2023 LIVESTOCK SURVEY REPORT

REPUBLIC OF ZAMBIA

MINISTRY OF FISHERIES
AND LIVESTOCK

2023 LIVESTOCK SURVEY REPORT

August 2024

Preface

In pursuit of evidence-based planning, monitoring, and evaluation, the Government of the Republic of Zambia has prioritized the importance of quality statistics. Livestock statistics, among other key indicators, play a crucial role in analysing sector performance and assessing contributions to the National Gross Domestic Product (GDP). Accurate and up-to-date statistics therefore, are essential for informed decision-making and for reporting on various national and international frameworks such as the **Sustainable Development Goals, the Malabo Declaration, the National Agricultural Investment Plans (NAIP), Vision 2030 and National Development Plans.**

The 2023 Livestock survey report is the third (3rd) in the series of surveys following the Livestock and Aquaculture Census of 2017/18 and the Livestock Survey of 2022 that have been produced in the past. The Government conducted the 2023 Livestock Survey, to reaffirm its commitment to maintaining updated livestock information as a top priority. The objective of this report is to compile key livestock statistics for purposes of sharing performance trends in livestock development so as to inform operational policy making. It provides more insights on how the sector has performed towards the target of achieving seven (7) million cattle by the year 2027. This report remains critical in providing the much-needed information to inform the aforementioned trajectory.

We are confident that the results and recommendations contained in this report will not only gauge the economic performance of the livestock sub-sector but also contribute to better informed policies, programmes and practices. This report will also serve as feedback to ascertain whether actions in the livestock subsector and beyond are successful in improving livestock development in the country. Ultimately, these findings will empower policymakers to allocate resources effectively, justify investments, and foster the development of the livestock industry.

We therefore urge all readers to interrogate the findings in this report, not only as a national report but to contextualise the findings to their local circumstances. We thank all our Partners for the invaluable support towards the compilation, analysis and reporting on the performance of the livestock subsector.

Hon. Peter C. Kapala, MP
**MINISTER OF FISHERIES AND
LIVESTOCK**

Hon. Dr. Situmbeko Musokotwane, MP
**MINISTER OF FINANCE AND NATIONAL
PLANNING**

August, 2024

Acknowledgements

The Ministry of Fisheries and Livestock (MFL) is tasked with overseeing the development and management of the fisheries and livestock sub sectors in Zambia, with the aim of contributing to sustainable food security, nutrition, and income generation. Despite ongoing interventions to improve production and productivity, accurate and comprehensive statistics have remained elusive, hindering informed decision-making and assessment of sectoral contributions to various socio-economic indicators. To address this challenge, the Government allocated funds in the 2023 Budget to support the implementation of a Livestock Survey, conducted nationwide. Conducting the Livestock Survey is always a collaborative effort that draws participation from the **Ministry of Fisheries and Livestock, at the national, provincial and district levels, the Zambia Statistics Agency and the Indaba Agricultural Policy Research Institute (IAPRI).**

This report is one of the many outputs resulting from this collaboration. Without contribution from these institutions, the statistics generated, from which the information presented in this report was derived, would not have been possible. Special appreciations are extended to IAPRI for their invaluable contribution to this endeavour; **Technical staff of the Ministry of Fisheries and Livestock; and Zambia Statistics Agency**, for their dedication in producing high quality statistics. Finally, we would like to acknowledge and appreciate the role of all Officers who validated the contents of the report and thereby contributing to its accomplishment.

It is hoped that the insights provided in this report will enhance decision-making and policy formulation in the fisheries and livestock sector.

Eng. Himba Cheelo (Ms.)
Permanent Secretary

Statement by the Statistician General

The Zambia Statistics Agency was established in 2018 under the **Statistics Act No. 13 of 2018** as the sole designated entity responsible for the publication of official statistics in the country. The Agency is also responsible for the development and coordination of an **Integrated National Statistical System**. The Agency is required to provide for the production and compilation of official statistics in a transparent and impartial manner.

It is against the above background that the Ministry of Fisheries and Livestock collaborated with Zambia Statistics Agency in conducting the 2023 Livestock Survey. The 2023 Livestock Survey used sound methodology and internationally accepted fundamental principles for the production of official statistics. It was designed to provide livestock estimates at national and provincial levels. The survey collected information on livestock-raising household characteristics, livestock production, poultry production, animal reproduction and management, milk production and honey production.

The information in this report is useful to policy makers, researchers, programme managers and other data users for the development of the livestock industry and the entire Zambian economy. Any other data concerning the 2023 Livestock Survey not provided, and any specialized tabulations can be made available to users upon request.

Goodson Sinyenga
Statistician General

TABLE OF CONTENTS

Preface	iv
Acknowledgements	v
Statement by the Statistician General	vi
List of Acronyms	xvi
Executive Summary	xvii
Chapter One: Background	1
1.0 Background	1
1.1 Introduction	1
1.2 Objectives of the Survey	2
2.0. Introduction	3
2.1. General Concepts and Definitions	3
Chapter Two: Concepts and Definitions	3
3.1. Sample Design and Coverage	6
3.2. Sample Stratification and Allocation	6
Chapter Three: Survey Methodology and Organization	6
3.3. Coverage	7
3.4. Selection of Households	7
3.5. Estimation procedure and sampling weights	8
3.6. Non-Response Adjustment	9
3.7 Limitations	9
Chapter Four: Demographic Characteristics of Households	11
4.0 Introduction	11
4.1.1. Distribution of Households	11
4.1.2 Distribution of Agricultural Households by Activity	12
4.1.3 Distribution of Livestock Raising Households by Sex of Household Head	12
4.1.4 Age Group and Sex of Household Head of Livestock/Poultry Households	13
4.1.5 Distribution of Household Heads by Sex and Broad Age Group, 2023	14
4.1.6 Distribution of Household Members by Sex and Broad Age Group	14
4.1.7 Distribution of Household Heads by Marital Status	15
4.1.8 Summary Distribution of Household Heads by level of Education Completed	15
4.1.9 Detailed Distribution of Livestock/Poultry Raising Household Heads by level of Education Completed, 2023	16
4.1.10 Average Size of Livestock/Poultry Raising Households	17

Chapter Five: Livestock Production and Management	18
5.0. Introduction	18
5.1 Livestock Production	18
5.1.1 Households Raising Various Types of Livestock	18
5.1.2 Purpose of Raising Livestock by Number of Households	19
5.2 Cattle Production	19
5.2.1 Opening and Closing Stock of Cattle for Households and Establishments	19
5.2.2 Number of Cattle Raised by Households and Establishments	20
5.2.3 Cattle Herd Structure under Households	20
5.2.4 Average Number of Cattle Raised per Household and Establishment	21
5.2.5 Cattle-raising Households by Size of Herd Raised, 2023.	21
5.2.6 Number of Cattle raised by Sex	22
5.2.7 Number of Cattle Owned by Households	22
5.2.8 Number of Cattle Slaughtered by Households and Establishments	23
5.3.9 Number of Cattle Sold Live by Households and Establishments	24
5.2.10 Calving Percentage	25
5.3 Goat Production	25
5.3.1 Opening and Closing Stock of Goats for Households and Establishments	25
5.3.2 Number of Goats Raised by Households and Establishments	26
5.3.3 Number of Goats raised in Households by Sex	26
5.3.4 Average Number of Goats raised per Household and Establishment	26
5.3.5 Percentage of Goat-raising Households by Herd Size	27
5.3.6 Number of Goats Owned by Households and Female Members of Households	28
5.3.7 Number of Goats Slaughtered by Households and Establishments	28
5.3.8 Number of Goats sold live by Households and Establishments	29
5.4 Sheep Production	30
5.4.1 Opening and Closing Stock of Sheep for Households and Establishments	30
5.4.2 Number of Sheep Raised by Households and Establishments	30
5.4.3 Number of Sheep raised by Sex under Households	31
5.4.4 Average Number of Sheep Raised Per Household and Establishment	31
5.4.5 Percentage of Sheep-raising Households by Herd Size, 2023	32
5.4.6 Number of Sheep Owned by Households and Female Members of Households	32
5.3.7 Number of Sheep Slaughtered by Households and Establishments	33
5.4.8 Number of Sheep sold live by Households and Establishments	34
5.5 Pig Production	34
5.5.1 Opening and Closing Stock of Pigs for Households and Establishments	34
5.5.2 Number of Pigs Raised by Households and Establishments	35
5.5.3 Number of Pigs Raised under Households by Sex	35
5.5.4 Average Number of Pigs Raised per Household and Establishment	36
5.5.5 Percentage of Pig-raising Households by Size of Herd Raised	36
5.5.6 Number of Pigs Owned by Households and Female Members of Households	37

5.5.7 Number of Pigs slaughtered by Households and Establishments	38
5.5.8 Number of Pigs Sold Live by Households and Establishments	38
5.6 Other Animal Species	39
5.6.1 Dogs	39
5.6.2 Cats	40
5.7 Livestock Management	40
5.7.1 Fencing of Livestock Holding	40
5.7.2 Livestock Record Keeping	41
5.7.3 Households and Establishments Practicing Supplementary Feeding, 2023.	41
5.7.4 Type of Feed used by Households	42
5.7.5 Sources of Water	43
5.7.6 Distance to Nearest Source of Water	43
5.7.7 Access to Livestock Production Extension Services	44
5.7.8 Animal Health Extension Services by Province	45
5.7.9 Tick Control Methods by Households	45
5.8 Major Constraints in Livestock Production	46
5.8.1 Major Constraints in Raising Cattle	46
5.8.2 Major Constraints in Raising Goats	46
5.8.3 Major Constraints in Raising Sheep	47
5.8.4 Major Constraints in Raising Pigs	47
5.8.5 Major Constraints in Raising Donkeys	48
5.8.6 Livestock Theft	48
Chapter Six: Animal Reproduction and Health	49
6.1 Households Engaging in Reproduction Practices for Cattle	49
6.2 Number of Households involved in Vaccination against Selected Diseases	50
6.3 Vaccinations against Selected Livestock Diseases	51
6.4 Major Diseases Affecting Livestock	53
Chapter Seven: Animal Draught Power	56
7.1 Number of households using Animal Draught Power	56
7.2 Purpose of Animal Draught Power	57
Chapter Eight: Milk Production and Sales (Fresh and Sour)	58
8.1: Milk Production in Litres by Households and Establishments by Province	58
8.2: Milk Production from Households	59
8.3: Milk Production from Establishments	65

Chapter Nine: Poultry Production	67
9.1 Number of Various Types of Poultry Raised by Households	67
9.2 Number of Households raising Various Types of Chickens	67
9.3. Chicken Population	68
9.3.1 Number of Village Chickens Raised by Households and Establishments	68
9.3.2 Number of Broiler Chickens Raised by Households and Establishments	69
9.3.3 Number of Layer Chickens Raised by Households and Establishments	69
9.4 Average Number of Chickens Raised Per household	70
9.5 Chicken Ownership by Female Members of the Household	70
9.5.1 Village Chicken Ownership by Female Members of Household	70
9.5.2 Broiler Chicken Ownership by Female Members of Households	71
9.5.3 Layer Chicken Ownership by Female Members of Households	72
9.6 Other Poultry	72
9.7 Major Constraints Affecting Poultry Production	75
Chapter Ten: Egg Production and Sales from Households	77
10.1 Households Engaged in Egg Production	77
10.2 The Main Purpose of Producing Eggs	77
10.3 Reproductivity Parameters of Village Chickens	78
10.4 Main Decision Making in Relation to the Sale of Eggs	79
Chapter Eleven: Forage Production	80
11.1 Number of Households and Establishments Involved in Forage Production	80
11.2 Land size used for growing forage by households and establishments	80
11.3 Type of forage grown by Households	81
11.4 Forage utilization by Households	83
Chapter Twelve: Honey Production and Sales	84
12.1 Households Involved in Honey Production	84
12.2 Comb Honey Produced by Households and Establishments	84
12.3 Comb Honey Sold by Households and Establishments	85
12.4 Major Buyers of Comb Honey	86
12.5 Major Constraints in Honey Production Experienced by Households	87
12.6 Major Constraints in Honey Production Experienced by Establishments	88

EXECUTIVE SUMMARY

The Ministry of Fisheries and Livestock is mandated to develop and manage the fisheries and livestock subsector to contribute to sustainable food, nutritional security and income generation. In the recent past, the Government has continued to implement several interventions aimed at improving fisheries and livestock production and productivity in line with the aspirations of the Eight National Development Plan (8NDP) and the Vision 2030. To fulfil its key mandate of improving livestock production and productivity, the notable programmes that are being implemented include livestock stocking and restocking using improved livestock breeds, promotion of forage and fodder production and utilization, improved livestock infrastructure and improved livestock disease control. Despite these interventions, the livestock sub sector still faces a number of disease outbreaks and other challenges throughout the country which has negatively affected its growth.

The situation thus requires regular updating of livestock statistics to guide policy decisions. Therefore, in order to be able to provide accurate, reliable and comprehensive livestock production and productivity statistics, surveys must be regularly conducted to substantiate the growth of the sub-sector. The 2017/18 Livestock and Aquaculture Census (2017/18 LAC) and the 2022 Livestock Survey Reports conducted for both households and establishments (commercial entities) gave a current situation overview of the livestock status in the country. This report gives a description of the Livestock Sub-Sector as at 30th April, 2023.

A total of 1,875,298 households were engaged in livestock-raising (this included livestock, poultry, honey and forage) as at 30th April 2023 which included honey and fodder production. Overall, 72.1 percent of livestock-raising household heads were married, monogamously (68.2%) and polygamously (3.9%), and 5.8 percent were not married. Meanwhile, 12.1 percent were widowed and 6.3 percent divorced. From the total 1,875,298 livestock-raising household heads 1,390,283 were male-headed accounting for 74.1% and 485,015 were female-headed (25.9%). Youth-headed households comprising the age group 15-35 years, made up 38.5 percent of the total number of members of livestock-raising households. Meanwhile, the adult population represented 24.7 percent. In the case of sex against age, the household heads with the age range of 15 to 35 years topped among the male-headed households raising livestock at 82.2 percent while female-headed households raising livestock were at 17.8 percent. Overall, 53.5 percent of the household heads raising livestock had completed primary education and 3.5 percent had tertiary education.

The total number of livestock and/ or poultry-raising households stood at 1,849,463. Out of the total number of livestock and/ or poultry-raising households recorded, 535,371 households were involved in cattle rearing. Southern Province had the highest contribution to this national total accounting 31.5 percent of the Cattle-raising households. With regard to Goat-raising, 723,740 households were recorded with Southern Province accounting for the highest percentage at 27.9 percent. A total of 271,474 households were recorded to be involved in Pig-raising with the highest percentage of households coming from Southern Province (26.3%). There were 42,653 households rearing sheep in the country of which the majority, 42.9 percent were from Southern Province. Donkeys were raised by a total of 5,601 households countrywide. Southern Province had the highest contribution of donkey-raising households at 58.4 percent.

Disease was reported as the major constraint faced by livestock and poultry raising households. The Cattle population was 5,115,495, Goats (5,568,730), Sheep (308,354) and Pigs (1,613,248) as at 30th April, 2023. Meanwhile, the Dog and Cat population stood at 1,007,659 and 338,405, respectively.

A total 290,827,428 Litres of milk was produced by both households and establishments, with households contributing a major share, 234,118,524 litres. At provincial level, the highest quantity of milk produced was reported from Southern Province at 97,718,009 Litres followed by Copperbelt and Central at 84,520,262 litres and 58,851,519 litres respectively while Luapula was lowest at 20,756 litres.

The total number of households that raised Village Chickens was 1,682,160. Broiler and Layer Chicken-raising household stood at 46,927 and 21,105 respectively. The Village Chicken population from both Household and Establishment was estimated at 26,162,649 as at 30th April 2023. Southern Province reported the highest number at 5,267,171 (20.1%) of the total national stock. The Broiler Chicken population from both Household and Establishment was 5,325,381 as at 30th April, 2023. Lusaka Province recorded the highest number at 2,680,661 (50.3 %). The Layer Chicken population from both Household and Establishment was 2,127,690 and North-Western Province accounted for the highest percentage of 30.0 percent.

A total of 56,899 households were involved in forage production during the reference period. Among provinces, Central reported the highest percentage of forage producing households at 32.7 percent followed by North-western at 18.6 percent. A total 170,115 hectares of land was cultivated by households and Central Province reported the largest cultivated land for forage production at 103,671 hectares.

A total of 44,003 households were involved in honey production. Among the provinces, Copperbelt Province recorded the highest percentage of Households at 25.1 percent. Meanwhile, 14,718.4 metric tonnes of honey were produced by households. Among the provinces, North-western contributed the highest percentage of comb honey produced by households at 38.8 percent (5,836.8 metric tonnes). Most households reported that the severe major-constraint they faced in honey production was pests at 26.3 percent.

Chapter One: BACKGROUND

1.0 Background

The Government of the Republic of Zambia through the Zambia Statistics Agency (ZamStats) conducts various censuses and sample surveys to produce comprehensive official statistics across sectors including agriculture. Zambia's agricultural sector encompasses crop, livestock and fish production. While detailed information on crop production is widely available, data on the contributions of livestock, fisheries, and honey to the national economy is limited.

It is worth noting that agricultural censuses have been conducted since independence, with the first in the 1970/1971 agricultural season and the second in the 1991/1992 agricultural season. These censuses provided comprehensive agricultural statistics, which were primarily focused on crop production. However, recognizing the need for accurate information on livestock and aquaculture, the 2017/18 Livestock and Aquaculture Census was conducted to address this gap.

Since then, significant changes have occurred in livestock and aquaculture parameters, necessitating an update to facilitate effective policy formulation based on current data. Further, the 2022 Livestock Survey was conducted to assess trends and to take livestock inventory. Due to growing demand for information on livestock production and productivity for various policy reasons, the Government has continued to support the collection of Livestock statistics data hence the 2023 Livestock Survey.

1.1 Introduction

The Zambian economy has seen notable growth across key sectors, particularly in Livestock as it plays a pivotal role in the livelihoods of many. Livestock serves as a crucial source of food, income, draught power, and possesses aesthetic value. Presently, the livestock sub-sector contributes 3.2% to the national GDP and 42% to the agricultural GDP, with the potential to drive agricultural-led growth and socioeconomic transformation as outlined in the **Eighth National Development Plan (8NDP), sustainable Development Goals (SDGs) and Vision 2030**.

