size of Livestock, Fish Farming and Bee Keeping Households by Gender and Province as at January 2018

Chapter 4: Livestock and Poultry Population

This chapter gives summary results of the population of both Livestock and Poultry in the country as at January 2018. The number of households raising livestock and Poultry are also estimated. The chapter further presents the average number of Livestock per household.

4.1 Livestock Raising Household

As at January 2018, the number of households raising cattle was 347,031, 481,968 raised goats, 19,909 raised sheep and 178,848 raised

pigs. Establishments accounted for 1,049 raising cattle, 588 raising goats, 285 raising sheep and 263 raising pigs.

Table 4.1 further indicates that Cattle raising households were predominant in Southern and Eastern Provinces, goat raising households were predominant in Southern, Eastern and Central Provinces; sheep raising households were predominant in Eastern and Southern Provinces and Pig raising households were most common in Eastern and Southern Provinces.

Table 4.1: Number of Households by Type of Livestock Raised as at January 2018

Livestock Raising Households as at January 2018								
Province	Cattle	Percent	Goat	Percent	sheep	Percent	Pigs	Percent

4.2 Population of Different Types of Livestock

The total number of Livestock kept as at January 2018 is presented in table 4.2.

The contribution of establishments to the total herd and flock sizes in the country were small, especially for Cattle, Sheep and Goats.

4.2.1 Cattle Population

The Cattle population as of January 2018 was 3,714,667 (3,474,095 from smallholder households and 240,572 from establishments). Southern Province accounted for the highest number of Cattle (1,315,238), at 35.4 percent of the total national herd, followed by Central Province at 22.5 percent. Luapula Province accounted for the lowest percentage of cattle population at 0.3 percent of the total national stock as shown in table 4.2.

12

Province	Cattle			Goats				Sheep				Pigs				
	From HHs	From Estab	Total	Percent	From HHs	From Estab	Total	Percent	From HHs	From Estab	Total	Percent	From HHs	From Estab	Total	Percent

Note: HH = Household, Estab = Establishment(registered entity)

4.2.2 Goat Population

The total Goat population in the country (from both Household and Establishment) as of January 2018 was 3,583,696 (3,558,614 from households and 25,082 from establishments). Southern Province accounted for the highest number at 36.0 percent of the total national herd, followed by Central Province at 16.4 percent. Western Province accounted for the lowest percentage of goat population at 1.9% of the total national stock (Table 4.2).

4.2.3 Sheep Population

The total Sheep population (from both Household and Establishment) was 170,262 of which Southern Province accounted for the highest percentage, at 36.8 percent of the total national stock, followed by Eastern and Central provinces at 17.9 and 17.5 percent, respectively. Western Province accounted for the lowest percentage of sheep population at 0.2 percent. Establishments made moderate contribution to the sheep stocks of Southern and Central Provinces but minimal or no contribution to other provinces (Table 4.2).

4.2.4 Pig Population

The Pig population from both Household and Establishment as at January 2018 was 1,082,765 of which Eastern Province accounted for the highest percentage, at 28.3 percent of the total national stock, followed by Southern Province at 16.8 percent. Luapula Province accounted for the lowest percentage of pig population at 2.0 percent. Establishments contributed 47,708 heads to the national pig stock and Lusaka province contributed more than half of the national stock at 53 percent. In other provinces, Establishments made little or no contribution (Table 4.2).

4.3 Herd and Flock Size of Different Types of Livestock

4.3.1 Average Number of Cattle

The average number of Cattle per household as at January 2018 was 10 heads, however this varied from between 14.7 per household in Central Province to 4.7 per household in Northern Province (Table 4.3). The average number of Cattle per establishment was 223 heads.

4.3.2 Average Number of Goats

The average number of Goats per household as at January 2018 was 7.4 heads. However this varied from 11.4 per household in Lusaka Province to 4 per household in Luapula Province (Table 4.3). The average number of goats per establishment was 42 heads.

