# Population and Demographic Projections

# 2023 - 2047

## National Report

# Foreword

In accordance with the Statistics Act No. 13 of 2018 under section 7(2)(h) the Zambia Statistics Agency (ZamStats) is mandated to conduct a Census of Population and Housing (CPH) every 10 years. One significant output of the CPH is the production of the population projections. This report forms part of the series of outputs from the 2022 Census of Population and Housing. With technical input and support from the United States (US) Census Bureau, ZamStats produced national, provincial and district level population and demographic projections covering the period 2023-2047. Furthermore, Constituency level projections were produced for the period 2023-2033.

I would like to acknowledge the support of the Government of the Republic of Zambia (GRZ), the cooperating partners in particular, The University of Zambia- Department of Demography, Population Sciences, Monitoring and Evaluation and the United

Nations Population Fund (UNFPA) for supporting the production of this important output of the 2022 CPH. I would also like to acknowledge Dr. Maria Aysa Lastra and Dr. Fabian Romero from the US Census Bureau for their technical input.

The report provides insights into the country's future demographic landscape vital for informing policymakers, researchers, and the public about potential changes in population and demographic profile of the country. I hope these population and demographic estimates will be useful among the different stakeholders and users during this intercensal period and beyond.

Sheila S. Mudenda  
Statistician General

25<sup>th</sup> March, 2026

# Chapter 1: Zambia Country Profile

## 1.1 Introduction

Zambia, a land-linked country in Southern Africa, spans a total area of 752,612 square kilometers, situated between latitudes 8° and 18° south and longitudes 22° and 34° east. It shares borders with eight countries; The Democratic Republic of Congo to the north, Tanzania to the northeast, Malawi to the east, Mozambique, Zimbabwe, Botswana, and Namibia to the south, and Angola to the west.

## 1.2 Administration

Zambia is divided into ten provinces; Central, Copperbelt, Eastern, Luapula, Lusaka, Muchinga, Northern, North Western, Southern, and Western. As of the most recent administrative data, the country has 116 districts, 156 constituencies, and 1,858 wards. Lusaka is the capital city and the seat of the Government.

## 1.3 Census of Population and Housing Undertaking

Zambia conducted her first E-census in 2022. This was the sixth National Census of Population and Housing conducted in Zambia since independence in 1964. So far, the country has conducted censuses in 1969, 1980, 1990, 2000 and 2010. The 2022 Census of Population and Housing was carried out from 18<sup>th</sup> August to 21<sup>st</sup> September, 2022.

The Census was launched by His Excellency, the President of the Republic of Zambia Mr. Hakainde Hichilema on 17<sup>th</sup> August, 2022. The census enumeration started on the 18<sup>th</sup> of August 2022 with Census enumerators going out visiting all buildings in Zambia whether completed, incomplete, abandoned, habitable and inhabitable for the purpose of identifying characteristics of all buildings and households. All persons who lived in the buildings as well as those that lived in open spaces as households were counted. Persons who were present at any time at the household during the reference period (18<sup>th</sup> August to 7<sup>th</sup> September) were counted directly as Usual Household Members present at the Housing Unit/Dwelling. Those that visited the household

and stayed throughout the reference period were counted as Visitors of the Household. While those who were absent the entire enumeration period were enumerated by proxy, that is, as Usual Household Members Absent from the Housing Unit/Dwelling. Detailed personal information was only collected for Usual Household Members present and Visitors found at the Housing Unit/Dwelling during the reference period, while for Usual Household Members Absent, only Age, Sex, Relationship to Household Head and Residence Status were collected from the main respondent for the Household.

### 1.3.1 Improvements during the 2022 Census

The 2022 Census employed the use of digital and satellite imagery mapping and listing of all structures and households, and the use of Computer Assisted Person Interviewing (CAPI). All materials for trainings and field work were loaded on the tablets thus evading the cost of printing large volume of documents. Another very important improvement in the 2022 Census was the capturing of GPS coordinates for all households. This information is very important in relating to the location of households and their social and economic facilities. This information also improved the census coverage by identifying omissions and validating coverage.

The overall objective of the census mapping and listing exercise was to provide an updated digital geospatial database for enumeration areas that can be used as a basis for the census planning process during the pre-enumeration phase, census data collection and, for development of sampling frames for surveys and dissemination of census data/results during the Post-enumeration phase.