In alignment with the goals of the strategic direction in the 8NDP and Vision 2030, the Ministry of Fisheries and Livestock is mandated with overseeing the development and management of the fisheries and livestock subsector in order to realize sustainable food security, nutrition and income generation. In doing so, the government has implemented various initiatives to enhance among other priorities, livestock production

and productivity. Key programs include livestock stocking and restocking with improved breeds, promotion of forage and fodder production, infrastructure improvements, and disease control measures. Despite these efforts, the livestock subsector continues to face challenges such as disease outbreaks nationwide. This has not only affected the growth in the livestock population but also the availability of livestock and livestock products to satisfy the high demand on the regional and international market.

As a result, statistics play a crucial role in informing policy decisions. Therefore, it is essential to provide accurate, reliable and comprehensive statistics regularly to aid policy formulation, programme planning and monitoring and evaluation. Following the baseline statistics provided in the 2017/18 Fisheries and Livestock census on the livestock status in the country, the 2023 survey was conducted to validate the accuracy of the administrative data, track progress in the livestock population, and to update the existing information for evidence-based decision-making. These results will also be used to monitor progress on the implementation towards the achievement of the 8NDP, Sustainable Development Goals and Vision 2030.

1.2 Objectives of the Survey

The overall objective is to collect up-to-date estimates of basic demographics and livestock statistics that will be used to guide policy formulation; support cooperating partners; and the private sector decisions regarding investments and the development of the sector.

Specifically, the survey seeks to determine the following:

- The number of households and establishments participating in livestock and poultry raising as well as honey production
- Population changes for major livestock species
- The livestock productivity levels in Zambia
- Population of poultry in the country
- The herd-structure for the major livestock species in the country
- The number of slaughters for the major livestock
- The livestock reproduction and management practices applied by the households in raising the livestock;
- Milk production from households and establishments
- The major challenges affecting livestock and poultry production in Zambia;
- Forage production from households and establishments
- The number of eggs produced by households
- The quantity of honey produced by households and establishments
- The number of households engaged in raising major livestock breeds
- Provide data for measuring key economic performance indicators such Gross Value Added (GDP) and its contribution to the economy
- Provide statistics which can be used to determine the deficit or surplus status of the different types of livestock raised in Zambia
- Provide information to be used as a basis for determining the export potential of the country with regard to livestock products

Chapter Two: CONCEPTS AND DEFINITIONS

2.0. Introduction

The following concepts and definitions are as articulated by the Ministry of Fisheries and Livestock (MFL) in collaboration with Zambia Statistics Agency during the Livestock Survey of 2023.

2.1. General Concepts and Definitions

Adult member:	A member of the household who is 12 years or older.
Aesthetic Value:	The enjoyment of beauty or display of great beauty of something.
Agricultural Activity:	The growing of any crop and/or raising of livestock, raising of poultry and/or fish farming.
Agricultural Household:	A household in which at least one member is carrying out some agricultural activity.
Agricultural Marketing Season:	Zambia's marketing season starts from 1st May of a given year to 30th April of the following year.
Animal draught power:	Energy to do work, derived from domesticated/trained animals, e.g. oxen, donkeys etc.
Animal manure:	All forms of livestock manure e.g., chicken droppings, cattle dung etc.
Artificial Insemination:	It is the process of collecting sperm cells from a male animal and manually depositing them into the reproductive tract of a female. It is used as an alternative to natural mating.
Bulls:	Uncastrated adult male cattle.
Calves:	Young male or female cattle that are not yet weaned.
Cats:	A small domesticated carnivorous mammal with soft fur, a short snout and retractable claws widely kept as a pet.
Chickens (Broilers):	Exotic chickens raised mainly for meat.
Chickens (Layers):	Exotic chickens raised mainly for egg production.
Controlled mating:	The animals are mated in such a way that the offspring can be guaranteed to be the progeny of the animals concerned, the number of matings can be counted and the use of the animals for breeding is controlled
Cows:	Female cattle that have given birth at least once. Include female cattle that have not yet given birth but are beyond the stage of being termed heifers.

Crop production:	The growing of field crops such as maize, millet, cassava etc. The crops of interest in this survey are maize, rice, sorghum, sunflower, soya beans, groundnuts, sweet potatoes and cassava.
Demographics:	Statistical data relating to the population and particular groups within it.
Dipping:	A method of tick control which involves the plunging of the animal into the Plunge Dip containing a mixture of water and an acaricide.
Doe:	mature female breeding goat. Also known as nanny goat.
Dogs:	A domesticated carnivorous mammal with non-retractable claws widely kept as a pet, for guarding or hunting.
Donkey:	An animal which is similar to a horse but is smaller and has longer ears.
Ducks:	These are mostly water birds, smaller in size than geese and are found both in fresh water and sea water.
Establishment:	A business or other organization, or the place where an organization operates.
Exotic livestock:	Non-indigenous species of domesticated livestock e.g. brahman, boran, black astrolopes, kroilers and sasols.
Guinea fowl:	Large speckled grey African bird that is often eaten as meat.
Guinea pig:	Small furry animal without a tail.
Hand dressing:	Removing ticks using the application of tick grease on the body of an animal.
Head of Household:	A person who is considered to be the head by the members of the household.
Heifers:	Female cattle that have not yet given birth and have not reached the stage of being termed cows.
Herd:	A large group of animals, especially hoofed mammals, which live together or are kept together as livestock.
Holding:	Land wholly or partly operated for agricultural purposes such as growing crops, fish farming and/or raising livestock and/or raising poultry for production under single technical management. A holding may consist of one or more activities listed above in one or separate areas.
Livestock:	All domesticated animals that are used/may be used for food and agriculture purposes such as cattle, pigs, goats, sheep and poultry.
Livestock	Activity: the raising of livestock.
Livestock extension:	Support services rendered to farmers with regards to improved methods of raising livestock e.g. Educating farmers on animal health services, livestock feeding practice, or animal housing etc.
Livestock Household:	A household engaged in any livestock activity. For the 2023 livestock survey, this definition includes a household involved in Honey Production.
Livestock Management:	All activities pertaining to the control and organization of livestock production.
Livestock Production:	All activities pertaining to the raising of all types of livestock.
Oxen:	Castrated male cattle. Not all oxen are trained as draught power animals.
Pigeons:	Birds usually white/grey in colour mostly kept at home.
Poultry:	All domesticated fowls such as chickens, ducks, geese, pigeons, guinea fowls, turkeys and quails. Poultry also includes rabbits.

Poultry production:	All activities pertaining to the raising of all types of fowls including rabbits.
Pour-on:	Is a method of tick control which involves the applying of acaricide on the skin and hair along the back of an animal.
Quails:	A small bird, essentially streaked brown with a white eye stripe and has long wings.
Rabbit:	A burrowing mammal with long ears and a short tail.
Ram:	Mature male breeding sheep.
Sheep:	Include ram, ewe and lambs.
Sire:	The male parent of an animal, kept for breeding.
Spraying:	The application of a chemical (acaricide) using a sprayer or a spray race.
Turkey:	A large bird of the genus Meleagris.
Vaccination:	Administration of vaccines in order to prevent diseases.
Vaccine:	A preparation administered to an animal to prevent it from suffering from a particular disease or condition.
Village chicken:	Traditional indigenous chickens.
Water Source:	Source of water for animals to drink e.g. boreholes, rivers, lakes.

Chapter Three: SURVEY METHODOLOGY AND ORGANIZATION

3.1. Sample Design and Coverage

The 2023 Livestock survey was designed to cover a representative sample of about 10,000 households residing in both rural and urban parts of the country. A total of 500 Enumeration Areas (EAs) were drawn from 36,770, EAs nationwide. The survey produced reliable estimates at national, provincial and Residence (rural/urban) levels.

3.2. Sample Stratification and Allocation

At the time of sampling, the 2022 Census of population and Housing frame was used to provide data on the proportions of households that raised livestock. This information was used to categorize enumeration areas according to percentage of households rearing livestock.

According to the census frame, the country is administratively demarcated into 10 provinces, which are further divided into 116 districts. The districts are further subdivided into constituencies, which are in turn divided into wards. For the purposes of conducting household surveys, wards are further divided into Enumeration Areas (EAs). The EA's constitute the Primary Sampling Units (PSUs) for the survey.

In order to have reasonable estimates at provincial level and at the same time take into account variation in the sizes of the provinces, the survey adopted the Optimal Square Root sample allocation method (Leslie Kish, 1987). This approach offers a better compromise between equal and proportional allocation, that is, small sized strata (province) are allocated larger samples compared to proportional and equal allocations. The following was the rural/urban allocation within each province.

Provincial and Rural/Urban allocation of EAs

Province	Allocation of Enumeration Ares			Households		
	Urban	Rural	Total	Urban	Rural	Total
Central	10	47	57	200	940	1,140
Copperbelt	17	31	48	340	620	960
Eastern	11	55	66	220	1,100	1,320
Luapula	5	40	45	100	800	900
Lusaka	15	24	39	300	480	780
Muchinga	5	39	44	100	780	880
Northern	7	45	52	140	900	1,040
North western	6	32	38	120	640	760
Southern	14	53	67	280	1,060	1,340
Western	6	38	44	120	760	880
Total	96	404	500	1,920	8,080	10,000

3.3. Coverage

The 2023 Livestock survey was conducted with a sample of 500 EAs. All rural and urban households were explicitly stratified into categories based on the scale of their livestock activities, that is, raising livestock and/poultry or bee keeping.

Note that the survey also collected data from all livestock raising institutions/farms which operated as establishments on a 100 percent basis using a separate large scale questionnaire.

3.4. Selection of Households

The 2023 Livestock survey used a two-stage stratified cluster sample design. During the first stage, 500 EAs were selected with Probability Proportional to Estimated Size (PPES) within the respective strata. The measure of size used was population figures for each EA taken from the 2022 Census of Population and Housing. During the survey, households were listed and stratified according to their scale of livestock, poultry or bee keeping activities. Listing of all households in the selected EAs was done to provide basic agricultural data. A sample of 20 households was drawn and detailed interview conducted. They were three explicit categories created at the second sampling stage in each EA namely A, B and C. For the purposes of the survey 5, 5 and 10 households were selected from A, B and C categories, respectively. In cases where they were shortfalls in category C, all households in this category were included and the difference from 20 was equally allocated to categories B and A. If the difference from 20 could not be equally allocated to the two categories, one (1) more was allocated to category B households than category A.

Where there was no household in category C, 10 sample households were allocated to category B, and 10 to category A.

Where there was no household in category C and less than 10 in category B, all those in B were included in the sample and the allocation in category A was increased to make up for the shortfall from the required number of 20 sample households.

Where all households in an EA fell in category A, all the required 20 sample households were selected from this category.

The following criteria was used to stratify households into the three (3) explicit categories: A, B and C.

Category C:

1. Households reporting Bee keeping or special livestock (sheep). When only 1 or 2 households in the EA reported Bee keeping or specified special livestock (sheep).
2. Households raising 50 or more cattle, 20 or more pigs, 30 or more goats, and
3. Households raising 50 or more chickens.

Category B:

1. Households reporting Bee keeping or sheep. When 3 to 5 households in the SEA report Bee keeping or specified livestock.
2. Households raising 10 to 49 cattle, 10 to 19 pigs, 10 to 29 goats, and households raising any number of chickens but less than 50.

Category A:

All households not in Category C and Category B.

Households raising less than 10 cattle, less than 10 goats, less than 10 pigs, and less than 50 chickens. All such households belong to category A.

3.5. Estimation procedure and sampling weights

Due to the disproportionate allocation of the sample points to various strata, sampling weights were required to correct for differential representation of the sample at the national and sub-national levels. The weights of the sample were in this case equal to the inverse of the product of the two selection probabilities employed at each stage of sampling.

Therefore, the probability of selecting an EA was calculated as follows:

$$P_{hi}^{-1} = \frac{a_h M_{hi}}{\sum M_{hi}}$$

Where:

P_{hi} = the first selection probability of EAs

ah = the number of EAs selected in stratum h

M_{hi} = the size (in terms of the population count) of the i^{th} EA in stratum h

$\sum M_{hi}$ = the total size of the stratum h ($h = 1, 2, 3, \dots, n$)

The selection probability of the household will be calculated as follows:

Example of category A

$$P_{hiA}^2 = \frac{n_{hiA}}{N_{hiA}}$$

Where:

P_{hiA}^2 = the second selection probability of households in category A

n_{hiA} = the number of households selected in category A from the i^{th} EA

N_{hiA} = the total number of households listed in category A in an EA.

Therefore, the EA specific sample weight for category A will be calculated as follows:

$$W_{iA}' = \frac{1}{P_{hi}^1 \times P_{hiA}^2}$$

3.6. Non-Response Adjustment

For the 2023 Livestock survey, no substitution was allowed for non-responding households therefore adjustments needed to be made.

The adjustment was equal to the livestock raising households (responding plus non-responding households) divided by the responding households.

3.7 Limitations

The 2023 Livestock Survey was designed to cover a representative sample of 9,680 households residing in both rural and urban parts of the country. The inadequacies in the sampling design could be attributed to the 2010 sampling frame which had not been updated over time.

At the planning stage, not every concept or definition was included but as much as possible, an attempt was made to conform to the international standards.

Further, the results of the survey can only be generalized to the entire population at national, provincial and regional (urban/rural) levels. The reference period for the survey is 1st May 2022 to 30th April 2023 [Marketing Season]. Therefore, comparison of results of this survey should only be made to surveys conducted during similar periods.

Furthermore, as much as possible, remedial measures were taken to ensure representativeness and accuracy of the survey results.

Chapter 4: DEMOGRAPHIC CHARACTERISTICS OF HOUSEHOLDS

4.0 Introduction

This chapter presents a summary of demographic and agricultural characteristics of households and establishments engaged in livestock activities as at 30th April 2023. The main agricultural characteristics include households involved in livestock/poultry production, honey production and crop/forage production. The main demographic characteristics highlighted in this section include sex, age, education and marital status of livestock household heads.

4.1.1. Distribution of Households

Table 4.1 shows the distribution of livestock and non-livestock raising households by province. In total, there are 4,245,158 households in Zambia. Of these, 1,875,298 representing 44.2 percent of all households were engaged in livestock/poultry activities as at 30th April 2023, while 2,369,860 households were not engaged in any livestock activities.

Among the provinces, Southern had the highest percentage of livestock raising households at 17.5 percent, followed by Eastern at 15.9 percent while Lusaka Province had the lowest percentage of livestock raising households at 5.8 percent. On the other hand, Lusaka Province had the highest number of households that were not engaged in any livestock activities at 31.2 percent while Northwestern Province recorded the lowest at 4.5 percent in terms of the households with least involvement in livestock activities.

Table 4.1: Distribution of Livestock and Non-Livestock Households by Province, 2023

Province	Total Households		Livestock-Raising Households		Non-Livestock Raising Households	
	Number	Percent	Number	Percent	Number	Percent
Central	410,455	9.7	222,989	11.9	187,465	7.9
Copperbelt	597,141	14.1	160,045	8.5	437,096	18.4
Eastern	460,346	10.8	297,808	15.9	162,538	6.9
Luapula	314,191	7.4	159,114	8.5	155,077	6.5
Lusaka	848,922	20.0	108,927	5.8	739,995	31.2
Muchinga	267,109	6.3	135,715	7.2	131,394	5.5
Northern	371,118	8.7	208,639	11.1	162,479	6.9
North-Western	222,636	5.2	116,639	6.2	105,996	4.5
Southern	498,094	11.7	327,568	17.5	170,526	7.2
Western	255,145	6.0	137,853	7.4	117,293	4.9
Zambia	4,245,158	100.0	1,875,298	100.0	2,369,860	100.0

4.1.2 Distribution of Agricultural Households by Activity

Table 4.2 shows the distribution of agricultural households according to agricultural activities namely Livestock/Poultry, Honey and Crop/Forage production.

Livestock/Poultry producing households: A total of 1,849,463 households were involved in livestock/poultry production as at 30th April 2023. Southern Province had the highest number of Livestock/Poultry raising households (17.7%), followed by Eastern Province (15.7%). North-western Province reported the lowest number of households engaged in Livestock/poultry production at 5.7 percent.

Honey producing households: A total of 44,003 households were involved in honey production as at 30th April 2023. Copperbelt Province had the highest number of households involved in honey production at 25.1 percent, followed by Southern Province at 19.9 percent, while Luapula Province accounted for the lowest number at 0.8 percent.

Crop/Forage producing households: A total of 56,899 households were engaged in crop/forage production as at 30th April 2023. Central Province recorded the highest percentage at 32.7 percent while Western Province accounted for the lowest at 0.4 percent.

Table 4.2: Distribution of Agricultural Households by Type of Agricultural Activity and Province, 2023

Province	Livestock-Raising Households including Honey and Forage	Livestock/Poultry Raising Households		Honey Producing Households		Forage producing Households	
		Number	Percent	Number	Percent	Number	Percent
Central	222,989	222,491	12.0	4,282	9.7	18,627	32.7
Copperbelt	160,045	159,217	8.6	11,033	25.1	7,760	13.6
Eastern	297,808	291,209	15.7	5,205	11.8	565	1.0
Luapula	159,114	156,635	8.5	362	0.8	1,838	3.2
Lusaka	108,927	108,792	5.9	2,022	4.6	4,776	8.4
Muchinga	135,715	134,967	7.3	2,791	6.3	5,094	9.0
Northern	208,639	208,606	11.3	1,002	2.3	1,890	3.3
North-Western	116,639	104,975	5.7	7,559	17.2	10,568	18.6
Southern	327,568	326,489	17.7	8,735	19.9	5,538	9.7
Western	137,853	136,082	7.4	1,012	2.3	244	0.4
Zambia	1,875,298	1,849,463	100.0	44,003	100.0	56,899	100.0

4.1.3 Distribution of Livestock Raising Households by Sex of Household Head

Table 4.4 shows the distribution of livestock-raising household heads by sex and province. A total of 1,390,283 households were male-headed accounting for 74.1 percent of the total livestock households, while 485,015 were female-headed (25.9%) in the country. Among the provinces, Lusaka had the highest percentage of male-headed households (78.8%) while Western had the lowest at 59.3 percent. Further, Western Province had the highest percentage of female-headed households (40.7%) while Lusaka Province had the lowest at 21.2 percent.