4.3.3 Average Number of Sheep

The average number of Sheep per household as at January 2018 was 7.5 heads, however this varied from 12 per household in Lusaka Province to 3 per household in Western Province as shown in Table 4.3. The average number of Sheep per establishment was 76 heads.

4.3.4 Average Number of Pigs

The average number of Pigs per household as at January 2018 was 5.8, however this ranged from 19.5 per household in Lusaka Province to 2.5 per household in Northern and Luapula Provinces respectively (Table 4.3). The average number of Pigs per establishment was 181 heads.

Table 4.3: Average Herd/Flock Size of Livestock Type per Household by Province as at January 2018.

Herd/flock size per household by livestock type								
Province	Number of Head per Household				Number of Head per Establishment			
	Cattle	Goats	Sheep	Pigs	Cattle	Goats	Sheep	Pigs
Central	14.7	9.1	11.7	6.3	240	43	83	154
Copperbelt	9.8	7.7	9.7	12.6	101	27	36	81

Northern	4.7	4.3	3.7	3.5	51	18	5	30
North Western	8.1	6	5.7	6.3	131	36	46	22
Southern	11.7	10.3	8.8	5.1	388	66	106	206
Western	14.1	5.5	3	6.5	41	19	21	5
Zambia	10	7.4	7.5	5.8	223	42	76	181

4.4 Herd Composition

4.4.1 Cattle herd composition

Of the total 3,714,667 cattle raised in the country as at January, 2018 (from households

and establishments), cows accounted for the largest category of cattle raised at 43.2%, followed by trained oxen at 18% and Heifers at 12.5%. The percentage of calves was 12%, bulls was 4.9% and untrained oxen contributed 4% (table 4.4).

Table 4.4: Distribution of Cattle Population by Category of Cattle as at January 2018.

	Cattle	Cows	Heifers	Bulls	Untrained Oxen	Trained Oxen	Tollies/ Steers	Calves
Number	3,714,667	1,603,078	464,175	180,749	146,269	660,667	218,364	441,365
Percent	100	43.2	12.5	4.9	4.0	18.0	6.0	12.0

Table 4.5 shows that of the total 1,603,078 cows in the country, Southern Province had the highest number (contributing 36% of the total stock in the country). This was followed by

Central Province with 25%. The Provinces with the smallest number of cows were Luapula and Northern Provinces with 1% each.

Table 4.5: Cattle Population by category of Cattle as at January 2018.

Province	Cattle		Cows		Heifers		Bulls		Untrained Oxen		Trained Oxen		Tollies /Steers		Calves

Southern Province followed by Eastern Province had the highest percentages of trained oxen at 38 percent and 26 percent, respectively. Muchinga and Luapula had the lowest percentages at 1 percent and 0 percent, respectively.

A total of 180,749 bulls were recorded as at January, 2018. Southern and Eastern Provinces recorded the highest numbers at 22 % and 20% of the total number of bulls respectively. This was followed by Central and Western Provinces at 18 and 11 percent, respectively. Northern and Luapula Provinces recorded the lowest percentage of bulls at 3 percent and 1 percent, respectively.

The highest number of steers were found in Central and Southern Provinces accounting for 31 percent and 30 percent, respectively of the total steers population in the country respectively.

4.4.3 Cattle Herd Size

Of the 347,031 cattle raising households as at January, 2018, (190,056) had a herd size of 1-5 cattle followed by households with 6-10 cattle (77,551). The results indicate that 3,3 % of households raising cattle had a herd size greater than 40 heads. Households with herd sizes above 150 were 951 and these were found in Central, Lusaka, Southern and Western Provinces (476, 29, 362 and 84 households respectively) (Table 4.6).