The specific objectives were:

- To delineate enumeration areas (EAs) in the country to facilitate the smooth counting of people during the enumeration period and essentially to establish that all

areas are covered and that everyone in the country is counted with minimal possibility of under or over counting;

- Re-delineate enumeration areas (EAs) into manageable sizes in terms of households' population to be enumerated during the census period;
- Provide the basis to estimate resources required at each administrative level such as personnel, materials and transport; and
- Ensure that EA maps easily guide the enumerators on the households that they should cover during the census period.

### 1.3.2 Legal Basis for the Census

A Census is the primary source of information about the population of a country. The Zambia Statistics Agency is mandated through the Statistics Act No.13 of 2018 of Laws of Zambia, under section 7(2)(h) to conduct the census of population and housing every ten years. Further in accordance with section 22 of the Act, Statutory Instrument (SI) No. 92 of 2021, the national census of population and housing was approved by the Minister of Finance and National Planning, Dr. Situmbeko Musokotwane.

### 1.3.3 Data Confidentiality

All the information collected during the 2022 Census of Population and Housing was treated as strictly confidential. Extensive confidentiality processes were made to ensure that anonymity of data providers was ascertained at all times. The data collected will not be shared with any third parties if it may lead to the direct or indirect identification of the respondents. All the non-civil service census staff took an oath of secrecy before being engaged in any data collection or data handling. Mechanisms were put in place to report any possible violations of census procedures and/ or violation of confidentiality.

### 1.3.4 Census Objectives

The main objectives of the 2022 Census were:

- To provide accurate and reliable information on the size, composition and distribution of the population of Zambia at all Ward, Constituency, District and Provincial levels;
- To provide information on the demographic and socio-economic characteristics of the population of Zambia;
- To provide an accurate sampling frame for future intercensal household and population-based surveys;
- To generate statistics on small areas and population groups; and
- To provide a benchmark for research and analysis, particularly for population projections.

### 1.3.5 Pre-enumeration Phase

The pre-enumeration phase can be categorized into five main parts; Formation of the Census administrative structures, Mapping and Listing, Questionnaire Adaptation, Pilot Census and Publicity campaigns.

### 1.3.6 Census questionnaires

The 2022 Census had two types of questionnaires; the Household questionnaire and the Institutional questionnaire. The household questionnaire was used to capture both individual and household characteristics, whereas, the Institutional questionnaire was used to capture populations residing in collective living quarters.

The content of the 2022 Census questionnaire generally remained the same as that of the previous censuses. However, there were a few changes made on certain topics and addition of new topics. Some changes included disability data collected using the six Washington Group questions which focuses on Activity Limitation, Nationality was changed to Citizenship, the question on Children born in the last 12 months was changed to Date of birth of the last child born alive. Among the added topics and questions were; Date of arrival in the country, Birth registration, Death registration and certification, Emigration of household members and Ownership of ICT materials.

### 1.3.7 Data Collection Phase

Enumerators were assigned an EA each. During enumeration, data collectors used electronic EA maps prepared by the Geographic Information System (GIS) Unit to identify households and conduct interviews. The maps contained geo-referenced households from the Mapping and Listing exercise conducted from 2019 to 2020. Households whose markers were not appearing on the maps were added and interviewed.

In vast EAs where enumerators had to move long distances, bicycles were used to move around these EAs to cover households. Supervisors on the other hand mostly used motor bikes to navigate the areas, collect data from enumerators' tablets and send data to the central server at the head office.

A census dashboard was set up for data quality control as enumeration was in progress. It assisted with assessing the coverage of areas as well as monitoring several questionnaire

content indicators such as population size, fertility rate, sex ratio, average household size, response rate, among others. Furthermore, spot checks and re-interviews were conducted by census supervisors to ensure quality data was collected.

The 2022 CPH used both the de facto and de jure method of enumeration. The midnight of 8th September 2022 was the reference date for the 2022 CPH or the census reference moment. The three-week period (18th August– 7th September) was taken as the census reference period. During this period, all persons residing in Zambia, other than diplomats, were enumerated regardless of their residence status. Those who were outside the country and were not expected to be back within 6 months were not enumerated.