Table 4.4: Distribution of Livestock/Poultry Raising Households by Sex of Head of Household and Province, 2023

Province	Total number of heads of livestock/Poultry raising households	Sex of Household Heads			
		Male	Percent	Female	Percent
Central	222,989	164,455	73.8	58,535	26.2
Copperbelt	160,045	117,834	73.6	42,211	26.4
Eastern	297,808	224,092	75.2	73,716	24.8
Luapula	159,114	119,986	75.4	39,128	24.6
Lusaka	108,927	85,882	78.8	23,046	21.2
Muchinga	135,715	104,776	77.2	30,939	22.8
Northern	208,639	163,948	78.6	44,691	21.4
North-Western	116,639	86,218	73.9	30,421	26.1
Southern	327,568	241,374	73.7	86,194	26.3
Western	137,853	81,718	59.3	56,135	40.7
Zambia	1,875,298	1,390,283	74.1	485,015	25.9

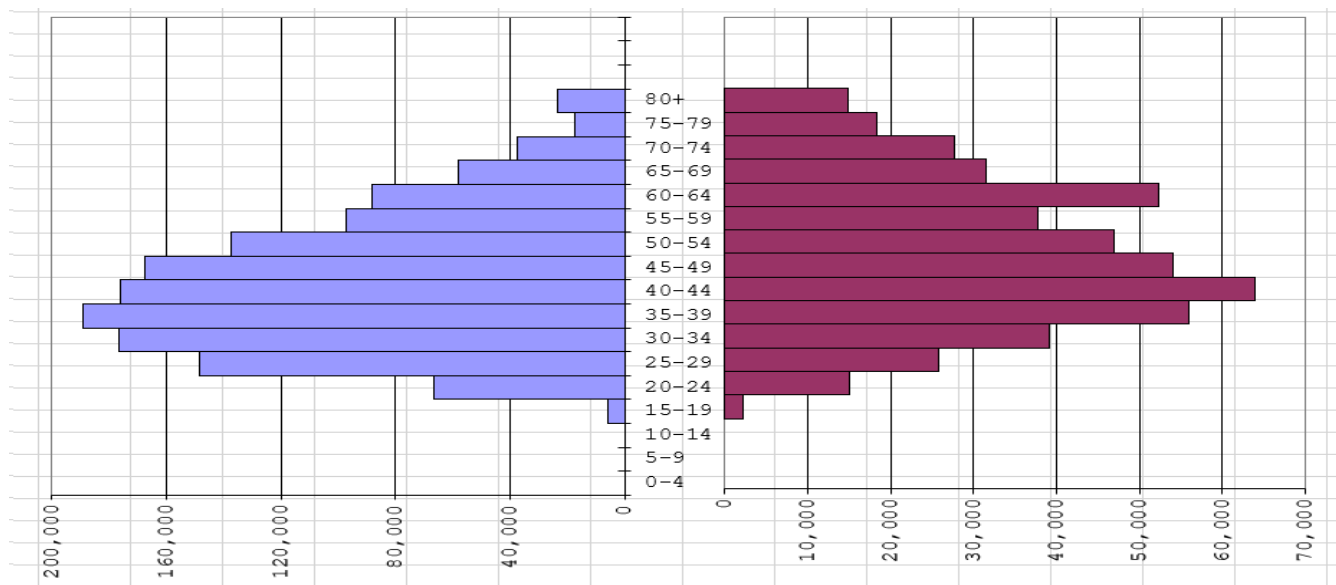

4.1.4 Age Group and Sex of Household Head of Livestock/Poultry Households

Table 4.5 shows the age group and sex of household heads of livestock/poultry raising households in the country as at 30th April, 2023. At national level, the majority of the household heads were aged between 35- and 39-years accounting for 13.1 percent, the same applied for the male-headed households with the majority being at 13.6 percent. female-headed households were the majority between the ages of 40 to 44 at 13.2 percent. The 15-19 age groups had the least at 0.4 percent.

Table 4.5: Sex of Household Heads by five-year Age Group of Livestock/Poultry raising Households, 2023

Age Group	Sex of Household Heads				Total number of heads of livestock raising households including Honey and Forage Producers	
	Male		Female			
	Number	Percent	Number	Percent	Number	Percent
15-19	6,029	0.4	2,176	0.4	8,205	0.4
20-24	66,372	4.8	14,997	3.1	81,369	4.3
25-29	148,485	10.7	25,746	5.3	174,232	9.3
30-34	176,735	12.7	39,074	8.1	215,809	11.5
35-39	189,321	13.6	55,891	11.5	245,212	13.1
40-44	176,083	12.7	63,869	13.2	239,952	12.8
45-49	167,451	12.0	53,988	11.1	221,440	11.8
50-54	137,512	9.9	46,927	9.7	184,439	9.8

Figure 4.1: Five-year Age Group by Sex of Heads of Livestock/Poultry raising Households, 2023

4.1.5 Distribution of Household Heads by Sex and Broad Age Group, 2023

Table 4.6 shows the distribution of livestock raising household heads by sex and age group. Of the total 1,875,298 households that were engaged in livestock raising, honey and forage production, the majority household heads were male-headed (1,390,283) compared to female-headed at 485,015. There were more male and female heads of livestock raising households in the age group above 35 years old (69 and 80%, respectively) compared to male-headed (31%) and female-headed (20%) in the 15 to 35 years age group.

Table 4.6: Distribution of Heads of Livestock Raising Households by Sex and Broad Age Group, 2023

Age Group	Sex of Heads of livestock Household				Total number of heads of livestock raising households including Honey and Forage Producers	
	Male		Female			
	Number	Percent	Number	Percent	Number	Percent
Less than 15 years old	-	-	-	-	-	-
15 to 35 years old	435,868	31.0	94,696	20.0	530,564	28.0
Above 35 years old	954,415	69.0	390,319	80.0	1,344,734	72.0
Total	1,390,283	100.0	485,015	100.0	1,875,298	100.0

4.1.6 Distribution of Household Members by Sex and Broad Age Group

Table 4.7 shows that the highest number of household members (both male and female) from livestock/poultry raising households was in the age group 15-35 years (38.5%), followed by those who were less than 15 years (36.8%) and lastly, household members above 35 years old (24.7%).

Among female household members the majority were 15 to 35 years old (38.5%), while among male household members, the majority were 15 to 35 years old (38.5%).

Table 4.7: Distribution of Livestock/Poultry Raising Household Members by Sex and Broad Age Group, 2023

Age Group	Sex of Household Members				Total household members	
	Male		Female			
	Number	Percent	Number	Percent	Number	Percent
Less than 15 years old	1,687,595	37.5	1,660,411	36.1	3,348,006	36.8
15 to 35 years old	1,732,365	38.5	1,770,539	38.5	3,502,905	38.5
Above 35 years old	1,078,219	24.0	1,171,652	25.5	2,249,871	24.7
Total	4,498,180	100.0	4,602,603	100.0	9,100,783	100.0

4.1.7 Distribution of Household Heads by Marital Status

Table 4.8 shows the distribution of livestock raising household heads by marital status and province. The majority of the household heads were monogamously married (68.2%), followed by widowed (12%) and divorced household heads at 6.3 percent. The least common category was cohabiting at 0.1 percent.

At provincial level, the highest percentage of heads of livestock raising households was in monogamous marriages and was reported in Northern Province (75.2%) followed by Luapula Province at 71.4 percent. The lowest proportion of household heads who were monogamously married was reported in Western Province at 55.3 percent.

Table 4.8: Distribution of Heads of Livestock/Poultry Raising Households by Marital Status and Province, 2023

Province	Total number of heads of livestock raising households	Marital Status (Percent)						
		Never married	Monogamously	Polygamously	Divorced	Widowed	Separated	Cohabiting
Central	222,989.0	6.8	67.5	6.4	7.1	9.1	3.0	-

4.1.8 Summary Distribution of Household Heads by level of Education Completed

Table 4.9 shows the distribution of livestock/poultry raising household heads by level of education completed by province. The table shows that most livestock/poultry raising household heads (53.5%) had completed primary school education, followed by those who had completed secondary school education (35.4%). The household heads who had completed tertiary education were the least accounting for 3.5 percent.

**Table 4.9: Summary Distribution of Livestock/Poultry Raising Household Heads by level of Education Completed by Province, 2023**

Province	None	Primary	Secondary	Tertiary	Total number of heads of livestock raising/ Honey/ Forage households
	Percent	Percent	Percent	Percent

4.1.9 Detailed Distribution of Livestock/Poultry Raising Household Heads by level of Education Completed, 2023

Table 4.10 shows detailed distribution of livestock/poultry raising household heads by level of education completed by province. The highest percentage of livestock/poultry raising household heads had completed primary school education level (53.5%), followed by those who had completed secondary school education (21.6%). The least percentage of household heads accounting for 0.2 percent reported having masters' degree level as their highest level of education attained.

Table 4.10: Detailed Distribution of Livestock/Poultry Raising Household Heads by level of Education Completed by Province, 2023

4.1.10 Average Size of Livestock/Poultry Raising Households

Table 4.11 shows that the average number of household members of livestock/poultry raising households (both male and female headed) was 5 countrywide. The average number of household members was 5 for male and 4 for female headed households.

Luapula, Northern, and North-Western provinces reported the largest average household members of 6 for male headed livestock/poultry raising households. Meanwhile, the largest average household size for the female-headed households was reported in Copperbelt, Lusaka and Southern at 5.

Table 4.11: Average Household Size of Livestock/Poultry Raising Households by Sex of Heads and Province, 2023

Chapter 5: LIVESTOCK PRODUCTION AND MANAGEMENT

5.0. Introduction

This chapter presents livestock production statistics, including the number of various types of livestock, households and establishments raising various types of livestock, sales of live cattle in households and establishments, and herd structure during the reference period. The chapter further highlights detailed statistics on the purpose of raising livestock, major constraints and diseases in the livestock sector during the period.

5.1 Livestock Production

5.1.1 Households Raising Various Types of Livestock

Table 5.1 shows the number and percentage of households raising various types of livestock. A total of 535,371 households were involved in cattle raising. Among Provinces, Southern had the highest number of cattle-raising households at 168,608 followed by Eastern with 166,184. Luapula recorded the lowest at 977.

With regard to Goat rearing, a total of 723,740 households were recorded. Southern Province recorded the highest with 201,797 households followed by Eastern Province with 98,535. The lowest was Western Province with 19,760 households.

A total of 42,653 households were reported to be involved in Sheep farming. Southern Province recorded the highest with 18,305 households while Northern and Western provinces both recorded 176 households and were the lowest.

Under Pig rearing, 271,474 households were raising Pigs. Southern Province had the highest 71,370 households. The lowest number of households (11,465) involved in Pig raising were from Lusaka Province. A total of 5,601 households were involved in donkey raising. Southern Province had the highest with 3,270 households while Eastern, Luapula and Lusaka provinces did not record any household raising donkeys.

Table 5.1: Number and Percentage of Households Raising Various Types of Livestock by Province, 2023

Province	Number of Households by Type of Livestock Raised									
	Cattle		Goats		Sheep		Pigs		Donkeys	
	Number	Percent	Number	Percent	Number	Percent	Number	Percent	Number	Percent

Zambia	535,371	100.0	723,740	100.0	42,653	100.0	271,474	100.0	5,601	100.0

5.1.2 Purpose of Raising Livestock by Number of Households

Table 5.2 shows the distribution of households by the purpose of raising livestock. A total of 535,371 households were recorded as cattle-raising of which 66.0 percent indicated their main purpose of keeping cattle was for draught power. About 80.8 percent of the total 723,740 goat raising households indicated that their main purpose was for selling/income. Sheep raising households were 42,653, of which 66.4 percent raised sheep for selling/income. Out of a total of 271,474 pig raising households, 78.9 percent reported raising for selling/income. Further, 94.0 percent of donkey raising households reported raising donkeys for draught power.

Table 5.2: Percentage Distribution of Households by Purpose of Raising and Type of Livestock

Livestock type	Number of Households by Type of Livestock Raised	Purpose of Raising Livestock							
		Meat	Milk	Draught power	Aesthetic value	Selling/income	Breeding	Manure	Other Purposes
Cattle	535,371	5.6	1.7	66.0	4.3	20.9	0.1	1.3	0.2
Goats	723,740	16.1	0.1	0.0	2.5	80.8	0.0	0.5	0.0
Sheep	42,653	24.6	0.0	0.0	8.7	66.4	0.3	0.0	0.0
Pigs	271,474	18.0	0.0	0.0	1.9	78.9	0.0	1.2	0.1
Donkeys	5,601	0.0	0.0	94.0	5.3	0.0	0.0	0.0	0.6

5.2 Cattle Production

5.2.1 Opening and Closing Stock of Cattle for Households and Establishments

Table 5.3 shows the number of cattle raised by province on 1st May, 2022 (Opening Stock) and on 30th April, 2023 (Closing Stock). At national level, the cattle population increased by 174,777 representing 3.5 percent. Eastern, Luapula, Lusaka, Muchinga, Northern, North-Western and Southern provinces posted increases while reductions were reported in Central, Copperbelt and Western provinces.

Table 5.3: Opening and Closing Stock of Cattle by Province, 2023

Province	Total Cattle Raised		Population Change	
	1st May 2022	30th April, 2023	Increase/Decrease	Percent
Central	810,846	746,354	-64,492	-8.0
Copperbelt	200,424	174,844	-25,580	-12.8
Eastern	916,434	1,014,051	97,617	10.7

Zambia	5,115,495	4,851,838	94.8	263,657	5.2

5.2.3 Cattle Herd Structure under Households

The cattle herd structure for households by province as at 30th April, 2023 is shown in Table 5.5. Cows constituted a larger percentage at 38.0 percent, followed by oxen and heifers at 19.8 percent and 13.2 percent, respectively. The least were Steers at 4.1 percent.

Table 5.5: Cattle Herd Structure for households by Province, 2023

Province	Total number of Cattle	Cattle Category Raised						
		Cows	Heifers	Bulls	Weaners	Oxen	Tollies/Steers	Calves

5.2.4 Average Number of Cattle Raised per Household and Establishment

Table 5.5 shows the average number of cattle raised by households and establishments as at 30th April 2023. At national level, the average number of cattle raised per household was 9 and 186 for establishment. At provincial level, Lusaka and Northern provinces recorded the highest average number of cattle per household at 13 while North-Western Province recorded the lowest at 4. Southern Province reported the highest average number of cattle per establishment at 364, while the lowest was Eastern Province at 33.

Table 5.6: Average Number of Cattle Raised Per Household and Establishment, 2023

Province	Number of Cattle Raised		Number of Cattle-raising Households and Establishments		Average number Cattle raised	
	Households	Establishments	Households	Establishments	Households	Establishments

5.2.5 Cattle-raising Households by Size of Herd Raised, 2023.

Table 5.7 shows the distribution of cattle raising households by herd size and province. Of the total 535,371 households, the majority (55.9 percent) had a herd size of 1 to 5 cattle, followed by those raising from 6 to 10 cattle at 20.9 percent. Households with a herd size of 11 cattle or more collectively accounted for 23.2 percent of the total cattle-raising households in Zambia.

Table 5.7: Percentage of Cattle-Raising Households by Size of Herd Raised, 2023

Province	Total number of Cattle-raising Households	Size of Herd Raised (Percent)

5.2.7 Number of Cattle Owned by Households

Table 5.9 shows the distribution of cattle raised by ownership, sex and province as at 30th April 2023. Overall, 84.1 percent of cattle in Zambia (4,082,180) were owned by the households. Of this number, female members of the households owned 26.7 percent of the cattle, while 73.3 percent were owned by male members of the households.

**Table 5.9: Cattle Ownership by Sex of Members of Household, 2023**

Province	Cattle Raised by Households	Cattle Owned by Households		Cattle owned by Female Household Members		Cattle owned by Male Household Members	
	Number	Number	Percent	Number	Percent	Number	Percent
Central	657,033	638,366	97.2	253,418	39.7	384,947	60.3

Western	575,728	467,550	81.2	147,544	31.6	320,006	68.4
Zambia	4,851,838	4,082,180	84.1	1,089,749	26.7	2,992,431	73.3

Figure 5.1 shows the distribution of cattle owned by female household members by province. Overall, all provinces reported less than 40 percent of cattle having been owned by female household members except for Luapula Province that reported the highest at 91.2 percent. The lowest was recorded in Northern Province at 8.7 percent.

Figure 5.1: Percent of Cattle owned by Female Household Members, 2023

5.2.8 Number of Cattle Slaughtered by Households and Establishments

A total of 188,725 cattle slaughters were recorded in the country from both households and establishments between 1st May 2022 and 30th April 2023. Overall, Southern Province recorded the highest number of cattle slaughters at 73,038, while Luapula Province recorded the lowest at 1,707.

At Household level, Southern Province recorded the highest share at 39.5 percent while Luapula Province reported the lowest at 0.9 percent. However, at establishment level Lusaka Province recorded the highest at 45.3 percent, followed by Southern Province (26.3%) while Luapula Province recorded the lowest at 0.7 percent (Table 5.10). Please note that this information does not include cattle slaughtered in abattoirs and butcheries across the country.

**Table 5.10: Number and Percentage of Cattle Slaughtered by Households and Establishments, 2023**

Province	Total Number of Cattle Slaughtered	Households		Establishments	
		Number	Percent	Number	Percent
Central	18,865	17,787	10.1	1,078	9.1

Western	17,842	17,678	10.0	164	1.4
Zambia	188,725	176,890	100.0	11,835	100.0

5.3.9 Number of Cattle Sold Live by Households and Establishments

Table 5.11 shows the cumulative number and percentage of cattle sold live by households and establishments during the period, 1st May 2022 to 30th April 2023

A total of 477,351 cattle were sold live from both households and establishments. Southern Province recorded the highest number of cattle sold live by both households and establishments at 180,233, while Luapula Province reported the lowest at 1,685. At Household level, Southern Province recorded the highest percentage of live cattle sales at 36.8 percent while Luapula Province reported the lowest at 0.3 percent. A similar pattern was observed for the sales by establishments.