Table 4.6: Cattle Herd Size Distribution by Province as at January 2018

Province	Number of Households										
	1 - 5 Heads	6 - 10 Heads	11 - 15 Heads	16 - 20 Heads	21 - 30 Heads	31 - 40 Heads	41 - 50 Heads	51 - 60 Heads	61 - 100 Heads	101 - 150 Heads	Above 150 Heads

4.4.4 Goat Herd size

Most households (271,872) that raised goats had a herd size of between 1–5 heads as at January 2018. Herd sizes greater than 30 heads were only found in 10,000 households in the country. Southern Province had the largest number of households (50,964) raising

between 1–5 goats representing 18.7 percent. Western province had the smallest number of households (8,352) with a flock size ranging between 1–5 goats representing 3 percent.

Southern Province had the highest number of Households with a flock size of over 50 heads (1,309 households) (Table 4.7).

Table 4.7: Goat Herd Size Distribution by Province as at January 2018

Province	Number of Goat Raising Households

4.4.5 Sheep Herd size

Most households (11,941) had a flock size of between 1-5 sheep (table 4.7). Only a small number of households (681) raised more than

30 sheep. Eastern and Southern Provinces had the largest number of households with a flock size ranging between 1-5 sheep. Western province had 97 households that raised 1-5 heads per household.

Table 4.8: Sheep Herd Size Distribution by Province as at January 2018

Province	Number of Sheep Raising Households									
	1-5 Heads	6-10 Heads	11-15 Heads	16-20 Heads	21-30 Heads	31-40 Heads	41-50 Heads	51-60 Heads	61-100 Heads	101-150 Heads

4.4.6 Pig Herd Size

A total of 178,848 households raised pigs as at January, 2018. The highest number of households (116,080) had between 1 and 5 pigs. Pig raising households with over 150 pigs were 140 in the country.

Lusaka and Copperbelt Provinces had the highest proportion of households with a herd size of over 50 pigs (190 and 260 households respectively) (Table 4.9).

Table 4.9: Distribution of Pig raising Households by Pig herd size as at January 2018

4.5 Poultry Production

4.5. 1 Chicken Population

The Village Chicken population from both Household and Establishment was 15,391,150 as at January 2018. Southern Province accounted for the highest number (3,157,432), at 20.5 percent of the total national stock, followed by Central Province at 17.1 percent. North-Western Province accounted for the lowest percentage at 4.9 percent (Table 4.10). The contribution from establishments was very small in all Provinces.

The Broiler population from both Household and Establishment was 6,769,921 as at January, 2018 of which Lusaka Province accounted for the highest number (2,554,752), at 37.7 percent of the total national stock, followed by Copperbelt

Province at 27.8 percent. Western Province accounted for the lowest proportion of broiler population at 0.5 percent. Establishments made a considerable contribution in Central, Lusaka, Copperbelt, Southern and Eastern Provinces. The Establishment contribution from other provinces was very small (Table 4.10).

The Layer population from both Household and Establishment was 1,672,954. Lusaka Province account for the highest percentage of 52.3% of the total national stock, followed by Central Province at 22.2 percent. Luapula Province accounted for the lowest at 0.3 percent of the total national stock. The Number of layers from Establishments was greater than the layers from households (929,973 against 742,981 respectively). Establishments contributed above 50 percent of the layers in Lusaka province (Table 4.10).

4.6 Dogs and Cats Population

4.6.1 The Dog Population

The Dog population as at January 2018 from both Household and Establishment was 968,372. Of the national total, Southern

Province accounted for the highest number (229,886), at 23.7 percent, followed by Central Province at 16.7 percent. Luapula Province had the lowest dog population at 2.3 percent. The contribution from establishments at National and provincial levels were very small.

Table 4.11: Numbers of Dogs Raised by Province as at January 2018

Province	From Estab	From HH	Total	Percent
Central	658	161,175	161,833	16.7

Donkeys	13,967

Chapter 5: Honey Production

This chapter highlights the results of the 2017 production year on: bee keeping, honey production and sales in Zambia as recorded in the 2017/2018 Livestock and Aquaculture census.