### 1.3.8 Post Enumeration Phase

The GIS, using the satellite imagery validated the enumeration area coverage by the data collectors. Where households were missed, data collectors had to go back to ensure complete enumeration. Households falling outside the boundaries were realigned. Apart from GIS enumeration area coverage validation, the post enumeration phase also involved data cleaning and processing for the questionnaire content. During this process data was checked for errors, completeness, duplicates, consistency and also its validity.

# Chapter 2: Background

## 2.1 Base Population

The official date of Zambia's 2022 Census was September 8. A population and housing census can either have a de facto or a de jure count. A De facto count includes people based on the location where they were on the Census date while De jure count includes people based on their usual residence.

Since the 1980 Census, Zambia provides both the de jure count and the de facto count. Consistent with previous projections of the population in Zambia, the projections in this report are based on De jure counts. The projections cover a period of 25 years from 2023 to 2047.

## 2.2 Geographic Base for the projections

At the time of the census, Zambia had 10 provinces, 116 administrative districts and 156 constituencies. This report therefore provides projections at national, provincial and district level covering the period 2023-2047, as well as constituency level projections for the period 2023-2033.

## 2.3 Rational for making the projections

National planning requires estimates of both current and future population and demographic trends. Information on the future size and composition of the population, including different age compositions (such as Under-5 years children), those eligible to obtain a National Registration Card (16 years and older), those in the voting age (18 years and older), the youth (19- 34 years), the economically active population aged 15-64 years, the elderly aged 65 years and older, among others are needed for planning of various specialised services and programmes. "If no estimates based on systematic analysis of population trends are available, the planners can only proceed with more or less vague assumptions or notions concerning the magnitude of needs and resources" (Manual X 1956). Population projections provide a glimpse of the most basic characteristics of human societies in the future, in terms of the size and composition by age and sex. They also provide an important tool for planning and policy formulation. The projections provided in this report will form input into national and local planning during the current intercensal period and beyond. The projections will also inform future adjustments in population forecasts, once the next census is conducted or when new demographic data becomes available from intercensal surveys.

## 2.4 Similarities and differences of this report to previous reports

Following the 2010 Census, the Zambia Statistics Agency (formerly Central Statistical Office) issued a Population Projections Report. The report projected Zambia's population by age and sex, as well as provided other demographic indicators, up to the district level. The current report compares with the 2010 report in a number of ways;

- RUP Software was used for cohort component projections,
- The population tables (by age and sex) are accompanied by a set of demographic indicators such as infant mortality and life expectancy at birth,
- Cohort component models are developed to one geographic level (Province) below the national,
- At district, constituency and ward level projections are based on mathematical raking controlled to cohort component projections at province level.

In the Methodology Section, further details are provided on how the cohort component models were assembled and how the mathematical raking was implemented.

# Chapter 3: Methodology

There are two basic approaches to projecting populations, the cohort component approach and the use of mathematical models.

## 3.1 Cohort Component Method

This method begins with numerical information about the size and structure of a population in the past. That population (disaggregated by age and sex) is then subjected each year to key aspects of demographic change; births, deaths, and net migration, the three key elements of population change which allows one to track cohorts over time. Each year, the specified birth rates combine with information on mothers at childbearing ages to determine the number of births entering the population at age zero. These births are divided among males and females based on the specified sex ratio at birth. In each year, the population by age and sex is subjected to the corresponding death rates specified for that group. It is also subjected to whatever net migration estimates are specified for each sex and age group.

The strength of the cohort component approach is that it reflects the actual process of demographic change. Depressions and bulges in population structure at a particular age tend to be reflected by the same cohort in the future at later ages. Another advantage of the cohort component approach is that a variety of demographic indicators (such as infant mortality, life expectancy at birth, fertility rates, and percent above or below particular ages) are readily available from the output of such models.

Although the cohort component approach is often considered the gold standard for population projections, it may be less suitable at lower geographic levels for which data on demographic change may be unreliable or unavailable. Moreover, the computational details and data processing requirements of cohort component models multiply in accordance with the number of subnational units being considered. Given these limitations and challenges, the cohort component approach is often recommended at the national level and for one geographic level below the national

(e.g., the province level, or rural and urban), but not for lower geographic levels.