Table 5.11: Number and Percentage of Cattle Sold Live by Households and Establishments, 2023

Province	Total number of cattle sold Live	Cattle sold by Households		Cattle sold by Establishments	
		Number	Percent	Number	Percent
Central	104,485	87,170	20.7	17,315	21.9

Zambia	477,351	420,234	100.0	57,117	100.0

5.2.10 Calving Percentage

The calving percentage is the number of calves born in relation to the number of cows exposed for mating or servicing in the herd. The calving percentage by province during the reference period is shown in Table 5.12.

The average calving percentage in the country was at 26.8 percent. Among Provinces, the highest calving percentage was recorded in Southern Province at 32.6 percent followed by Western Province at 31.0 percent. The least calving percentage was recorded in North-Western Province at 7.5 percent .

Table 5.12: Cattle Calving Rate for Households by Province, 2023

Province	Number of cows	Number of calves born	Calving Rate
Central	259,697	51,264	19.7
Copperbelt	56,807	12,673	22.3
Eastern	371,702	88,459	23.8

Western	236,390	73,298	31.0
Zambia	1,853,498	496,893	26.8

5.3 Goat Production

5.3.1 Opening and Closing Stock of Goats for Households and Establishments

Table 5.13 shows the number of goats raised by province on 1st May, 2022 (Opening Stock) and on 30th April, 2023 (Closing Stock). At national level, the goat population decreased by 3.0 percent (169,713 goats). The decrease was reported in Central, Copperbelt, Eastern, Southern and Northern provinces while Luapula, Lusaka, Muchinga, North-Western and Western provinces recorded increases.

Table 5.13: Opening and Closing Stock of Goats by Province, 2023

Province	Total Goats Raised		Population Change	
	1st May 2022	30th April, 2023	Increase/Decrease	Percent
Central	998,486	901,464	-97,022	-9.7
Copperbelt	390,455	300,082	-90,373	-23.1

5.3.4 Average Number of Goats raised per Household and Establishment

Table 5.16 shows the average number of goats raised by households and establishments as at 30th April 2023. At national level, the average number of goats raised per Household was 8 and 53 for establishments.

At provincial level, Lusaka reported the highest average number of goats per household at 11 and Northern recorded the lowest number of goats at 4. Southern Province reported the highest average number of goats per establishment at 108, while Luapula recorded the lowest at 20.

Table 5.16: Average Number of Goats Raised Per Household and Establishment, 2023

Province	Number of Goats Raised		Number of households and establishments		Average number Goats raised	
	Households	Establishments	Households	Establishments	Households	Establishments

5.3.5 Percentage of Goat-raising Households by Herd Size

Table 5.17 shows the distribution of goat raising households by herd size and province. Of the total 723,740 households, the majority (50.4 percent) had a herd size of 1 to 5 goats, followed by those raising 6 to 10 goats at 26.6 percent. Households with a herd size of 21 goats or more collectively accounted for 6.8 percent of the total goat-raising households in Zambia.

Table 5.17: Percentage of Goat-Raising Households by Size of Herd Raised, 2023

Province	Total number of Goat-raising Households	Size of Herd Raised (Percent)									
		1-5	6-10	11-15	16-20	21-30	31-40	41-50	51-100	101-150	150+

5.3.6 Number of Goats Owned by Households and Female Members of Households

Table 5.18 shows the distribution of goats owned by households and female members of households by province as at 30th April 2023. Overall, 91.3 percent (5,041,723) of goats in Zambia were owned by households raising them. Of this number, female members of the households owned 39.7 percent, while 60.3 percent were owned by male members of the households.

Table 5.18: Goat Ownership by Sex of Members of Household, 2023

Province	Goat Raised by Households	Goat Owned by Households		Goat owned by Female Household Members		Goat owned by Male Household Members	
	Number	Number	Percent	Number	Percent	Number	Percent
Central	886,341	846,192	95.5	365,562	43.2	480,629	56.8

Zambia	5,522,772	5,041,723	91.3	2,002,710	39.7	3,039,013	60.3

Western Province reported the highest share of goats owned by female members of the households at 56.0 percent of the total goats owned by households in the province. The lowest share of goats owned by female members of the households was recorded in Muchinga Province at 26.3 percent (Figure 5.1).

Figure 5.2: Percent of Goats owned by Female Household Members, 2023

5.3.7 Number of Goats Slaughtered by Households and Establishments

A total of 716,712 goat slaughters were recorded in the country from both households and establishments between 1st May 2022 and 30th April 2023. Southern Province recorded the highest number of slaughters at 169,804 while Western reported the lowest at 16,114.

At Household level, Southern Province recorded the highest share at 23.7 percent while Western Province reported the lowest at 2.3 percent. At establishment level, Central Province recorded the highest at 47.1 percent and Western Province reported the lowest at 0.1 percent. (See Table 5.19)

Table 5.19: Number and Percentage of Goats Slaughtered by Households and Establishments, 2023

Province	Total number Slaughtered	Households		Establishments	
		Number	Percent	Number	Percent

5.3.8 Number of Goats sold live by Households and Establishments

Table 5.20 shows the number and percentage of goats sold live by households and establishments during the reference period, 1st May 2022 to 30th April 2023. A total of 1,392,211 goats were sold live from both households and establishments. Southern Province recorded the highest number of goats sold live by both households and establishments at 483,064, while Western was lowest at 21,090.

At Household level, Southern Province reported the highest percentage of sales at 34.7 percent while Western reported the lowest at 1.5 percent. Under establishments, Central Province recorded the highest percentage of sales at 29.4 percent, while Northern reported the lowest at 0.3 percent.

Table 5.20: Number and Percentage of Goats Sold Live by Households and Establishments, 2023

5.4 Sheep Production

5.4.1 Opening and Closing Stock of Sheep for Households and Establishments

Table 5.21 shows the number of sheep raised by province on 1st May, 2022 (Opening Stock) and on 30th April, 2023 (Closing Stock). At national level, the Sheep population increased by 0.2 percent (630 Sheep). The increases in the Sheep population were reported in Central, Copperbelt, Lusaka, Northern, Southern and Western provinces. Conversely, Eastern, Luapula, Muchinga and North-Western Provinces posted a decrease in sheep population.

Table 5.21: Opening and Closing Stock of Sheep Raised by Households and Establishments by Province, 2023

Province	Total Sheep Raised		Population Change	
	1st May 2022	30th April, 2023	Increase/Decrease	Percent
Central	91,054	91,751	698	0.8

5.4.5 Percentage of Sheep-raising Households by Herd Size, 2023

Table 5.25 shows the distribution of sheep raising households by herd size and province. Of the total 42,653 households, 55.4 percent had a herd size of 1 to 5 sheep, this was followed by those raising 6 to 10 goats at 29.6 percent. Households with a herd size of 11 sheep or more collectively accounted for 15.0 percent of the total Sheep-raising households in Zambia.

Table 5.25: Percentage of Sheep Raising Households by Size of Herd Raised, 2023

Province	Total number of Sheep-raising Households	Size of Herd Raised (Percent)									
		1-5	6-10	11-15	16-20	21-30	31-40	41-50	51-100	101-150	150+

Zambia	284,353	251,508	79,787	31.7	171,720	68.3

Northern Province recorded the highest share of sheep owned by female members of the households at 100.0 percent of the total sheep owned by households in the province. The lowest share of sheep owned by female members of the households was recorded in Southern Province at 8.4 percent (Figure 5.2).

Figure 5.3: Percent of Sheep owned by Female Household Members, 2023.

5.3.7 Number of Sheep Slaughtered by Households and Establishments

A total of 35,081 sheep slaughters were recorded in the country from both households and establishments between 1st May 2022 and 30th April 2023. Central Province recorded the highest number of sheep slaughters at 11,831, while Northern and Western recorded the lowest number of slaughters.

At household level, Central Province recorded the highest share at 34.4 percent while Northern and Western reported the lowest at 0.2 percent each. Under establishments, Southern Province recorded the highest at 38.3 percent, while Northern and Western reported no slaughters. (Table 5.26)

Table 5.26: Number and Percentage of Sheep Slaughtered by Households and Establishments, 2023

Province	Total number Slaughtered	Households		Establishments	
		Number	Percent	Number	Percent
Central	11,831	11,710	34.4	122	11.6

5.4.8 Number of Sheep sold live by Households and Establishments

Table 5.27 shows the number and percentage of sheep sold live by households and establishments during the reference period, 1st May 2022 to 30th April 2023. A total of 61,416 sheep were sold live during the reference period from both households and establishments. Southern Province recorded the highest number of sheep sold live by both households and establishments at 23,500, while Northern and Western provinces did not record any live sales.

At household level, Southern Province recorded the highest percentage of sales at 39.1 percent, followed by Central at 28.8 percent. Under establishments, Copperbelt Province recorded the highest percentage of sales at 45.2 percent, this was followed by Southern Province at 24.9 percent.

Table 5.27: Number and Percentage of Sheep Sold Live by Households and Establishments, 2023

Province	Total number of Sheep Sold Live	Sheep sold by Households		Sheep sold by Establishments	
		Number	Percent	Number	Percent

5.5 Pig Production

5.5.1 Opening and Closing Stock of Pigs for Households and Establishments

The number of pigs raised by province on 1st May, 2022 (Opening Stock) and on 30th April, 2023 (Closing Stock) is shown in Table 5.31. At national level, the population of pigs decreased by 153,274 representing 8.7 percent.

All provinces with the exception of Western and North-Western reported a decrease in pig population. Lusaka Province reported the largest population decrease in the number of pigs raised at 58,441 accounting for 22.1 percent, followed by Central at 38,234 (18.6 percent). Conversely, North-western and Western Provinces posted increases in pig population at 35.8 percent and 22.7 percent, respectively.

Table 5.31: Opening and Closing Stock of Pigs by Province, 2023

Province	Total Pigs Raised		Population Change	
	1st May 2022	30th April, 2023	Increase/Decrease	Percent
Central	206,123	167,889	-38,234	-18.5
Copperbelt	183,713	168,730	-14,983	-8.2

Luapula Province recorded the highest share of pigs owned by female members of the households at 83.7 percent of the total pigs owned by households in the province. The lowest share of pigs owned by female members of the households was recorded in Northern Province at 21.7 percent (Figure 5.2).

Figure 5.4: Percent of Pigs owned by Female Household Members

5.5.7 Number of Pigs slaughtered by Households and Establishments

A total of 306,529 pig slaughters were recorded from both households and establishments between 1st May 2022 and 30th April 2023. Copperbelt Province recorded the highest number of pig slaughters at 109,469 while Western Province reported the lowest at 3,388.

At household level, Copperbelt Province recorded the highest percentage of pig slaughters at 35.7 percent while Western Province posted the lowest at 1.1 percent. At establishment level Copperbelt Province reported the highest at 37.8 percent and Western the lowest at 0.2 percent (Table 5.37).

Table 5.37: Number and Percentage of Pigs Slaughtered by Households and Establishments, 2023

Province	Total number of Pigs Slaughtered	Households		Establishments	
		Number	Percent	Number	Percent

5.5.8 Number of Pigs Sold Live by Households and Establishments

Table 5.38 shows the number and percentage of Pigs sold live by households and establishments during the period, 1st May, 2022 to 30th April, 2023. A total of 687,427 pigs were sold live from both households and establishments. Southern Province recorded the highest number of pigs sold live by both households and establishments at 194,550, while Luapula reported the lowest at 15,150.

At household level, Southern Province recorded the highest sales at 28.6 percent while Luapula was lowest at 2.2 percent. Under establishments, Central Province posted the highest percentage of sales at 39.3 percent, and Western was the lowest at 1.1 percent.

Table 5.38: Number and Percentage of Pigs Sold Live by Households and Establishments, 2023

Province	Total number of Pigs sold Live	Pigs sold by Households		Pigs sold by Establishments	
		Number	Percent	Number	Percent

5.6 Other Animal Species

This section covers other animal species such as donkeys, cats and dogs and the number raised by households and establishments.

5.6.1 Dogs

Table 5.39 shows the number of dogs raised by households and establishments by province. The dog population from both household and establishment stood at 1,007,659. Southern Province reported the highest number at 311,872, followed by Central Province at 155,939. Luapula Province accounted for the lowest at 20,243.

Table 5.39: Number of Dogs Raised by Households and Establishments by Province, 2023

Province	Households		Establishments		Total number of Dogs Raised
	Number of Households Raising Dogs	Number of Dogs raised	Number of Establishments Raising Dogs	Number of Dogs Raised	
Central	74,903	155,317	206	622	155,939

Zambia	522,014	1,005,872	516	1,787	1,007,659

5.6.2 Cats

Table 5.40 shows the number of cats raised by households and establishments by province. The Cat population from both households and establishment was 338,405. Southern Province recorded the highest number at 132,242, followed by Central Province at 49,384. North-Western Province accounted for the lowest at 6,943 cats.

Table 5.40: Number of Cats Raised by Households and Establishments by Province, 2023

Province	Households		Establishments		Total number of Cats Raised
	Number of Households Raising Cats	Number of Cats Raised	Number of Establishments Raising Cats	Number of Cats Raised

5.7 Livestock Management

5.7.1 Fencing of Livestock Holding

Table 5.41 shows the number and percentage of livestock keeping households with fenced livestock holdings by province. The total number of livestock-keeping households with fenced livestock holdings was 541,798 representing 29.3 percent of the livestock keeping households in the country.

Among provinces, Eastern had the highest percentage of households with fenced livestock holdings at 56.5 percent. Luapula Province recorded the least percentage of households with fenced livestock holdings at 2.7 percent.

Table 5.41: Number and Percentage of Livestock Raising Households with Fenced Livestock Holding, 2023

Province	Households Involved in Livestock Farming	Total Households with Fenced Livestock Holding	
	Number	Number	Percent
Central	222,491	40,891	18.4
Copperbelt	159,217	55,751	35.0
Eastern	291,209	164,405	56.5
Luapula	156,635	4,193	2.7
Lusaka	108,792	43,825	40.3
Muchinga	134,967	19,107	14.2
Northern	208,606	45,349	21.7
North Western	104,975	28,619	27.3
Southern	326,489	117,056	35.9
Western	136,082	22,603	16.6
Zambia	1,849,463	541,798	29.3

5.7.2 Livestock Record Keeping

Table 5.42 shows the number and percentage of livestock keeping households that keep records. The total number of households reported to be keeping records was 73,314 representing 4.0 percent.

Among provinces, Lusaka had the highest number of households that kept livestock records at 8.7 percent. Luapula and Muchinga provinces had the least number of households that kept livestock records with 1.5 percent and 1.0 percent, respectively.

Table 5.42: Households Keeping Livestock Records by Province, 2023

Province	Total Number of Households Raising Livestock	Total Households Keeping Livestock Records	
	Number	Number	Percent
Central	222,491	4,756	2.1
Copperbelt	159,217	11,287	7.1
Eastern	291,209	18,154	6.2
Luapula	156,635	2,386	1.5
Lusaka	108,792	9,454	8.7
Muchinga	134,967	1,329	1.0
Northern	208,606	3,354	1.6
North Western	104,975	2,814	2.7
Southern	326,489	14,660	4.5
Western	136,082	5,119	3.8
Zambia	1,849,463	73,314	4.0

Table 5.43 shows the number and percentage of households keeping records by education level of household heads. Out of the total households keeping livestock records, the highest percentage of household heads(16.9%) had tertiary education, this was followed by households with household heads who had secondary education at 5.1 percent. Households with household heads who had primary education reported the least at 2.5 percent households keeping livestock records.

Table 5.43: Number and Percentage of Households Keeping Livestock Production Records by Level of Education of Household Heads, 2023

Level of Education of Household Head	Total Households	Households Keeping Livestock Records	
		Number	Percent
None	140,278	3,661	2.6
Primary	988,654	24,996	2.5
Secondary	655,448	33,678	5.1
Tertiary	65,084	10,979	16.9
TOTAL	1,849,463	73,314	4.0

5.7.3 Households and Establishments Practicing Supplementary Feeding, 2023.

Table 5.44 shows the number and percentage of households and establishments practising supplementary feeding by province. Of the 1,849,463 livestock raising households, 395,993 households were practising supplementary feeding, representing 21.4 percent. The highest percentage of households that practised supplementary feeding was in Copperbelt Province at 29.9 percent followed by Southern at 27.6 percent. The lowest percentage of Households practising supplementary feeding was reported in North-Western Province at 10.8 percent.

Of the 1,995 livestock raising establishments, a total of 1,002 were practising supplementary feeding, representing 50.2 percent. The highest percentage of establishments that practised supplementary feeding was reported in Lusaka Province at 73.6 percent, followed by Western at 68.5 percent and the least was Central at 36.2 percent.

Table 5.44: Number and Percentage of Households and Establishments Practising Supplementary Feeding by Province, 2023

Province	Households raising Livestock	Households Practising Supplementary Feeding		Establishments raising Livestock	Establishments Practising Supplementary Feeding	
	Number	Number	Percent	Number	Number	Percent
Central	222,491	60,976	27.4	629	228	36.2

Zambia	1,849,463	395,993	21.4	1995	1002	50.2

5.7.4 Type of Feed used by Households

Table 5.45 shows the number and percentage of livestock-raising Households that used supplementary feeding by type of feed used and province.

At national level, the majority (73.6 percent) of livestock-raising households used on-farm feed, while 14.9 percent used commercial feed. The percentage of households that used other types of feed accounted for 11.4 percent.

Table 5.45: Number and Percentage of households by Type of Feed used and Province, 2023

Province	Households Practicing Supplementary Feeding	Type of Feed Used					
		Commercial		On farm		Other	
		Number	Percent	Number	Percent	Number	Percent
Central	60,976	2,825	4.6	34,463	56.5	23,687	38.8

5.7.5 Sources of Water

Table 5.46 shows the percentage of households accessing various sources of water by province. Boreholes/wells were the most utilised source of water at 44.6 percent, followed by stream/river at 29.7 percent while the least utilised source of water were lakes at less than 1.0 percent.

Among provinces, Lusaka reported the highest percentage of households that utilised boreholes/wells at 70.9 percent while Muchinga was the least at 31.8 percent. Streams/river were the most used in Western Province (44.6 percent), followed by Muchinga and Northern at 40.6 percent and 38.6 percent, respectively.