5.1 Types of beehives kept by Households

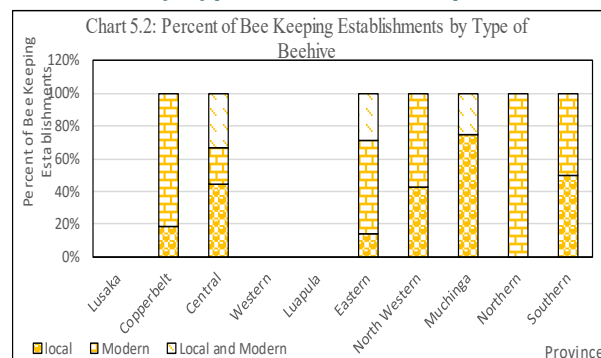

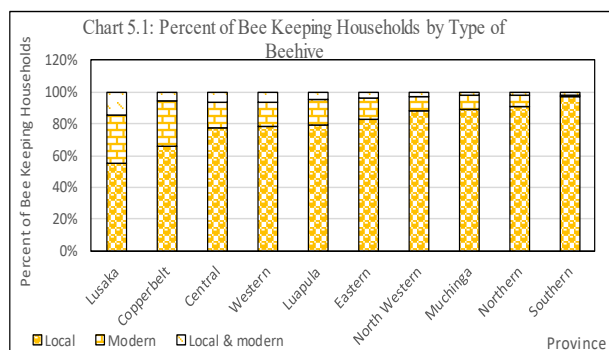

Table 5.1 shows the percentage of households and Establishment by types of beehives

as at January 2018. Of 37,082 bee keeping households in the country, 83% used the local type, while 13.1% used the modern beehives and 4% used a combination of the local and modern beehives. The most common beehive type used by establishments was the modern beehive at 54.3%, followed by the local beehive at 32.6% and a combination of Local and Modern beehive at 13%.

Table 5.1: Bee Keeping Households and Establishment by type of bee hive and Province as January 2018

Figure 5.1 and 5.2 Percent of Households and Establishments by Type of beehive and province

5.2 Number of beehives

The number of beehives country wide was 802,385 as at January 2018 (Table 5.2). North Western Province had the highest number of beehives 553,095 (68.9% of the national total), followed by Eastern Province with 81,051 (10.1%) and Muchinga Province with 75,199

(9.4%). Luapula Province had the lowest number of beehives 556 (0.1%). Out of the total beehives in the country 487,270 (60.7%) were colonized. North Western Province recorded the highest number of colonized beehives of 309,890 while Luapula Province had the least with 411. On average, each bee keeping household had 22 Beehives (Table 5.2)

Table 5.2: Distribution of number of beehives by Household, Establishment and province as at January 2018

Province	Number of beehives owned

5.3 Comb Honey production and sales

5.3.1 Quantity of Comb Honey Produced

Table 5.3 shows that a total of 9,014.2 tonnes of comb honey were produced country wide during the 2017 production year. North-Western

Province produced the largest quantity of comb honey amounting to 4,228 tonnes (46.9 % of the total national comb honey produced) followed by Eastern Province which produced 1,723 tonnes (representing 19.1 % of the national total comb honey). Of the total 9,014 tonnes produced, 4,671 tonnes (51%) were sold.

Table 5.3: Quantity of Comb Honey Produced and Sold by Province in 2017

Province	Comb Honey Production (MTs)		Comb Honey Sold (MTs)

Chapter 6: Fish Farming

This chapter covers data collected from households and establishments that reported to have been engaged in fish farming. At household level, data collected ranges from number of households engaged in fish farming, gender of household head, and source of water for fish farming facility to challenges faced in fish farming. As for establishments, information pertaining to the fish farming facility and production details were collected as well as the management aspects of their fish farming business.