## 3.2 Mathematical Models

For two or more geographic levels below the national (e.g. district), a second approach for population projections is often preferred. The approach uses mathematical models and raking to ensure that the projected sums of populations at lower geographic units will match that of the larger geographic units to which they belong. The age and sex distributions of lower geographic units can also be effectively raked to the age and sex distribution of broader units. When the latter are drawn from cohort component models, the raked subunits will incorporate to some extent the cohort component dynamics of the larger geographic units to which they belong. However, projected characteristics of the subunits in each year may reproduce features of those units in the base year (e.g. their initial age and sex structure).

## 3.3 Application of the cohort component method in the 2023-2047 projections

Cohort component models were developed for rural and urban areas of Zambia, as well as for each of the ten provinces. For the districts within each province, projections were generated using mathematical models controlled to the cohort component projections of the provinces.

The De jure count of the 2022 Census provided the "base population" (disaggregated by age and sex) from which the projections commenced. Two modifications were made to the census counts to come up with the base population. Firstly, the population below 10 years was adjusted upwards based on the prevailing fertility and mortality levels. The upward adjustment implied that 20.1 percent of males and 18.3 percent of females were underreported at ages 0-4 years, and that 8.5 percent of males and 5.6 percent of females were underreported at ages 5-9 years. Secondly, the population by age and sex as of the

census date (8th September) was moved in retrospect to mid-year (July 1, 2022). The adjustment of the base population to mid-year ensured that all the projected populations referred to mid-year estimates, as is standard in most population projections.

## 3.4 Mortality Assumptions

Mortality rates were calculated by dividing the deaths reported in the 2022 Census by age and sex by the corresponding population for that age and sex. It was assumed that mortality would continue to decline based on the observed census past trends. The MORTPAK application QFIVE was used to produce the childhood mortality rates which were applied as inputs to generate life tables using the US Census Bureau PASEX spreadsheet LTPOPDTH. The age pattern of mortality was assumed by 2150 to match that of the Coale-Demeny North model life table (Coale AJ et al, 1983). The effect of COVID-19 was not taken into account.

## 3.5 Fertility Assumptions

The age pattern of fertility was drawn from the 2022 Census (births to women at childbearing ages divided by women at that age group). That entire age pattern was adjusted upwards based on the Brass P/F ratio method (13). The resulting total fertility rate (TFR) of 4.6 births per woman's reproductive lifetime implied a 22 percent undercount of births reported for the year prior to the census. The TFR was then projected based on adjusted fertility estimates from the 1990, 2000, 2010, and 2022 censuses, with a logistic trend fit to those estimates. That model suggested a decline in the TFR to 3.3 by 2047. The sex ratio at birth was drawn from the 2022 Census (103 male births per 100 female births).

### 3.6 Migration Assumptions

Due to lack of adequate data on international migration, indirect estimation (residual) method was used to estimate net migration. The US Census bureau PASEX spreadsheet LTCSRmig was used. The population in 2010 and 2022 were used in estimating the number of migrants. The residual method works in 5-year intervals using two censuses undertaken 10 years apart, thus the 2022 population was survived (moved) back to 2020. The 2010 population and the 2022 population that was moved to 2020 was then survived to 2015. The residual population arising from the two survived populations in 2015 was the estimated net migration. The net migration was applied as inputs to project migration to 2100. Net migration was projected to be zero by 2063.

### 3.7 Application of mathematical models in the 2023-2047 projections

Sub-national population projections, particularly at the district level, encounter challenges when applying the traditional cohort-component method. The challenges are as a result of data limitations and the complexity of integrating multiple models. To address these limitations, mathematical modelling techniques were used. Specifically, a raking procedure was incorporated to ensure consistency and reliability in the projected population estimates.

### 3.7.1 Sub-national projections-District level projections

The 2022 Census age-sex distributions for each district were adjusted through a raking procedure. The raking process ensured that the projected district age-sex distributions reflected the provincial age-sex distributions derived from the cohort-component model. This step was important as it ensured that the age structure within each district reflected the overall age structure of the province, as projected by the more robust cohort-component model.

### 3.8 Alternate National Projections-High and Low Variant

Alternate high and low population projections were developed based on alternate assumptions of fertility change to factor in any uncertainty in future fertility levels in Zambia. The high variant model assumed that the TFR would decline to 3.0 children per woman by 2100. The low variant model assumed that the TFR would decline to 2.0 children per woman by 2100. The pace of change in each case assumed linear decline. Other components of population change (mortality and migration) were held constant as projected in the medium variant projection.