Table 5.46: Number and Percentage of Households Accessing Various Water Sources for Livestock by Province, 2023

Province	Total Number of Households Raising Livestock	Sources of water							
		Stream/River	Spring	Lake	Water Utility company	Swamp/Dambo/wetlands	Dam/Reservoir	Borehole/Wells	Other Water Sources
		Percent	Percent	Percent	Percent	Percent	Percent	Percent	Percent
Central	222,491	30.4	0.9	0.0	1.8	1.6	1.4	42.7	21.1
Copperbelt	159,217	20.4	0.5	0.0	3.2	0.9	2.2	36.4	36.5
Eastern	291,209	37.4	0.9	0.0	0.9	7.4	4.1	39.8	9.4

5.7.6 Distance to Nearest Source of Water

Table 5.47 shows the percentage of livestock-raising households by distance to source of water and province. At national level, less than one percent of the livestock-raising households accessed water over 10 km away from their homes.

Among provinces, Southern and North-Western reported the highest percentage of households accessing water over 10 km away from their homestead at 1.6 percent each, followed by Lusaka at 1.3 percent. However, Central Copperbelt, Eastern, Luapula, Northern, and Western Provinces had less than 1.0 percent of households accessing water beyond 10 km.

Table 5.47: Distance to Sources of water for Livestock by Province, 2023

Province	Total number of Households Raising Livestock	Distance (km) to Source of Water				
		0-1 km	2-3 km	4-6 km	7-10 km	Over 10 km
	Number	Percent	Percent	Percent	Percent	Percent
Central	222,491	85.4	11.2	3.2	0.0	0.2
Copperbelt	159,217	89.1	7.4	2.0	0.7	0.8

Zambia	1,849,463	84.9	10.3	3.2	0.8	0.8

5.7.7 Access to Livestock Production Extension Services

Table 5.48 shows the number and percentage of households accessing livestock extension services by province. A total of 325,715 households, accounting for 17.6 percent of the livestock-raising households, accessed livestock extension services during the reference period.

Among provinces, Western recorded the highest percentage of households accessing livestock extension services at 31.0 percent followed by Eastern at 28.5 percent. North-western Province had the lowest percentage at 7.6 percent.

Table 5.48: Number and Percentage of Livestock-Raising Households Accessing Livestock Production Extension Services by Province, 2023

Province	Total number of Households Raising Livestock	Households Accessing Livestock Extension Services	
		Number	Percent
Central	222,491	31,241	14.0
Copperbelt	159,217	21,168	13.3
Eastern	291,209	83,138	28.5

Western	136,082	42,138	31.0
Zambia	1,849,463	325,715	17.6

5.7.8 Animal Health Extension Services by Province

Table 5.49 shows the percentage of livestock raising households accessing animal health extension services by province. At national level, 20.6 percent of the livestock-raising households accessed animal health extension services. At provincial level, Southern Province reported the highest percentage of households accessing animal health extension services at 34.5 percent while Luapula recorded the lowest at 7.0 percent.

Table 5.49: Number and Percentage of Livestock Raising Households Accessing Animal Health Extension Services, 2023

Province	Total number of Households Raising Livestock	Households Accessing Animal Health Extension Services	
		Number	Percent
Central	222,491	36,531	16.4
Copperbelt	159,217	21,714	13.6

North-western	104,975	8,842	8.4
Southern	326,489	112,673	34.5
Western	136,082	35,228	25.9
Zambia	1,849,463	380,301	20.6

5.7.9 Tick Control Methods by Households

Table 5.50 shows the percentage of livestock raising households using various methods of tick control by province. At national level, spraying using a knapsack was the most commonly used method for tick control at 15.4 percent among livestock raising households. This was followed by the traditional method at 9.9 percent while pour-on was the least at 1.2 percent. However, majority households (50.6 percent) involved in raising livestock did not practise any tick control methods.

Table 5.50: Number and Percentage of Households Using Various Methods of Tick Control by Province, 2023

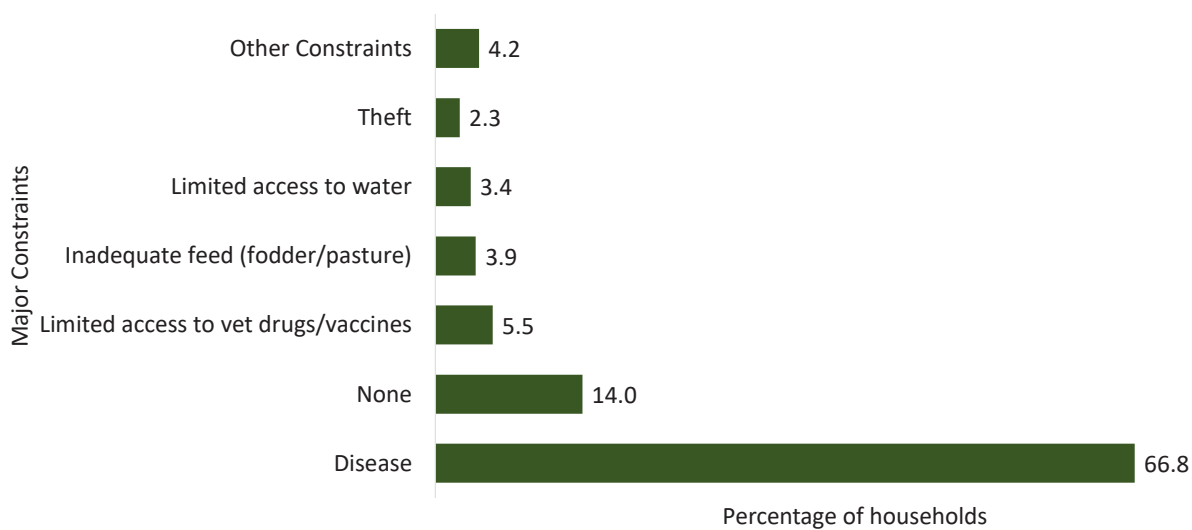

Province	Total number of Households Raising Livestock	Method of Tick Control								
		Dipping	Spraying using Spray race	Pour-on	Hand dressing	Traditional	Injectables	Spraying using knapsack	None	Other Methods

5.8 Major Constraints in Livestock Production

5.8.1 Major Constraints in Raising Cattle

Figure 5.5 shows the percentage of households that experienced constraints in cattle production. At national level, 66.8 percent of cattle-raising households reported disease as the major constraint, followed by limited access to vet drugs/vaccines at 5.5 percent. However, about 14.0 percent of households reported that they did not experience any major constraints in cattle production.

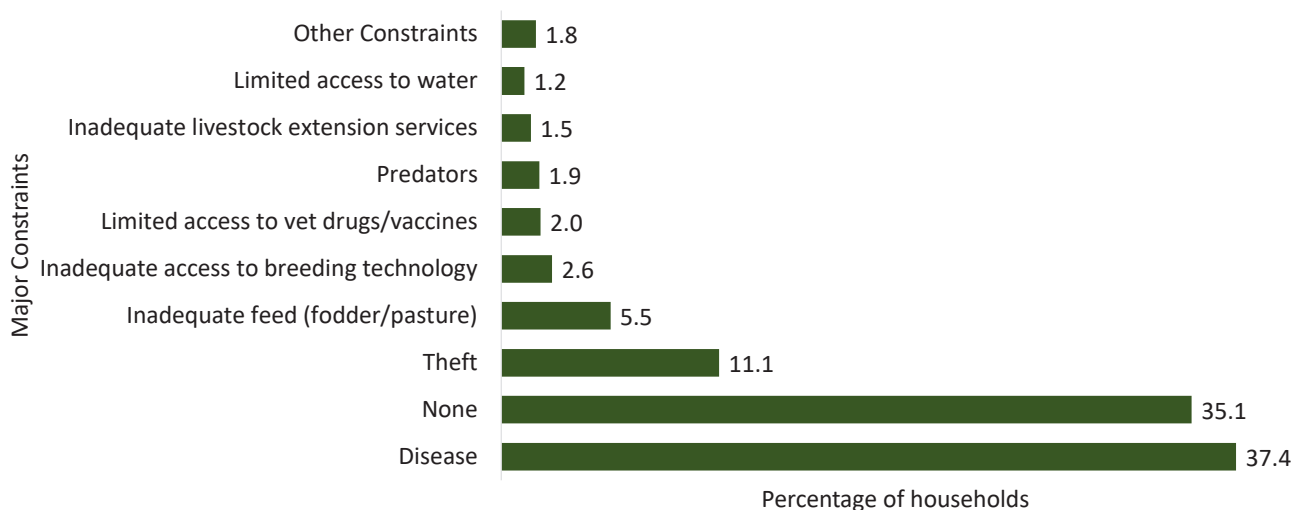

Figure 5.5: Percentage of households experienced major constraints in Cattle production, 2023

5.8.2 Major Constraints in Raising Goats

Figure 5.6 shows the percentage of households that experienced major constraints in goat production. Disease was reported as the major constraint faced by the goat-raising households at 37.4 percent, followed by thefts at 11.1 percent. However, about 35.1 percent of households did not experience any constraints in goat production.

Figure 5.6: Percentage of households experienced major constraints in Goat production, 2023

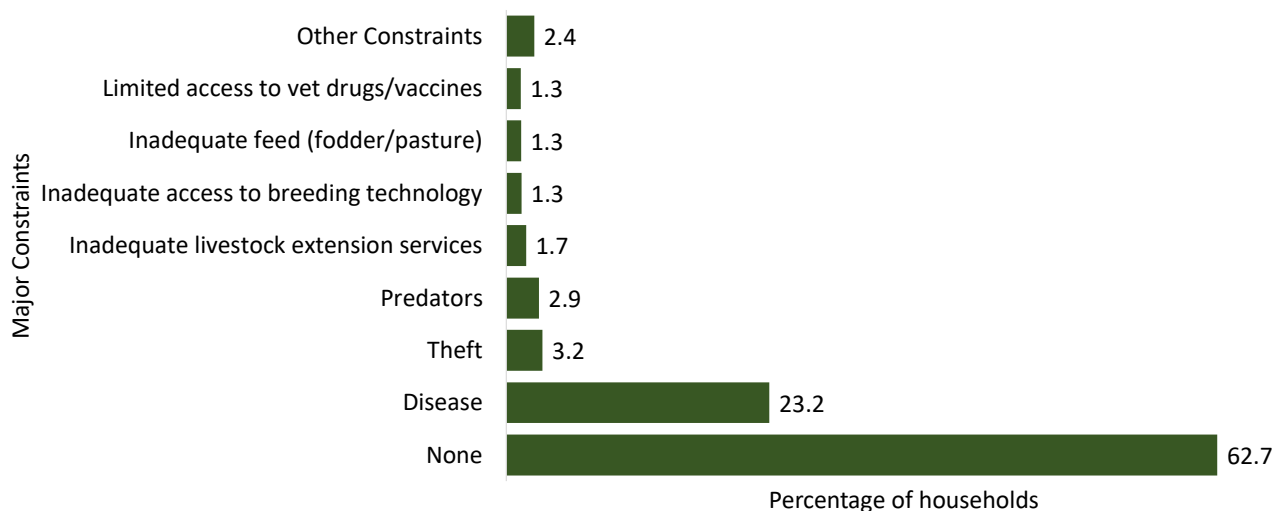

5.8.3 Major Constraints in Raising Sheep

Figure 5.7 shows the percentage of households that experienced major constraints in sheep production. Disease was reported as the major constraint faced by the sheep-raising households at 23.2 percent, followed by thefts at 3.2 percent. However, about 62.7 percent of households did not experience any constraints in sheep production.

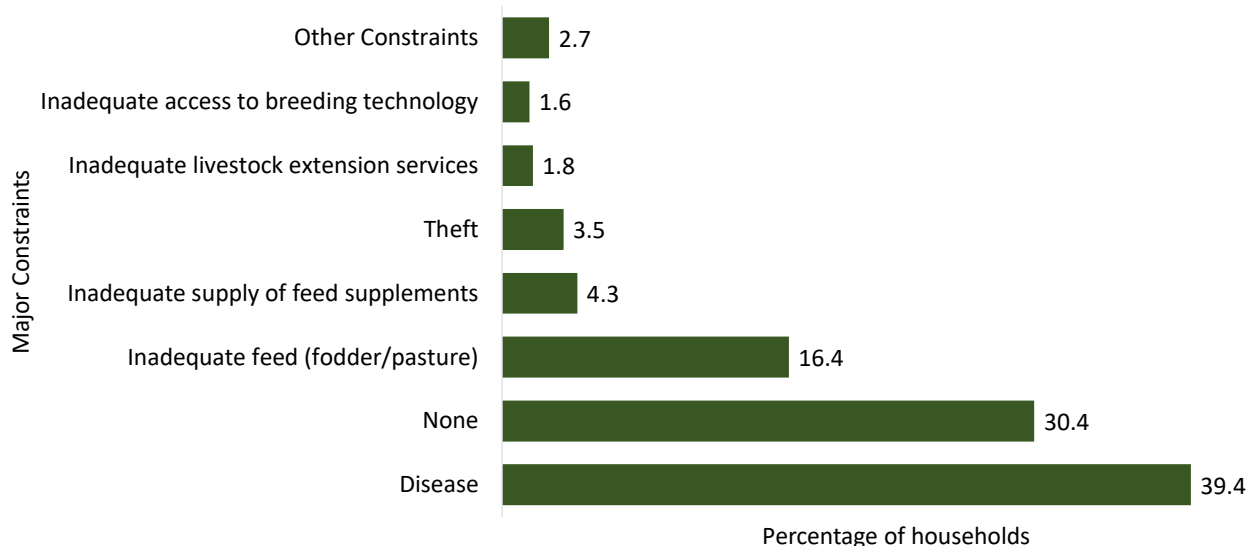

Figure 5.7: Percentage of Households Experienced Major Constraints in Sheep Production, 2023

5.8.4 Major Constraints in Raising Pigs

Figure 5.8 shows the percentage of households that experienced major constraints in pig production. Disease was reported as the major constraint faced by the pig-raising households at 39.4 percent, followed by inadequate feed (Fodder/Pasture) at 16.4 percent. However, 30.4 percent of households did not experience any constraints in sheep production.

Figure 5.8: Percentage of Households Experienced Major Constraints in Pigs Production, 2023

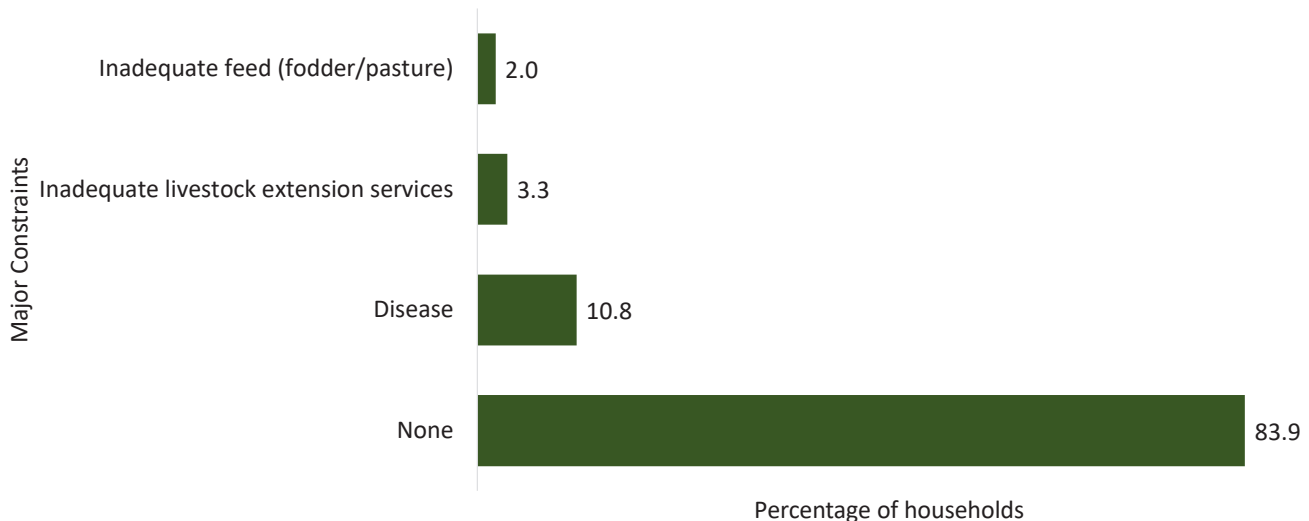

5.8.5 Major Constraints in Raising Donkeys

Figure 5.9 shows the percentage of households that experienced major constraints in donkey production. Disease was reported as the major constraint faced by the donkey-raising households at 10.5 percent, followed by inadequate livestock extension services at 3.3 percent.

Figure 5.9: Percentage of Households Experienced Major Constraints in Donkey Production, 2023

5.8.6 Livestock Theft

The number of households that reported theft of livestock as a major constraint by province are presented in Table 5.51. Households that raised goats were the most affected by theft, this was followed by those who were raising cattle. Southern and Eastern provinces had the highest number of households affected by theft, while Western Province had the least number of Households that reported theft as a major constraint.

Table 5.51: Livestock-Theft by Province, 2023

Province	Cattle	Goats	Sheep	Pigs	Total
Central	82	2,381	52	1,574	4,089
Copperbelt	0	4,636	268	144	5,048
Eastern	5,515	18,544	385	1,026	25,470
Luapula	0	7,000	0	686	7,687

Zambia	12,476	80,118	1,356	9,516	103,466

Chapter 6 : ANIMAL REPRODUCTION AND HEALTH

This chapter presents households engaged in animal reproduction. It covers animal reproduction practices for the four major livestock types; Cattle, Goats, Sheep and Pigs. Note that controlled breeding practices are discussed only for cattle where it was practised and not in any other types of livestock.

6.1 Households Engaging in Reproduction Practices for Cattle

Table 6.1 shows the distribution of cattle raising households that practised controlled breeding. At national level, 7.0 percent of cattle raising households practised controlled breeding. Within provinces, Copperbelt was the highest at 32.0 percent, followed by Muchinga province at 18.0 percent. Northern Province did not record any cattle raising households that practised controlled breeding.