6.1 Number of Households and Establishment Involved in Fish Farming

Table 6.1 shows that a total of 9,615 households and 126 establishments were involved in fish farming countrywide as at January 2018. Out of the total 9,615 households involved in fish farming, Northern Province had the highest proportion, 33.9 percent. Northern Province also had the highest proportion of Establishments involved in fish production at 19.8 percent.

Table 6.1: Distribution of Fish Farming households and Establishment by Province as at January 2018

Province	Households		Establishment	
	Number	Percent	Number	Percent
Central	463	4.8	9	7.1
Copperbelt	902	9.4	14	11.1

6.2 Facilities used for Fish farming

Table 6.2 shows that households had 35,744 Fish Farming Facilities and out of this number 18,213 were stocked. Establishments had 4,050 stocked facilities. In total there were 22,263 stocked fish farming facilities in the country. The average number of fish farming facilities per household and establishment was 4 and 32 respectively.

Further, information on the number of stocked facilities in Table 6.2 reveals that ponds were the most used fish farming facility (18,582) at 83.5% followed by tanks (2,567) at 11.5 percent, dams (796) at 3.6 percent and cages (314) at 1.4 percent of the total number of fish farming households (Table 6.2).

Table 6.2: Distribution of fish Farming Facilities as at January 2018

Fish farming facility	From Household					From Establishments		Total Stocked Facilities	
	Stocked & Unstocked facilities		Stocked facilities		Percent of stocked area	Stocked Facilities			
	Number	Area/ Volume (m2/m3)	Number	Area/ Volume (m2/m3)		Number	Area/ Volume Stocked (m2/m3)	Number	%

Total	35,744		18,213			4,050		22,263	100

The highest number of fish farming facilities as shown in table 6.3 were recorded in Lusaka Province constituting mainly of fish ponds (9,769) and Recirculation Tanks (2,521)

followed by Northern Province using 8,254 fish ponds and 305 dams. The lowest number of fish farming facilities were reported in Western Province.

Table 6.3: Distribution of facilities used in fish farming by Province as at January 2018

Chart 6.1 below indicates that the most common source of water for fish farming were streams or rivers supplying water to 65 percent and 61 percent facilities at household and establishment levels, respectively. Springs and Swamps/dambos were the next most common water source for fish farming for households at

10 percent and 9 percent, respectively. Lakes and springs were the next most important water source for Establishments at 11 percent and 9 percent, respectively. Lakes, Dams and Water Utility companies were among the least fish farming water sources for both households and establishments.

Figure 6.1: Water Source for Fish Farming facilities

6.3 Type of Fish Produced by Households and Establishment

At household level, table sized fish producers were prominent accounting for 71 percent followed by those producing a combination of table-size and fingerlings (21 percent) and

fingerling producers (7.7 percent). Out of 126 establishments covered, the majority (42.9 percent) produced both table sized fish and fingerlings followed by those producing table sized fish only (41.3 percent) and the least were fingerlings producers accounting for 15.9 percent.

Table 6.4: Number and Percentage of Households and Establishments by Type of Fish Produced as at January 2018

Type of Fish	Households		Establishment		Total	
	Number	Percent	Number	Percent	Number	Percent

6.4 Quantity of fish harvested and sold

6.4.1 Quantity of Fish Harvested by Households and Establishment

Table 6.5 shows the quantity of fish produced in each province in 2017 from both Households and Establishments. A total of 21,567.1 metric tonnes of fish were produced out of which establishments contributed 15,997 metric tonnes (74 percent of total production) while households contributed 5,570 metric tonnes.

At Household level, Northern Province contributed the highest quantity of 2,118.5 metric tonnes representing 38 percent of the total household production followed by Luapula and Lusaka Provinces at 15.1 percent and 11.5 percent, respectively. The lowest production at household level was recorded in Eastern Province (30.6 metric tonnes) accounting for 0.5 percent of the total household production.

The highest production from establishments was recorded in Southern Province accounting for 76.1 percent of total establishment production followed by Lusaka Province and Northern Province at 8.4 percent and 7.3 percent, respectively (Table 6.5).