### 3.9 Limitations

The accuracy of demographic and population forecasts are verified by future data that confirm how well the original assumptions held. In future predictions, some level of uncertainty is unavoidable, therefore, high and low variant projections of Zambia's national population have been provided.

When cohort component models are developed for sub-national units separately, their sum typically may not match that produced for the higher level (national) using the same cohort component method. This would have been the case with the current projections. However, to ensure consistency, results of each sub-national cohort component models were adjusted so that their summed populations and demographic events matched that of the national cohort component model (US Census Bureau, 2013).

# Chapter 4: Summary of Population and Demographic Projections, 2023-2047

## Key Findings

### Population

- The country's total population is expected to grow from about 21.0 million in 2023 to 25.9 million in 2030 and to 39.9 million by 2047.
- The population in rural areas is expected to grow from 11.4 million in 2023 to about 14.0 million in 2030 and to 20.1 million by 2047.
- The population in urban areas is expected to grow from 9.5 million in 2023 to 11.9 million in 2030 and to 19.7 million by 2047.

### Population growth rate

- The population in rural areas is expected to grow at a declining rate from 2.8 percent in 2023 to 1.7 percent by 2047 while urban population is expected to grow at a declining rate from 3.4 percent to 2.6 percent during the same period.
- During the period 2023-2032, Central Province (3.6 percent) and North Western Province (3.2 percent) are projected to be the fastest growing provinces, while the least annual rate of population growth during the period is expected to occur in Muchinga Province (2.1 percent).

### Fertility

- The TFR is expected to decline by 1.3 children per woman over the next 25 years, from 4.6 in 2023 to 3.3 in 2047.
- Lusaka (2.9) and Copperbelt (3.1) provinces are projected to have TFR levels lower than the national average of 3.3

- Four provinces (Luapula, North Western, Southern and Western) are expected to have TFRs of 3.5 children per woman or more.

### Infant Mortality

- The infant mortality rate (IMR) is projected to decline gradually from 30.6 infant deaths per thousand live births in 2023 to 20.9 by 2047.
- In rural areas, the IMR is projected to decline from 34.2 to 22.7, while in urban areas the IMR is projected to decline from 24.9 to 17.5 during the projection period.

### Life Expectancy

- Life expectancy at birth is projected to rise by 6.3 years during the projection period from 66.9 years in 2023 to 73.2 years by 2047.
- Life expectancy at birth is expected to increase from 64.2 years to 70.8 for males and from 69.6 to 75.8 for females between 2023 and 2047.

### Urbanization

- The percent of the total population living in urban areas will increase gradually in the next 25 years, rising from 45.4 percent in 2023 to 49.5 percent by 2047.

The detailed tables in this report show projections of Zambia's population by age and sex for various years organized within various geographic levels. To facilitate comparisons across time and geographic areas, the following summary tables and figures highlight certain indicators drawn from the more detailed tables.

## 4.1 Population forecast

Figure 1 shows the growth of Zambia's total population during the projection years 2023-2047. The country's total population is expected to grow from about 21.0 million in 2023 to 25.9 million in 2030 and to 39.9 million by 2047. This means that the population will be nearly two folds during the 25-year projection period.

**Figure 1: Total Population for selected projection years (Medium Variant), Zambia 2023-2047**

The population in rural areas is expected to grow from 11.4 million in 2023 to 13.8 million in 2030 and to 20.1 million by 2047 (Table A1), while the population in urban areas is expected to grow from 9.5 million in 2023 to 11.9 million in 2030 and to 19.7 million by 2047.