Table 6.1: Number and Percentage of Cattle Raising Households Practising Controlled Breeding in Cattle by Province, 2023

Province	Total Number of Households Raising Cattle	Households Practising Controlled Breeding	
		Number	Percent
Central	71,497	4,393	6.1
Copperbelt	24,675	7,899	32.0
Eastern	166,184	3,757	2.3
Luapula	977	89	9.1
Lusaka	13,871	515	3.7
Muchinga	19,178	3,447	18.0
Northern	6,069	0	0.0
North Western	14,853	396	2.7
Southern	168,608	16,556	9.8
Western	49,458	597	1.2
Zambia	535,371	37,647	7.0

Table 6.2 shows the distribution of cattle raising households that practised controlled mating. At national level, 37.8 percent of cattle raising households practised natural mating (Sire/bull selected from within the herd), followed by natural mating (Sire/bull/hired/borrowed) at 33.9 percent.

Natural Mating (Sire/Bull Selected from within the Herd) was mostly practiced by cattle raising households in Luapula Province at 100 percent. Communal Sire was mostly practiced by cattle raising households in Muchinga Province at 43.9 percent. Natural Mating (Sire/Bull/Purchased) was mostly practiced by cattle raising households in Central Province at 37.2 percent. Natural Mating (Sire/Bull/Hired/Borrowed) was mostly practiced in Southern Province at 47.7 percent. Further, Artificial insemination was mostly practiced in Copperbelt Province at 3.4 percent.

**Table 6.2: Number of Cattle Raising Households Practicing Controlled Mating by Province , 2023**

Province	Total Number of Households Raising Cattle	Households Practicing Controlled Breeding	Methods of controlled mating					
			Natural Mating (Sire/ Bull Selected from Within the Herd)	Communal Sire	Natural Mating (Sire/ Bull Purchased)	Natural Mating (Sire/ Bull Hired/ Borrowed)	Artificial Insemination	Other
			Percent	Percent	Percent	Percent	Percent	Percent
Central	71,497	4,393	17.4	24.2	37.2	19.7	0.0	1.4
Copperbelt	24,675	7,899	50.3	12.3	3.3	30.6	3.4	0.0
Eastern	166,184	3,757	57.2	0.5	10.4	28.8	3.1	0.0
Luapula	977	89	100.0	0.0	0.0	0.0	0.0	0.0
Lusaka	13,871	515	97.3	0.0	0.0	0.0	2.7	0.0
Muchinga	19,178	3,447	47.6	43.9	1.9	6.6	0.0	0.0
Northern	6,069	0	0.0	0.0	0.0	0.0	0.0	0.0
North Western	14,853	396	63.0	0.0	0.0	37.0	0.0	0.0
Southern	168,608	16,556	27.4	18.2	3.8	47.7	3.0	0.0
Western	49,458	597	54.6	23.0	0.0	22.4	0.0	0.0
Zambia	535,371	37,647	37.8	17.8	7.9	33.9	2.4	0.2

Table 6.3 shows the distribution of households practising Artificial Insemination (AI) by source of semen and province. A total number of 889 households in the country were practising Artificial insemination. Of this total, 77.2 percent of households sourced the semen from private suppliers. Households that practised AI in Eastern Province sourced the semen from government, while those on the Copperbelt sourced the semen from the private suppliers. In Lusaka Province, the main source of semen was cooperatives, while the majority of households in Southern Province sourced it from private suppliers.

Table 6.3: Number and Percentage of households practising Artificial Insemination by Source of Semen and Province, 2023

Province	Number of Households Practicing Artificial Insemination	Main Source of Semen		
		Government	Private	Cooperatives
		Number	Number	Number
Copperbelt	268	0.0	100.0	0.0
Eastern	117	100.0	0.0	0.0
Lusaka	14	0.0	0.0	100.0
Southern	490	14.7	85.3	0.0
Zambia	889	21.2	77.2	1.6

6.2 Number of Households involved in Vaccination against Selected Diseases

Table 6.4 shows the distribution of households that were vaccinated against Newcastle Disease. A total of 225,994 households vaccinated their chickens against Newcastle Disease. Southern Province recorded the highest percentage at 30.4 percent, followed by Eastern Province at 25.4 percent. North-western had the lowest with 2.1 percent of households.

Table 6.4: Number and Percentage of Households that Vaccinated against Newcastle Disease by Province, 2023

Province	Households Involved in Vaccination	Households Involved in Vaccination Against Newcastle Disease		
	Number	Percent	Number	Percent
Central	39,821	8.7	16,186	7.2
Copperbelt	33,084	7.3	15,498	6.9
Eastern	108,258	23.7	57,469	25.4
Luapula	17,217	3.8	14,282	6.3
Lusaka	25,868	5.7	15,564	6.9
Muchinga	12,982	2.8	5,901	2.6
Northern	20,635	4.5	17,728	7.8
North-western	10,269	2.3	4,654	2.1
Southern	151,459	33.2	68,708	30.4
Western	36,538	8.0	10,002	4.4
Zambia	456,130	100.0	225,994	100.0

6.3 Vaccinations against Selected Livestock Diseases

Table 6.5 shows the number of households that vaccinated their animals against selected livestock diseases. The table shows that, out of the 1,848,683 livestock raising households in the country, 456,130 households were involved in vaccinating their animals against selected livestock diseases.

Southern Province had the highest number of households that vaccinated their livestock against Black Quarter (BQ) (Black leg), Haemorrhagic Septicemia (HS), East Coast Fever (ECF)/Corridor Disease, Foot and Mouth Disease (FMD), Anthrax at 59.2, 66.2, 46.4, 44.3 and 37.7 percent, respectively.

Table 6.5: Number and Percentage of Households that Vaccinated against Selected Livestock Diseases by Province, 2023

Province	Total number of Households Raising Livestock	Households Involved in Vaccination Against the selected livestock diseases	Vaccinated Diseases									
			Black Quar-ter (BQ) (Black leg)	Haem-orrhagic septicemia (HS)	East Coast Fever (ECF)/ Corridor Disease	Contagious Bovine pleu-ro-pneumo-nia (CBPP)	Foot and Mouth dis-ease (FMD)	Anthrax	Brucellosis	Lumpy skin disease (LSD)	Rabies	Other dis-eases
	Number	Number	Percent	Percent	Percent	Percent	Percent	Percent	Percent	Percent	Percent	Percent

6.4 Major Diseases Affecting Livestock

Figure 6.1 shows the percent distribution of households by major diseases that affected cattle. The majority of cattle raising households reported that they were affected by Foot and Mouth Disease (FMD) at 21.6 percent, followed by East Coast Fever (ECF)/Corridor at 19.3 percent.

Figure 6.1: Major Diseases Affecting Cattle Raised by Households, 2023

Figure 6.2 shows the percent distribution of households by major diseases that affected goats. The majority of goat raising households reported that they were affected by Mange at 20.5 percent, followed by Cowdriosis (Heart water) at 17.8 percent.

Figure 6.2: Major Diseases Affecting Goats raised by Households, 2023

Figure 6.3 shows the percent distribution of households by major diseases that affected sheep. The majority of sheep raising households reported that they were affected by Helminthiasis at 21.3 percent, followed by Cowdriosis (Heart water) at 14.0 percent. About 22.4 percent of the households reported that they did not know the diseases that affected their sheep.

Figure 6.3: Major Diseases Affecting Sheep raised by Households, 2023

Figure 6.4 shows the percent distribution of households by major diseases that affected pigs. The majority of pig raising households reported that they were mostly affected by African Swine Fever (ASF) at 61.4 percent, followed by Helminthiasis at 5.3 percent. Approximately 16 percent of the households reported that they did not know the disease that affected the pigs.

Figure 6.4: Major Diseases Affecting Pigs raised by Households, 2023

Figure 6.5 shows the percent distribution of households by major diseases that affected donkeys. The majority of donkey raising households reported that they were affected by Foot Rot at 9.1 percent, followed by Mange at 5.9 percent. A majority of the households (53.5%) reported that they did not know the diseases that affected their donkeys.

Figure 6.5: Major Diseases Affecting Donkeys raised by Households, 2023

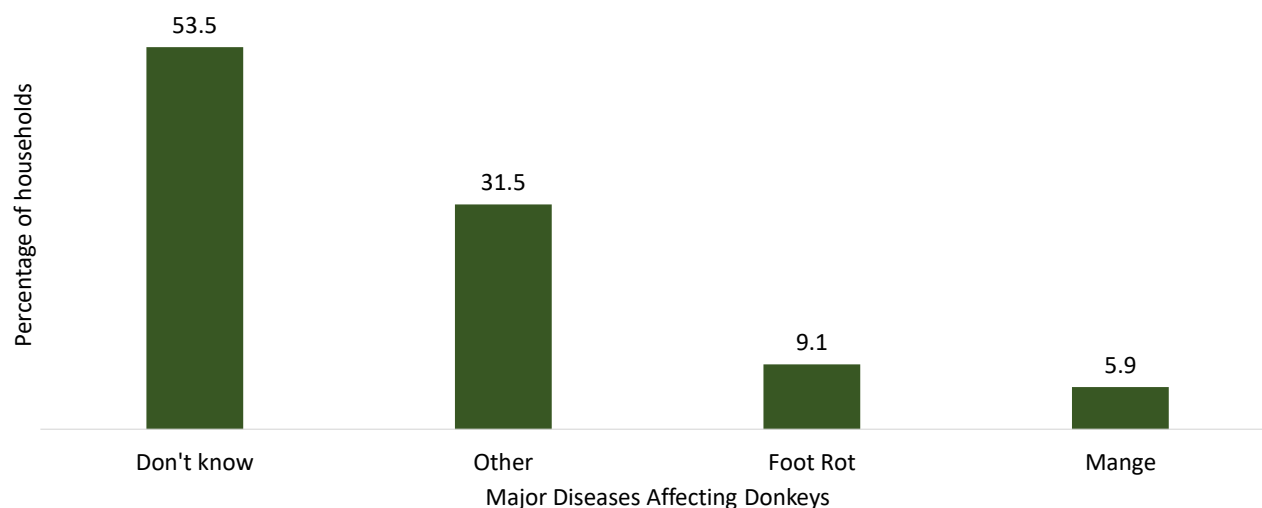

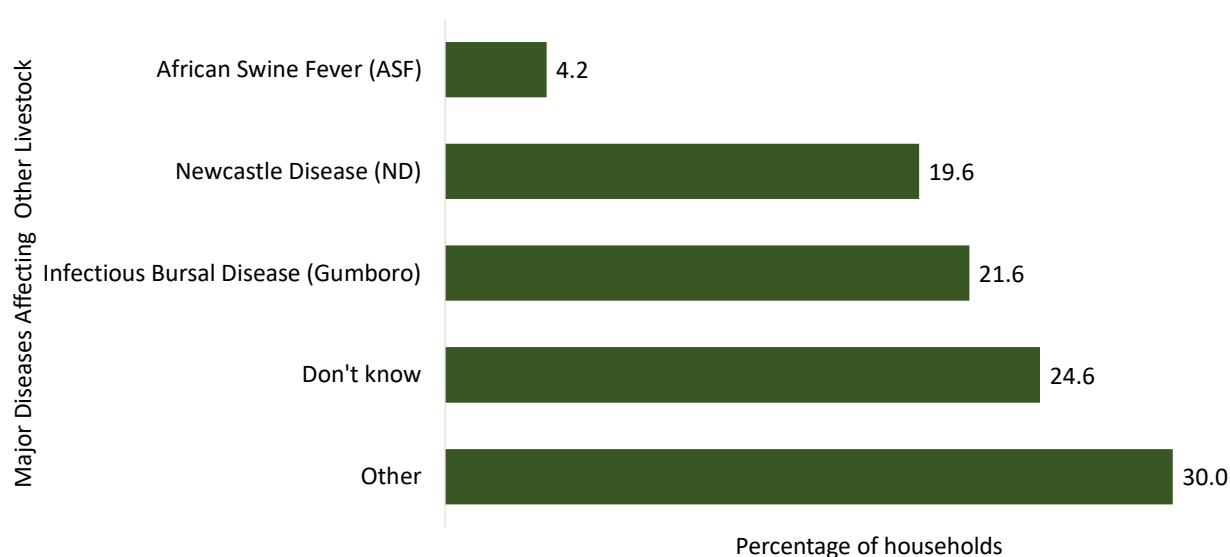

Figure 6.6 shows the percent distribution of households by major diseases that affected their livestock. The majority of other livestock raising households reported that their animals were affected by Infectious Bursal Disease (Gumboro) at 24.6 percent, followed by Newcastle Disease at 19.6 percent while 24.6 percent reported that they did not know the diseases that affected their livestock.

Figure 7.6: Major Diseases Affecting Other Livestock raised by Households, 2023

Chapter 7: Animal Draught Power

This chapter highlights survey results on the usage of animal draught power by households during the reference period. The type of livestock used and purpose of draught power are discussed under this chapter.

7.1 Number of households using Animal Draught Power

Table 7.1 shows the number of households using animal draught power. Of the 447,160 households using animal draught power in the country, 446,931 used cattle while 229, used donkeys.

Southern Province had the highest number of households using cattle for animal draught power with 32.7 percent, followed by Eastern at 32.0 percent. Luapula was the lowest with 0.04 percent. While the use of cattle as draught power was highest in Eastern and Southern Provinces, donkeys were used for draught power only in Eastern and Southern Provinces at 42.1 and 57.9 percent, respectively.

Table 7.1: Number of households using Animal Draught Power by Province, 2023

Province	Total number of households using Animal Draught Power	Type of Animal			
		Cattle		Donkey	
		Number of households	Percent	Number of households	Percent
Central	64,861	64,765	14.5	96	42.1
Copperbelt	21,269	21,269	4.8	0	0.0
Eastern	143,220	143,220	32.0	0	0.0

North-western	10,895	10,895	2.4	0	0.0
Southern	146,480	146,347	32.7	133	57.9
Western	41,624	41,624	9.3	0	0.0
Zambia	447,160	446,931	100.0	229	100.0

7.2 Purpose of Animal Draught Power

Table 7.2 shows the number of households using animal draught power for various purposes by province. Out of the total of 447,160 households that used animal draught power in the country, Southern Province had the highest percentage of households using animal draught Power for transport purposes at 45.5 percent while Northern had the lowest at 1.1 percent. Eastern Province had the highest percentage for crop production (ploughing, planting, weeding, threshing, milling) purpose at 35.1 percent. Southern Province had the highest percentage for both transport and crop agriculture purposes at 34.4 percent.

Table 7.2: Number and Percentage of Households Using Animal Draught Power for Various Purposes, 2023

Province	Total Number of Households using Animal Draught Power		Purpose of Animal Draught Power							
			Transport		Crop Agriculture (Ploughing, Planting, Weeding, Threshing, Milling)		Transport and crop agriculture		Other Uses	
	Number	Percent	Number	Percent	Number	Percent	Number	Percent	Number	Percent

A total of 241,801 households hired out Animal Draught Power in the Country. Eastern Province recorded the highest number of households hiring Cattle for Draught Power at 36.0 percent, followed by Southern Province at 28.7 percent. Luapula Province was the lowest at 0.1 percent.

Donkeys were hired out for Draught Power only in Eastern and Southern Province. A total of 204 households hired Donkey for Draught Power in the country. Southern Province recorded 52.5 percent while Eastern Province recorded 47.1 percent.

Table 7.3: Number and Percentage of Households Hiring out Animals for Draught Power, 2023

Chapter 8 : Milk Production and Sales (Fresh and Sour)

This section presents results for fresh milk production and sales as well as sales of sour milk from both households and establishments during the reference period.

8.1: Milk Production in Litres by Households and Establishments by Province

Table 8.1 shows that a total 290,827,428 Litres of milk was produced by both households and establishments during the reference period out of which households contributed the majority (234,118,524 litres). Among provinces, the highest quantity of milk produced was reported from Southern at 97,718,009 Litres followed by Copperbelt and Central at 84,520,262 litres and 58,851,519 litres respectively while Luapula was lowest at 20,756 litres.

Table 8.1: Quantity of Milk Produced in Litres by Households and Establishments by Province, 2023

Province	Milk Production (Litres)		
	Households	Establishments	Total Milk Production
Central	28,383,236	30,468,283	58,851,519
Copperbelt	80,530,201	3,990,061	84,520,262
Eastern	8,522,196	1,406	8,523,602
Luapula	-	20,756	20,756
Lusaka	9,307,967	4,966,065	14,274,032
Muchinga	10,641,786	19,451	10,661,237
Northern	620,838	91,532	712,370
North-Western	836,607	23,834	860,441
Southern	80,915,723	16,802,286	97,718,009
Western	14,359,969	325,230	14,685,199
Zambia	234,118,524	56,708,904	290,827,428

Figure 8.1 shows the monthly trend of milk produced by households and establishments in the period May, 2022 to April 2023. Overall, the highest quantity of milk was produced in the month of February, 2023 at 32,431,128 litres and 14,658,155 litres reported in October, 2022 was lowest. Milk production under households fluctuated with seasonal changes recording as low as 10.2 million litres to as high as 28.4 million litres. On the other hand, production under establishments was stable throughout the reference period fluctuating between 4.1 million Litres and 5.3 Million Litres.

Figure 8.1: Monthly Trends of Quantity of Milk Produced in Litres by Households and Establishments by Province, 2023

8.2: Milk Production from Households

Table 8.2 shows the milk production trends during low (August to October), moderate (May to July) and high (November to April) production months during the reference period. During the low production month, a total of 36,027,907 litres was produced by households. The production during the moderate and high months stood at 96,498,845 litres and 101,591,773 litres respectively.

Table 8.2: Quantity of Milk Produced during Low, Moderate and High Months in Litres by Households, 2023

Province	Low Month	Moderate Month	High Month	Total Milk Production
Central	5,178,838	9,668,436	13,535,962	28,383,236
Copperbelt	6,039,746	47,305,582	27,184,873	80,530,201
Eastern	3,350,772	4,815,234	356,189	8,522,196
Luapula	-	-	-	-
Lusaka	849,476	5,396,862	3,061,630	9,307,967
Muchinga	2,160,984	4,344,947	4,135,855	10,641,786
Northern	0	620,838	0	620,838
North-Western	86,217	111,784	638,606	836,607
Southern	15,559,024	19,916,641	45,440,059	80,915,723
Western	2,802,849	4,318,521	7,238,599	14,359,969
Zambia	36,027,907	96,498,845	101,591,773	234,118,524

Table 8.3 shows that at national level, the highest monthly quantity of milk produced was reported in February at 27,982,536 litres followed by January at 28,367,142 litres and the lowest was 10,162,546 litres in October. Among provinces, Southern recorded the highest milk production at 80,915,723 litres followed by Copperbelt and Central at 80,530,201 litres and 28,383,236 litres respectively. Luapula Province did not report any milk produced by the households.