Table 6.5: Fish production by province in 2017

Province	Households		Establishments		Total	
	MT	(%)	MT	(%)	(MT)	(%)
Central	237.4	4.3	0.9	0	238.3	1.1
Copperbelt	411.7	7.4	881.1	5.5	1,292.70	6
Eastern	30.6	0.5	0.4	0	31	0.1
Luapula	843	15.1	0.8	0	843.8	3.9
Lusaka	641.9	11.5	1,341.90	8.4	1,983.80	9.2
Muchinga	571	10.3	403.3	2.5	974.3	4.5
Northern	2,118.50	38	1,173.50	7.3	3,291.90	15.3
North Western	493.6	8.9	28	0.2	521.7	2.4
Southern	171.3	3.1	12,167.30	76.1	12,338.60	57.2
Western	51	0.9	-		51	0.2
Zambia	5,570.00	100	15,997.00	100	21,567.10	100

6.4.2 Quantity of Fish Species Harvested by Households and Establishment

The major fish species raised in aquaculture in Zambia were bream (Nile Tilapia, Three Spotted tilapia, Green headed tilapia, Tanganyika bream

and Red Breasted tilapia), Carp fish and Cat fish (table 6.6).

Table 6.6: Fish Production by Species for Households and Establishments in 2017

Fish Species	Households		Establishment		Total	
	(MT)	(Percent)	(MT)	(Percent)	(MT)	(Percent)
Three spotted tilapia	407	7.3	1,646.60	10.3	2,053.60	9.5
Green headed tilapia	1,793.50	32.2	9.5	0.1	1,802.90	8.4
Red breasted tilapia	1,087.20	19.5	3	0	1,090.20	5.1
Nile tilapia	742.5	13.3	14,132.90	88.3	14,875.30	69
Carp fish	94.7	1.7	5	0	99.7	0.5
Cat fish	5.9	0.1	-	0	5.9	0
Tanganyika Bream	1,439.30	25.8	200.1	1.3	1,639.50	7.6
Zambia	5,570.00	100	15,997.00	100	21,567.10	100

Green headed tilapia was the most common fish species produced at household level accounting for 32.2 percent of the household production as indicated by table 6.6. The second and third most important were Tanganyika bream and Red breasted bream representing 25.8 percent and 19.5 percent of the total fish farming production, respectively.

At Establishment level, the major fish species produced was Nile Tilapia accounting for 88.3 percent of total production of 15,997 Metric Tonnes. The second most important species was the Three Spotted Tilapia at 10.3 percent.

Overall, Nile Tilapia was the most produced fish species in Zambia at 69.0 percent of the total production of 21,567.1 Metric Tonnes. The second, third and fourth species were Three spotted tilapia, Green headed tilapia and Tanganyika bream accounting for 9.5 percent, 8.4 percent and 7.6 percent, respectively (Table 6.6).

List of Key Persons involved in the Analysis and Report writing

Main Authors & Census Coordinators

Nyembe Misheck
Principal Economist (MFL)

Dr. Mataa Liywalii
Principal Veterinary Research Officer (MFL)

Other Authors

Mweemba Chijoka
Senior Statistician (MFL)

Likezo Musobani
Senior Statistician (CSO)

Andrew Chongwe
Acting Principal Livestock Production Officer (MFL)

Loziwe Njobvu
Senior Fisheries Research Officer (MFL)

Dr. Fusya Goma
Senior Epidemiologist (MFL)

Dr. Clive Simwanza
Registrar-Animal Identification & Traceability (MFL)

Data Analysts

Ben Mwale
ICT Data Analyst (CSO)

Tabo Simutanyi
Systems Analyst (CSO)

Likezo Musobani
Senior Statistician (CSO)

Masiliso Sooka
Senior Statistician (CSO)

Typesetting and Copy Editing

Anthony Nkole
Desktop Publishing Officer (CSO)