**Table 1: Projected Mid-year Population by Province, Sex and year of projection (Medium Variant), Zambia, 2023-2047**

Province	Sex	Year of Projection					
		2023	2030	2035	2040	2045	2047
Zambia	Total	20,986,170	25,902,763	29,782,660	33,867,395	38,117,936	39,859,562
	Male	10,351,499	12,822,132	14,763,748	16,801,008	18,914,372	19,778,602
	Female	10,634,671	13,080,631	15,018,912	17,066,387	19,203,564	20,080,960
Central	Total	2,423,651	3,198,834	3,847,034	4,568,821	5,368,724	5,712,513
	Male	1,208,381	1,602,212	1,930,744	2,296,000	2,700,459	2,874,257
	Female	1,215,270	1,596,623	1,916,290	2,272,821	2,668,265	2,838,256

Table 2 shows the Projected Mid-year Population by Variant and Year of Projection from 2023 to 2047. The population of Zambia is projected to continue growing steadily from 2023 through 2047 under all three projection scenarios (low, medium, and high variants). In 2023, the total population is estimated at approximately 21 million people, with marginal differences

across the three variants. By 2047, the population is expected to rise to nearly 40 million people by 2047 under the medium projection, while under the low and high variants the population is projected to increase to 38.8 million and 41.2 million, respectively.

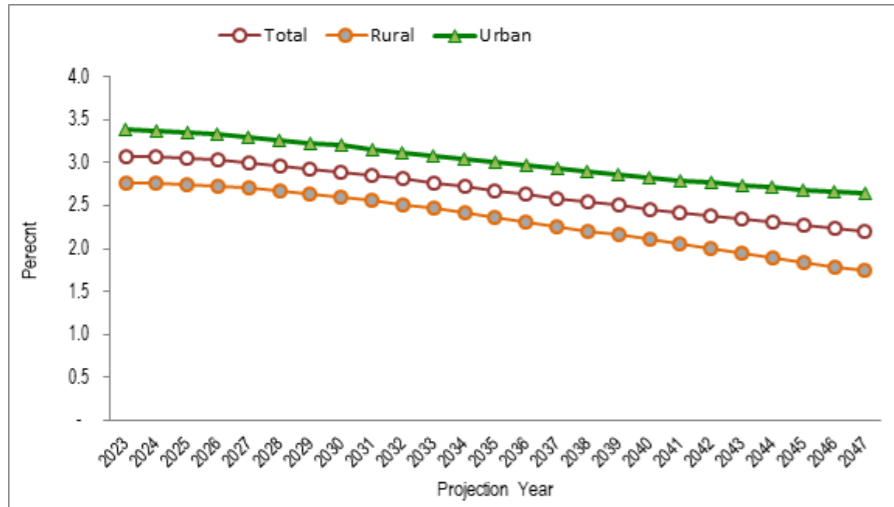

**Table 2: Projected Mid-year Population by Variant and Year of Projection, Zambia, 2023-2047**

	Low Variant	Medium Variant	High Variant
2023	20,991,197	20,986,170	21,007,375
2024	21,628,173	21,641,442	21,685,001
2025	22,284,112	22,314,128	22,381,720
2026	22,953,528	23,003,214	23,096,692
2027	23,635,549	23,707,598	23,828,890

2041	34,047,977	34,705,220	35,490,638
2042	34,828,393	35,549,280	36,409,643
2043	35,611,220	36,399,454	37,339,935
2044	36,396,226	37,255,796	38,282,255
2045	37,183,224	38,117,936	39,236,592
2046	37,971,947	38,985,856	40,202,848
2047	38,762,080	39,859,562	41,181,098

## 4.2 Population growth rate

Figure 2 shows the percent annual rate of population growth forecasted for the projection period, 2023-2047 by rural and urban residence. The population is expected to continue growing at an average annual rate of growth of around 2.7 percent during the projection period, 2023-2047. The population in rural areas is expected to grow at an average of 2.3 percent per annum, while the urban population is expected to grow at an average rate of about 3.0 percent per annum during the same period.

**Figure 2: Annual Rate of Population Growth by Rural/Urban Residence (Medium Variant), Zambia 2023-2047**

During the period 2023-2032, Zambia’s population is projected to grow at an average of 2.7% per annum (Table 3). At provincial level, Central Province (3.6 percent) and North Western Province (3.2 percent) are projected to be the fastest growing provinces, while the least annual rate of population growth during the period is expected to occur in Muchinga Province (2.1 percent).