Table 8.4 shows that the national average milk yield was 1.7 litres per cow per day with a total of 378,428 milking cows. Among provinces, Copperbelt recorded the highest yields at 4.3 litres followed by Lusaka and Northwestern at 3.9 litres and 2.7 litres respectively. Southern Province reported the highest number of milking cows (184,908) followed by Copperbelt and Western with 51,181 and 48,871 milking cows, respectively.

Table 8.4: Milk production parameters (Average Milk Yield per Cow/day), 2023

Table 8.5 shows the quantity of fresh milk sold by households during the reference period. At national level, a total of 96,855,686 litres of fresh milk was sold. The highest quantity of fresh milk sales was recorded in February at 11,370,157 litres followed by January and March at 13,970,428 litres and 10,277,620 litres, respectively.

Among provinces, Copperbelt Province reported the highest quantity of fresh milk sales at 55,774,416 litres followed by Southern at 29,051,771 litres while Luapula and Northern provinces did not report sales of fresh milk.

A total of 7,333,792 litres of sour milk was sold by households as indicated in Table 8.6. The quantities of sour milk sales were highest during the high milk production period with April 2023 leading at 951,208 litres followed March and February, 2023 at 945,730 litres and 945,433 litres respectively. The lowest quantities of sour milk sales were reported in November, 2022.

Among provinces, Southern posted the highest quantity of sour milk sales at 2,884,431 litres followed by Copperbelt and Western at 1,855,224 litres and 1,284,483 litres respectively. Meanwhile, there were no sour milk sales reported in Luapula and Northern Provinces during the period under review.

8.3: Milk Production from Establishments

Table 8.7 shows the monthly quantity of milk produced in litres by establishments between May, 2022 and April 2023 under which a total of 56,708,904 litres was produced. The highest milk quantity was produced in December 2022 at 5,349,443 litres followed by June and May, 2022 at 5,320,844 and 5,238,494 litres respectively and the lowest in April, 2023 at 4,315,013 litres.

Among provinces, Central produced the highest quantity of fresh milk at 30,468,283 litres followed by Southern and Lusaka at 16,802,286 litres and 4,966,065 litres respectively. The lowest was Eastern Province at 1,406 litres.

Chapter 9: Poultry Production

Chapter 9 discusses statistics on poultry production. Specifically, discussed are: the number of poultry raised; number of households raising poultry type; number of poultry type raised by households; the number of Poultry type raised by female household members; and the average number of poultry types raised.

9.1 Number of Various Types of Poultry Raised by Households

Table 9.1 shows the various types of poultry raised as at 30th April, 2023. Of the total number of poultry raised by households, village chickens (free range) accounted for the largest number at 26,162,649 followed by broiler chickens (5,325,381) while the lowest were the quails at 101,854.

Table 9.1: Number of Poultry Raised, 2023

Poultry Type	Number
Village Chickens	26,162,649
Broiler Chickens	5,325,381
Layer Exotic Chickens	2,065,451
Ducks	1,644,821
Turkeys	154,126
Guinea fowls	1,105,052
Pigeons	1,894,672
Quails	101,854
Rabbits	369,587

9.2 Number of Households raising Various Types of Chickens

Table 9.2 shows the number and percentage of households raising chickens by province as at 30th April, 2023. At national level, the number of households raising village chicken was the highest at 1,682,160 followed by the number of those raising broiler chickens at 46,927. The number of households raising layers was the least at 21,105.

Out of the total number of Households raising village chickens, Southern Province accounted for the largest percentage at 18.3 percent, followed by Eastern at 15.2 percent. Lusaka Province recorded the lowest at 5.2 percent.

Copperbelt Province accounted for the largest percentage of households raising broiler chickens at 26.7 percent, followed by Lusaka at 20.0 percent. Western Province recorded the lowest percentage at 1.0 percent.

Among layer chicken-raising households, Southern Province accounted for the highest percentage of 50.4, followed by Luapula at 12.3 percent. Muchinga Province recorded the lowest at 0.3 percent.

Table 9.2: Number and Percentage of households Raising Chickens by Province, 2023

Province	Village Chickens		Broiler Chickens		Layer Chickens	
	Number of households	Percent	Number of households	Percent	Number of households	Percent

9.3. Chicken Population

9.3.1 Number of Village Chickens Raised by Households and Establishments

Table 9.3 shows the number of village chickens raised by households and establishments as at 30th April 2023. At national level, the total number of village chickens (free range) raised by both households and establishments was 26,162,649. Of this, 26,086,919 were raised by households while 75,730 were raised by establishments. Southern Province accounted for the highest percentage at 20.1 percent of the total village chickens, followed by Eastern at 12.3 percent. North-Western Province accounted the lowest share at 5.20 percent.

Table 9.3: Number of Village Chickens Raised by Province, 2023

Province	Number of Village Chickens		Total	
	Households	Establishments	Number	Percent
Central	3,734,050	25,758	3,759,808	14.4
Copperbelt	3,141,389	8,499	3,149,889	12.0
Eastern	3,214,450	3,178	3,217,628	12.3
Luapula	1,401,232	2,164	1,403,396	5.4
Lusaka	2,144,031	8,034	2,152,065	8.2

Zambia	26,086,919	75,730	26,162,649	100.0

9.3.2 Number of Broiler Chickens Raised by Households and Establishments

Table 9.4 shows the number of broiler chickens raised by households and establishments by province as at 30th April 2023. At national level, a total of 5,325,381 broiler chickens were raised by both households and establishments. Of this total, 4,380,577 were raised by households while 944,804 were raised under establishments. Lusaka Province accounted for the highest percentage at 50.3 percent of the total broiler chickens, followed by Copperbelt at 23.0 percent. Western and Eastern Provinces accounted for the lowest percentage contribution at 0.7 percent each.

Table 9.4: Number of Broiler Chickens Raised by Province, 2023

Province	Number of Broiler chickens		Total	
	Households	Establishments	Number	Percent
Central	237,596	89,839	327,434	6.1
Copperbelt	1,100,902	125,737	1,226,639	23.0

9.3.3 Number of Layer Chickens Raised by Households and Establishments

Table 9.5 shows the number of layer chickens by province raised by households and establishments as at 30th April 2023. At national level, the total number of layer chickens raised by both households and establishments was 2,127,690. Of this total, 880,762 were raised by households while 1,246,928 were raised under establishments. North- Western Province accounted for the highest percentage at 29.1 percent of the total layer chickens, this was followed by Lusaka Province at 24.1 percent. Muchinga Province accounted for the lowest percentage at 0.2 percent.

Table 9.5: Number of Layer Chickens Raised by Province, 2023

Province	Number of Layer chickens		Total	
	Households	Establishments	Number Raised	Percent
Central	52,790	73,278	126,068	5.9

9.4 Average Number of Chickens Raised Per household

Table 9.6 shows the average number of chickens raised per household by type and province as at 30th April 2023. At national level, the average number of village chickens raised per household was 16, broiler chickens was 93 and 42 for layer chickens.

Lusaka Province reported the highest average number of village chickens raised per household at 24 chickens. Among broiler and layer chicken raising households, North-Western Province reported the highest average number at 228 and 208 chickens, respectively.

Table 9.6: Average Number of Chickens Raised Per Household by Province, 2023

Province	Chickens Raised Per Household

9.5 Chicken Ownership by Female Members of the Household

This section present statistics on chicken ownership. Specifically, these are number of village chicken, broilers and layers owned by households and female members of the household.

9.5.1 Village Chicken Ownership by Female Members of Household

Table 9.7 shows the distribution of village chickens raised and ownership status by province as at 30th April, 2024. Overall, 92.7 percent of the village chickens in Zambia (24,188,950) were owned by households raising them. Of this number, female members of the households owned 49.2 percent, while 50.8 percent were owned by male members of the households.

Western Province recorded the highest share of village chickens owned by female members of the households at 68.7 percent of the total chickens owned by households in the province. The lowest share of chickens owned by female members of the households was recorded in Copperbelt Province at 34.4 percent.

Table 9.7: Village Chicken Ownership by Female Members of Households, 2023

Province	Village Chickens raised				
	Raised by Households	Owned by Household Members		Owned by Females Household Members	
	Number	Number	Percent	Number	Percent
Central	3,734,050	3,469,113	92.9	2,045,143	59.0
Copperbelt	3,141,389	2,955,038	94.1	1,017,660	34.4
Eastern	3,214,450	2,500,643	77.8	1,272,328	50.9
Luapula	1,401,232	1,373,838	98.0	889,568	64.8
Lusaka	2,144,031	1,953,902	91.1	857,579	43.9

North-western	1,358,993	1,299,645	95.6	754,963	58.1
Southern	5,245,636	5,083,937	96.9	2,611,901	51.4
Western	1,429,250	1,416,943	99.1	973,675	68.7
Zambia	26,086,919	24,188,950	92.7	11,901,208	49.2

9.5.2 Broiler Chicken Ownership by Female Members of Households

Table 9.8 shows the distribution of broiler chickens raised and ownership status by province. Overall, 89.5 percent of the broiler chickens in Zambia (3,919,584) were owned by households raising them as at 30th April 2023. Of this number, female members of the households owned 41.5 percent, while 58.5 percent were owned by male members of the households.

Lusaka Province recorded the highest share of broiler chickens owned by female members of the households at 56.5 percent of the total chickens owned by households in the province. The lowest share of broiler chickens owned by female members of the households was recorded in North-Western Province at 8.5 percent.

Table 9.8: Broiler Chickens Ownership by Female Members of Households, 2023

Province	Broiler Chickens raised				
	Raised by Households	Owned by Households		Owned by Females Household Members	
	Number	Number	Percent	Number	Percent
Central	237,596	165,687	69.7	58,451	35.3

Zambia	4,380,577	3,919,584	89.5	1,626,689	41.5

9.5.3 Layer Chicken Ownership by Female Members of Households

Table 9.9 shows the distribution of layer chickens raised by households and ownership status by province. Overall, 82.4 percent of the layer chickens in Zambia (725,436) were owned by households raising them as at 30th April 2023. Of this number, female members of the households owned 35.7 percent.

Table 9.9: Layer Chickens Ownership by Female Members of Households, 2023

9.6 Other Poultry

Table 9.10 shows that a total of 1,644,821 ducks were raised by households and establishments as at 30th April, 2023. Of this total, 1,641,387 were raised by households while 3,434 were raised by establishments. Southern Province posted the highest number at 371,582 of the total ducks raised, followed by Eastern at 233,691. Western Province reported the lowest number at 89,047.

Table 9.10: Number of Ducks raised by Households and Establishments by Province, 2023

9.7 Major Constraints Affecting Poultry Production

Figure 9.1 shows the major constraints faced by village chicken-raising households. The highest percentage of households reported disease as a major constraint in poultry production at 75.6 percent. This was followed by theft (4.1%) and predators (3.8%).

Figure 9.1: Major Constraints Faced by Village Chicken-Raising Households, 2023

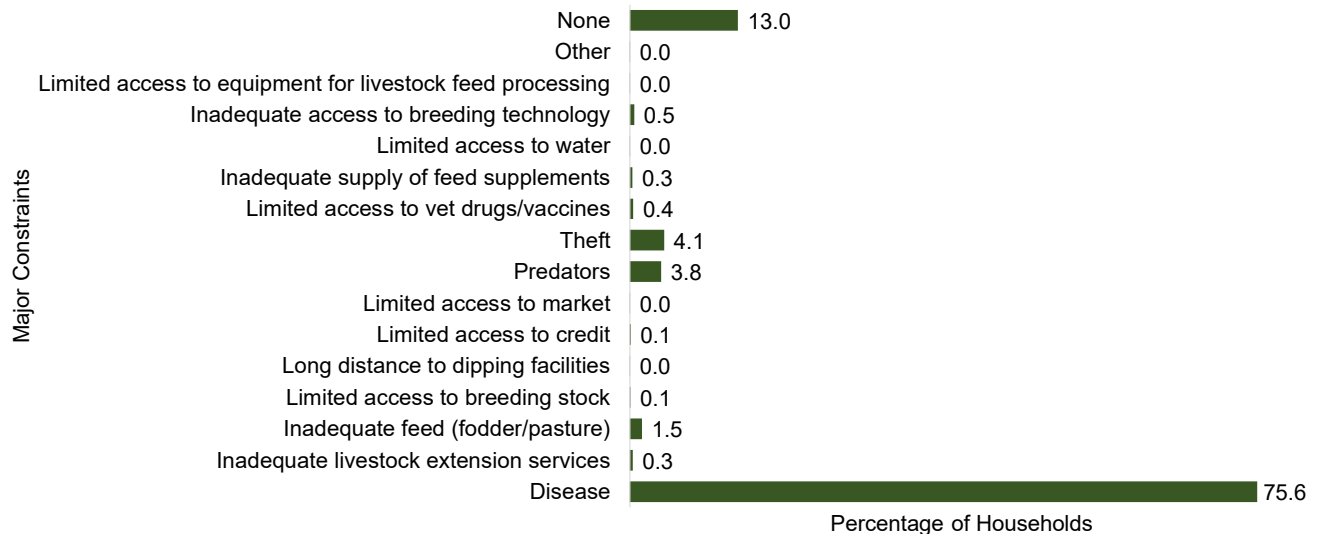

Figure 9.2 shows the major constraints faced by broiler chicken-raising households. Disease was reported as the major constraint faced by broiler chicken-raising households at 41.6 percent, followed by inadequate feed (fodder/pasture) at 9.4 percent. About 31.5 percent of the households reported that they did not face any major constraint.

Figure 9.2: Major Constraints Faced by Broiler Chicken-Raising Households, 2023

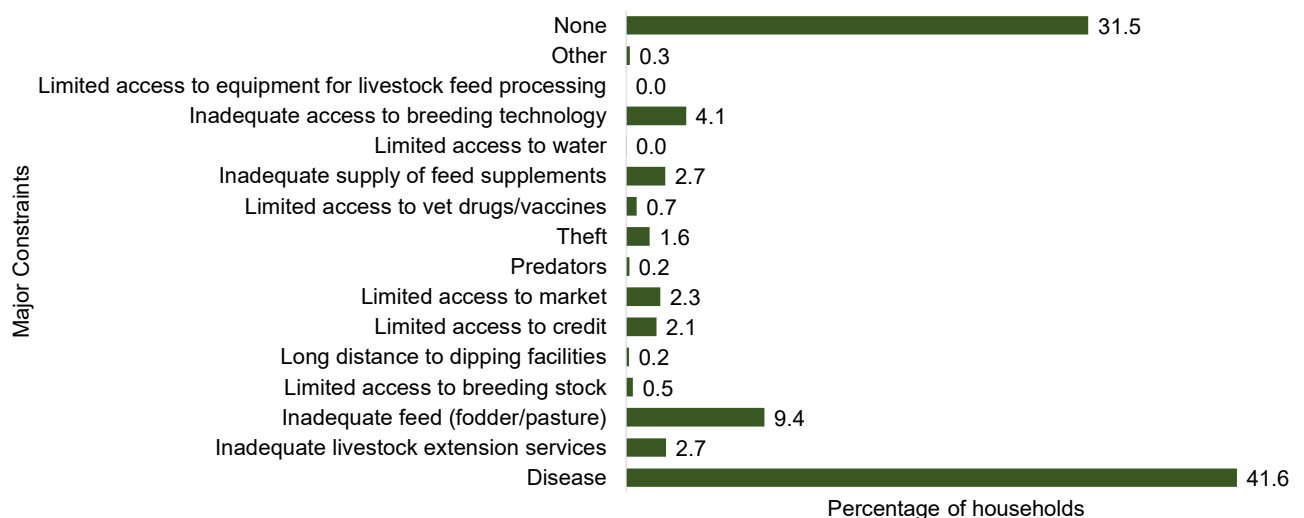

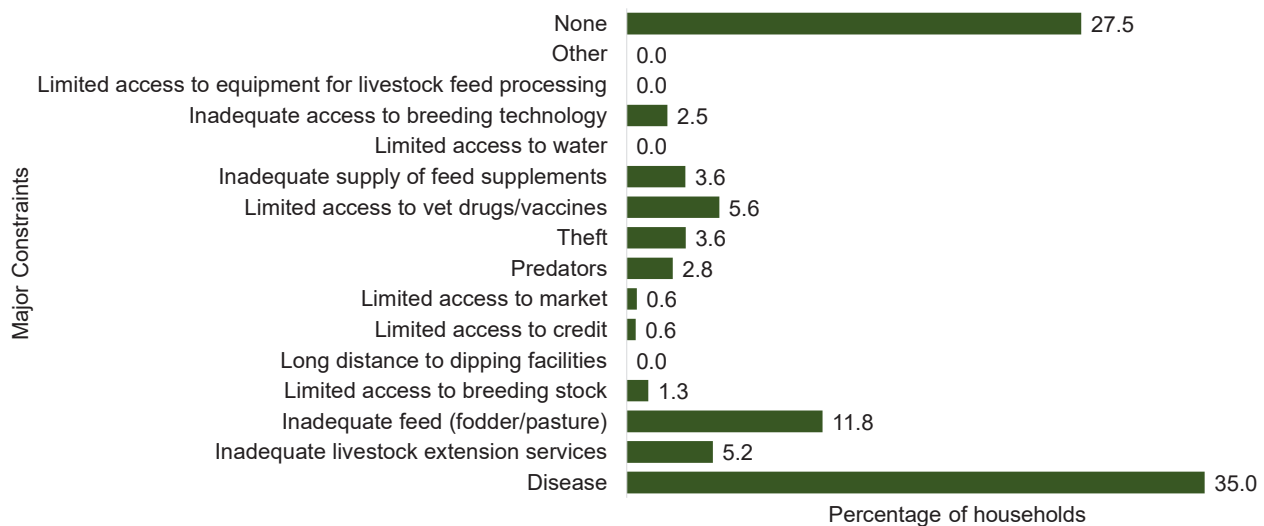

Figure 9.3 shows the major constraints faced by layer chicken-raising households. Disease was reported as the major constraint faced by layer chicken-raising households at 35 percent, followed by inadequate feed (fodder/pasture) at 11.8 percent. About 27.5 percent of the households did not report facing any major constraints

Figure 9.3: Major Constraints Faced by Layer Chicken-Raising Households, 2023

Chapter 10: Egg Production and Sales from Households

This Chapter discusses egg production from the village and exotic (improved) chickens by households at national level. The statistics reported include: the main purpose of egg production; the number of households involved in egg production; and productivity parameters vis-à-vis hatchability.