**Table 3: Annual rate of population growth (Geometric) by Province and rural/urban residence (Medium Variant), Zambia 2023-2032**

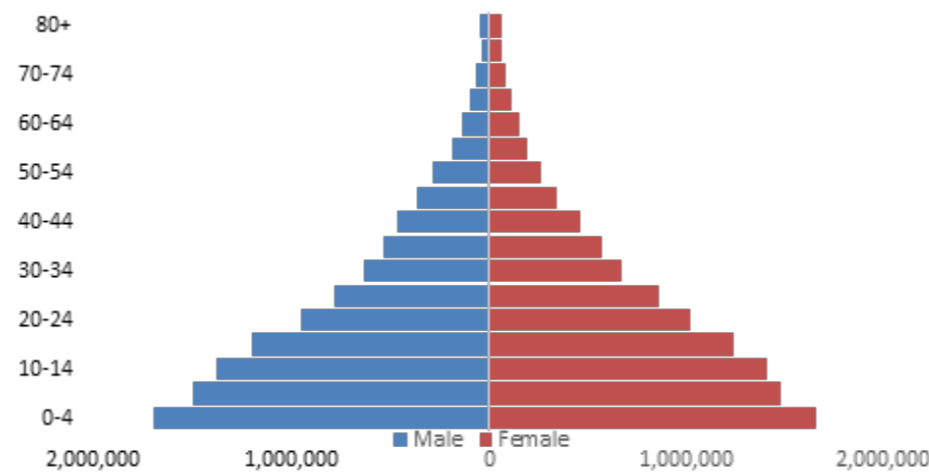

Province/Rural/Urban	2023	2032	Annual Population Growth Rate, 2023-2030 (Geometric)
Zambia	20,986,170	27,425,414	2.7
Rural	11,448,866	14,593,977	2.5
Urban	9,537,304	12,831,437	3.0
Central	2,423,651	3,449,203	3.6
Copperbelt	2,983,173	3,853,934	2.6
Eastern	2,598,641	3,266,315	2.3
Luapula	1,618,267	2,125,397	2.8
Lusaka	3,352,579	4,213,871	2.3
Muchinga	963,288	1,183,741	2.1
Northern	1,704,211	2,201,903	2.6
North Western	1,362,344	1,864,498	3.2
Southern	2,536,590	3,393,395	3.0
Western	1,443,426	1,873,157	2.6

Zambia’s young population provides in-built potential for continued population growth into the future, despite evidence of falling fertility during the projection period. The population in Zambia is expected to register positive natural rate of growth (the difference between annual births and deaths) during the entire projection period. The annual number of births is projected to increase from 757,562 in 2023 to 868,176 by 2030 and to 1,041,308 by 2047. The annual number of deaths is also projected to increase on account of increased absolute population numbers and not owing to increased mortality levels (The mortality is expected to continue to decline during the projection period). The annual number of deaths is therefore projected to increase from 137,171 in 2023 to 139,147 by 2030 and to 175,193 by 2047.

### 4.3 Population Structure

The population age and sex structure is depicted in Figures 3-5 for selected projection years. Owing to Zambia’s continued population growth during the projection years, the age structure is expected to remain relatively unchanged. The population age structure depicted using the population pyramids are a representation of the combined effect of the prevailing fertility and mortality levels and patterns during the projection period. The broad base shows the effect of continued high fertility, while the narrowing in older ages shows the continued effect of high adult mortality.

**Figure 3: Population Age and Sex Structure (Medium Variant), Zambia 2023**

**Figure 4: Population Age and Sex Structure (Medium Variant), Zambia 2032**

**Figure 5: Population Age and Sex Structure (Medium Variant), Zambia 2047**

In Figure 6, the proportion aged 0-4 declines over time due to the projected decline in fertility. The projected decline in mortality, given Zambia’s young population (large proportion below the age of 15) is expected to result in growth in the age groups 15-64 (the economically active age group). Falling mortality is expected to lead to increased life expectancy at birth (and at different ages) and the proportion of the elderly, those aged 65 years and older, in the long run.