10.1 Households Engaged in Egg Production

Table 10.1 shows the number of households engaged in egg production by province as at 30th April, 2023. The egg production discussed under this chapter is from village chickens and other exotic (improved) chickens and excludes egg production from layer chickens. At national level, a total of 1,503,558 households were involved in egg production. Of this total, Southern Province accounted for the highest percentage of households involved in egg production at 19.8 percent followed by Eastern at 13.9 percent. Lusaka Province had the lowest percentage of households at 4.5 percent.

Table 10.1: Number and Percent of Households involved in Egg Production, 2023

Province	Number of Households	Percent
Central	194,089	12.9
Copperbelt	132,681	8.8
Eastern	209,088	13.9
Luapula	136,273	9.1
Lusaka	67,171	4.5
Muchinga	106,133	7.1
Northern	174,441	11.6
North-Western	83,092	5.5
Southern	297,387	19.8
Western	103,202	6.9
Zambia	1,503,558	100.0

10.2 The Main Purpose of Producing Eggs

Table 10.2 shows the main purpose of households involved in egg production as at 30th April, 2023. The main purpose of egg production was hatching (breeding) and this accounted for 94.9 percent of households involved in egg production from village chickens.

The main purpose of egg production from exotic (improved) chickens was for sale and this accounted for 47.2 percent.

Table 10.2: Number and Percent of Households involved in Egg Production by Main Purpose and Province, 2023

Province	Village Chickens	Exotic Chickens (Improved)						
	Number of Households	Hatching/ Breeding	Consump- tion	Sale	Number of Households	Hatching/ Breeding	Consump- tion	Sale
	Number	Percent	Percent	Percent	Number	Percent	Percent	Percent

10.3 Reproductivity Parameters of Village Chickens

Table 10.3 shows reproductivity parameters of village chickens by province, as at 30th April, 2023. At national level, a village chicken on average had 3 clutches in a year, with 12 eggs laid per clutch. Of the 12 eggs laid per clutch, 10 eggs hatched successfully and bringing the national average hatchability to 78.3 percent.

Table 10.3: Reproductivity Parameters of Village Chickens by Province, 2023

Province	Village Chicken			
	Average number of clutches per year	Number of eggs per clutch	Number of eggs that hatched	Hatchability (percent)
Central	3	13	10	78.7
Copperbelt	3	14	10	76.8

Muchinga	3	12	10	80.3
Northern	3	12	9	80.0
North-Western	3	12	10	80.3
Southern	3	13	10	79.2
Western	3	12	10	79.7
Zambia	3	12	10	78.3

10.4 Main Decision Making in Relation to the Sale of Eggs

Table 10.4 shows information on the main decision maker on the sale of eggs by households as at 30th April, 2023. From the 31,826 households that reported to have sold eggs, the main decision makers on the sale of eggs in a household were male spouses accounting for 49.3 percent, this was followed by female spouses at 30.1 percent. The least decision makers in a household were male children at 0.3 percent. Other females and non-household member females were not involved in decision making on sale of eggs.

Table 10.4: Main Decision making on Egg Sales, 2023

Province	Total number of households	Household Decision making on egg sales								
		Male spouse	Female spouse	Male child	Female Child	Other Male	Other Female	Both head and spouse	Non-member Male	Non-member Female

Chapter 11: Forage Production

This Chapter presents results on forage production by both households and establishments. The number of households and establishments that were engaged in forage production, total area planted, types and utilization of forage is reported under this chapter.

11.1 Number of Households and Establishments Involved in Forage Production

Table 11.1 shows that a total of 56,899 out of 1,875,298 livestock raising households and 212 out of 2,147 establishments were involved in forage production during the reference period. Among provinces, Central reported the highest percentage of forage producing households at 32.7 percent followed by North-western at 18.6 percent. The highest percentage of forage producing establishments was recorded in Central Province (31.6%) followed by Southern and Copperbelt provinces at 26.9 percent and 15.2 percent, respectively.

Table 11.1: Number and Percentage of Households and Establishments Involved in Forage Production by Province, 2023

Province	Households			Establishments		
	Involved in Livestock Raising	Involved in Forage Production		Involved in Livestock Raising	Involved in Forage Production	
	Number	Number	Percent	Number	Number	Percent
Central	222,989	18,627	32.7	667	67	31.6
Copperbelt	160,045	7,760	13.6	315	32	15.2

Southern	327,568	5,538	9.7	539	57	26.9
Western	137,853	244	0.4	51	3	1.5
Zambia	1,875,298	56,899	100.0	2,147	212	100.0

11.2 Land size used for growing forage by households and establishments

Table 11.2 shows that a total of 176,872 hectares of land were cultivated by both households and establishments for forage production. Out of this total area, 170,115 hectares were under households and Central Province reported the largest cultivated land by households for forage production at 103,671 hectares.

The total area for establishments was 6,756 hectares, of which Southern Province reported the largest area cultivated under forage at 3,535 hectares.

Table 11.2: Land size used for growing forage by households and establishments by Province, 2023

Province	Households			Establishments			Total area (ha)
	Number of households	Total area size (Ha)	Average area Size	Number of Establishments	Total area size (Ha)	Average area Size	
Central	18,627	103,671	5.6	67	1,074	16	104,745
Copperbelt	7,760	15,592	2	32	671	21	16,264

Zambia	56,899	170,115	3	212	6,756	32	176,872

11.3 Type of forage grown by Households

Figure 11.1 shows the distribution of households by types of forage crop grown. The figure shows that households who produced more than one type of forage were the highest at 15.4 percent, followed by those producing Maize (12.3%), then Cowpeas and Velvet Beans at 11.4 percent each.

Figure 11.1: Percentage distribution of households by types of forage crop grown, 2023

Further, Table 11.3 shows that at provincial level, Copperbelt recorded the highest percentage of households that grew maize for forage at 33.5 percent followed by Luapula and Central at 14.7 percent and 14.6 percent respectively. Meanwhile, Eastern Province reported the highest percentage of households that produced cowpeas for forage at 46.1 percent while Muchinga (32.6%) reported highest households that produced velvet beans.

Table 11.3: Number of Households by Type of forage grown and Province, 2023

Province	Households Involved in Forage Pro- duction	Types of Forage grown by households										
		Sunn- hemp	Velvet Beans	Cowpeas	Bracharia	Napier	Rhodes Grass	Forage Sorghum	Pigeon Pea	Maize	Soya Beans	Sunflower
		Number	Per- cent	Percent	Percent	Percent	Percent	Percent	Percent	Percent	Percent	Percent

11.4 Forage utilization by Households

Figure 11.2 shows the distribution of forage producing households by type of utilisation. The majority of households (51.5%) reported that they produced forage for sell followed by feed formulation at 13.3 percent.

Figure 11.2: Percentage Distribution of Forage Producing Households by Utilization Type, 2023

Further, Table 11.4 shows that at provincial level, Central recorded the highest percentage of households that produced forage for sale at 80.1 percent, followed by Muchinga and North-western at 75.4 percent and 70.3 percent respectively. Southern Province reported the highest percentage of households that utilized forage to formulate feed at 55.2 percent followed by Copperbelt (38.2%) and Luapula (18.5%).

Table 11.4: Households by Forage utilization Type and Province, 2023

Province	Households Involved in Forage Production	Forage utilization

Chapter 12: Honey Production and Sales

This chapter highlights results on honey production and sales in Zambia by households and establishments.

12.1 Households Involved in Honey Production

Table 12.1 shows the number of households and establishments involved in honey production during the reference period. At national level, a total of 44,003 households and 55 establishments were involved in honey production. Among the provinces, Copperbelt recorded the highest percentage of households at 25 percent involved in honey production while Luapula Province recorded the least percentage at less than 0.8. Among establishments, Central recorded the highest percentage at 42.1 percent of establishments involved in honey production, followed by Southern province at 23.6 percent.

Table 12.1: Number and Percentage of Households and Establishments Involved in Honey Production by Province, 2023

Province	Households Involved in Honey Production		Establishments Involved in Honey Production	
	Number of Households	Percent	Number of Establishments	Percent
Central	4,282	9.7	23	42.1
Copperbelt	11,033	25.1	10	18.7
Eastern	5,205	11.8	1	2.0
Luapula	362	0.8	1	1.8
Lusaka	2,022	4.6	0	0.0
Muchinga	2,791	6.3	4	6.4
Northern	1,002	2.3	0	0.0
North Western	7,559	17.2	3	5.4
Southern	8,735	19.9	13	23.6
Western	1,012	2.3	0	0.0
Zambia	44,003	100	55	100.0

12.2 Comb Honey Produced by Households and Establishments

Table 12.2 shows the quantity of comb honey produced by households and establishments. At national level, a total of 15,061.7 metric tonnes of comb honey was produced by both households and establishments. Out of this total, households contributed 14,718.4 metric tonnes while establishments contributed 343.3 metric tonnes.

Among provinces, North-western recorded the highest percentage of comb honey produced with 5,836.8 metric tonnes, followed by Central and the Copperbelt at 2,963.0 metric tonnes and 2,334.5 metric tonnes, respectively. Northern Province was the lowest at 104.2 metric tonnes.

Table 12.2: Quantity of Comb Honey Produced by Households and Establishments by Province, 2023

Province	Total Comb Honey Produced		Comb Honey Production by Households		Comb Honey Production (MT) by Establishments	
	Quantity (MT)	Percent	Quantity (MT)	Percent	Quantity (MT)	Percent
Central	2,967.9	19.7	2,963.0	20.1	4.9	1.4
Copperbelt	2,629.3	17.5	2,334.5	15.9	294.8	85.9
Eastern	1,017.0	6.8	1,016.9	6.9	0.1	0.0

Zambia	15,061.7	100.0	14,718.4	100.0	343.3	100.0

12.3 Comb Honey Sold by Households and Establishments

Table 12.3 shows the quantity of comb honey sold by households and establishments. At national level, a total of 7,513.2 metric tonnes of comb honey was sold by both households and establishments. Out of this total, 7,500. metric tonnes were sold by households while the remaining 13.3 metric tonnes by establishments.

Among provinces, North-Western recorded the highest percentage of comb honey sold at 43.2 percent, followed by Copperbelt at 17.7 percent. Lusaka province was the lowest at 0.1 percent.

Table 12.3: Quantity of Comb Honey Sold by Households and Establishments by Province, 2023

Province	Total Comb Honey Sold		Comb Honey Sold by Households		Comb Honey Sold by Establishments	
	Quantity (MT)	Percent	Quantity (MT)	Percent	Quantity (MT)	Percent
Central	908.3	12.1	907.9	12.1	0.4	3.0
Copperbelt	1,328.6	17.7	1,316.3	17.6	12.3	92.8
Eastern	620.9	8.3	620.9	8.3	0.0	0.0

Lusaka	3.9	0.1	3.9	0.1	0.0	0.0
Muchinga	357.5	4.8	357.5	4.8	0.0	0.1
Northern	13.6	0.2	13.6	0.2	0.0	0.0
North Western	3,247.9	43.2	3,247.8	43.3	0.1	0.9
Southern	146.2	1.9	145.8	1.9	0.4	3.2
Western	763.0	10.2	763.0	10.2	0.0	0.0
Zambia	7,513.2	100.0	7,500.0	100.0	13.3	100.0

12.4 Major Buyers of Comb Honey

Table 12.4 shows the number and percentage of households that sold comb honey by type of buyer. At national level, 38.0 percent of households sold comb honey to private traders, followed by other households and honey processors at 33.2 percent and 28.8 percent, respectively.

Table 12.4: Number and Percentage of Households that sold Comb honey by Type of Buyer and Province, 2023

Province	Total number of households sold Comb honey	Honey processors		Private traders		Other households	
		Number	Percent	Number	Percent	Number	Percent
Central	1,907	582	30.5	436	22.9	889	46.6
Copperbelt	6,825	4,215	61.8	1,548	22.7	1,062	15.6
Eastern	3,379	51	1.5	903	26.7	2,426	71.8
Luapula	362	0	0.0	362	100.0	0	0.0
Lusaka	210	17	8.3	12	5.8	180	85.9
Muchinga	2,125	0	0.0	1,752	82.5	372	17.5
Northern	667	0	0.0	118	17.7	549	82.3
North Western	6,591	2,813	42.7	3,589	54.4	189	2.9
Southern	3,581	0	0.0	1,304	36.4	2,276	63.6
Western	1,012	0	0.0	111	11.0	901	89.0
Zambia	26,656	7,679	28.8	10,134	38.0	8,844	33.2

Table 12.5 shows the number of establishments that sold comb honey by type of buyer. At national level, honey processors accounted for the highest number of buyers of comb honey sold by establishments at 11 while buyers within province accounted for the lowest number of buyers of comb honey at 10.

Table 12.5: Number of Establishments that sold Comb honey by Type of Buyer and Province, 2023

Province	Honey processors	Buyers within Province
	Number	Number
Central	0	7
Copperbelt	6	1
Eastern	0	0
Luapula	0	1
Lusaka	0	0
Muchinga	0	1
Northern	0	0
North Western	1	0
Southern	4	0
Western	0	0
Zambia	11	10

12.5 Major Constraints in Honey Production Experienced by Households

Figure 12.1 shows the major constraints that households experienced in honey production during the reference period. Most severe constraints were pests at 26.3 percent, followed by low colonisation at 19.7 percent.

Figure 12.1 Most Severe Major - Constraint Households Experienced in Honey Production, 2023

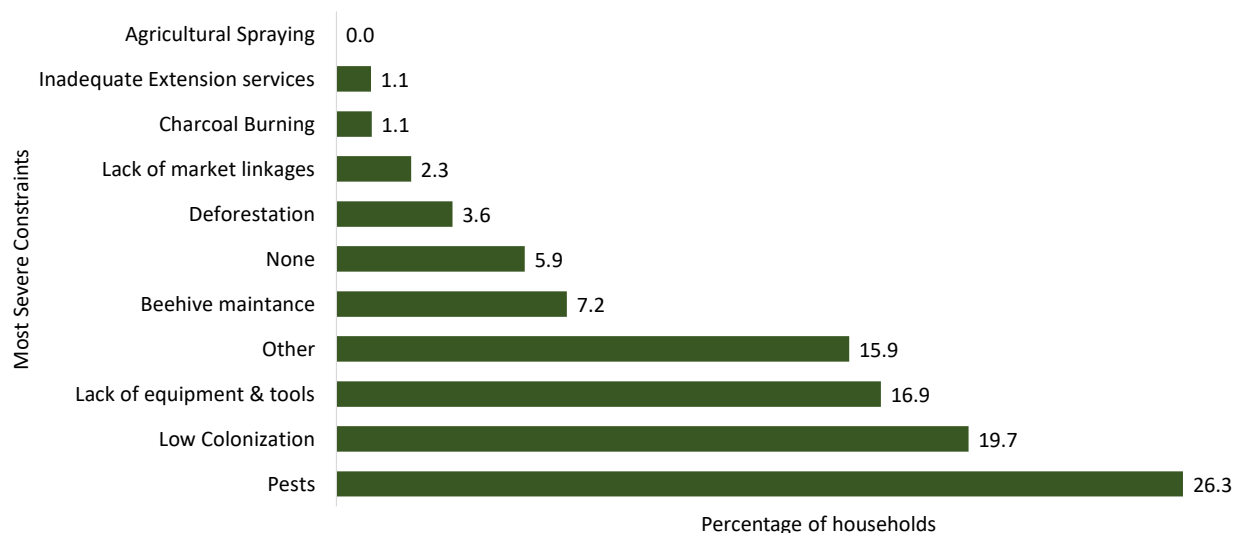

Figure 12.2 shows the second major constraint that households experienced. The second severe constraint was beehive maintenance at 24.1 percent, followed by pests at 17.4 percent. Agricultural spraying was the lowest at 0.5 percent.

Figure 12.2 Second Major - Constraint Households Experienced in Honey Production, 2023

Figure 12.3 shows the least major constraint that households experienced. The least severe constraint was beehive maintenance at 19.6 percent, followed by pests at 18.8 percent. Agricultural spraying was the lowest at 1.0 percent.

Figure 12.3 Least Major - Constraint Households Experienced in Honey Production, 2023

12.6 Major Constraints in Honey Production Experienced by Establishments

Figure 12.4 shows the most severe constraint establishments experienced in honey production. Most severe constraints were pests at 24.5 percent, followed by inadequate management skills at 23.5 percent.

Figure 12.4 Most Severe Major - Constraint Establishments Experienced in Honey Production, 2023

Figure 12.5 shows the second major constraint households experienced. The second major constraint was pests at 30.9 percent, followed by agricultural spraying at 15.9 percent.

Figure 12.5 Second Major - Constraint Establishments Experienced in Honey Production, 2023

Figure 12.6 shows the least severe constraint that households experienced. The least severe major constraint was lack of equipment and tools at 26.8 percent, followed by pests at 17.5 percent.

Figure 12.6 Least Major - Constraint Establishments Experienced in Honey Production, 2023

List of key persons involved in the Data Processing, Analysis and Report Writing

Main Author and Survey Coordinators

Mweemba Chijoka - Principal Statistician, MFL
Masiliso Sooka - Principal Statistician, ZamStats
Dr. Mataa Liywalii - Principal Veterinary Research Officer, MFL

Other Authors

Dr. Idowu Kolawole Odubote - Lecturer, Animal Science Dept, University of Zambia
Henry Sichone - Principal Livestock Production Officer, MFL
Brenda Nakamba - Senior Statistician, ZamStats
Dr. Clive Simwanza - Registrar-Animal Identification & Traceability, MFL
Ian Habulembe - Chief Economist, MFL
Chanda Dickson Bwalya - Statistician, ZamStats
Ellison Musimuko - Principal Livestock Production Officer, MFL
Daniel Chipaila - Senior Statistician, MFL
Ketrix Silika - Intern Statistician, MFL

Data Analysts

Masiliso Sooka - Principal Statistician, ZamStats
Daniel Chipaila - Senior Statistician, MFL
Dr. Mary Lubungu - Research Fellow, IAPRI