**Figure 6: Percentage of Projected Population by Age Group and Selected Years of Projection (Medium Variant), Zambia**

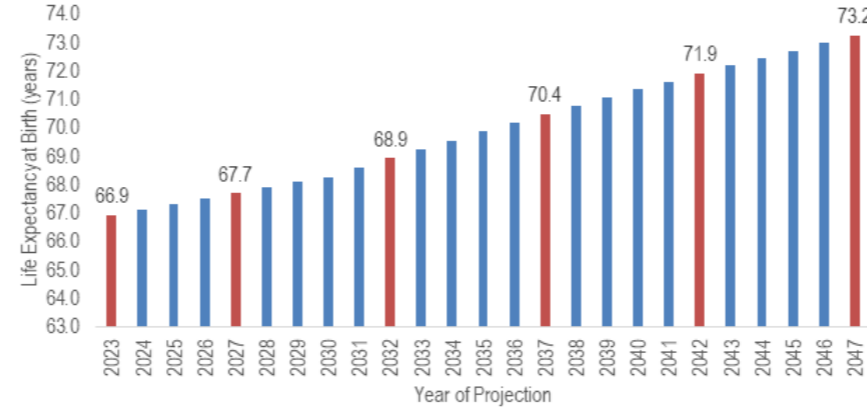

#### 4.4 Life expectancy

Figure 7 presents projected life expectancy at birth for the projection period. The overall life expectancy is expected to increase by 6.3 years from 66.9 years in 2023 to 73.2 years in 2047. A gradual increase in life expectancy at birth is expected during the projection period for both males and females. Life expectancy at birth is expected to increase from 64.2 years to 70.8 for males and from 69.6 to 75.8 for females between 2023 and 2047. This is an increase of 6.6 years for males and 6.3 years for females. Females are expected to maintain their positive survival advantage over males during the period of projection. This will result in an increase in the gap in life expectancy at birth between males and females of 5.0 years by 2047, from a gap of 5.4 years in 2023.

The impact of health interventions aimed at reducing morbidity and disease burden from major killers of children and adults such as Malaria, HIV/AIDS, diarrhoea, and malnutrition among others, are expected to contribute towards improved survival prospects for both males and females.

**Figure 7: Projected Life Expectancy at Birth by Year of Projection (Medium Variant), Zambia 2023-2047**

**Figure 8: Projected life expectancy at birth by sex and year of projection (Medium Variant), Zambia 2023-2047**

Table 4 presents projected life expectancy at birth by province and sex for selected years. By 2047, life expectancy at birth is projected to be highest in Lusaka (74.8) and Northern province (74.8 years) and lowest in Luapula province (68.1 years).

Among the males and females the most gain in life expectancy at birth was in Luapula Province with 9.5 years and 8.9 years, respectively. Muchinga Province had the least gain in life expectancy at birth for males with 4.2 and females with 4.5.

Among females in Luapula, Northern, Southern and Western provinces are projected to gain 7 years or more in life expectancy at birth during the projection period. The least gain among women is projected to occur in Muchinga Province with 4.5 years and 6.8 years. Although Lusaka and Southern provinces

are projected to make marginal gains in life expectancy at birth during the projection period, both provinces had relatively higher life expectancy at birth at baseline in 2022.

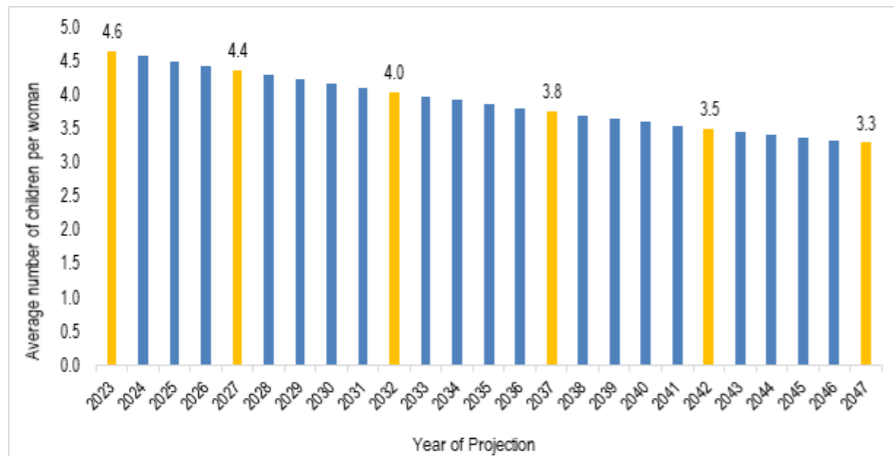

**Table 4: Projected life expectancy at Birth by Province, Sex and year of Projection (Medium Variant), Zambia, 2023-2047**

Province	Sex	Year of Projection					
		2023	2030	2035	2040	2045	2047

	Female	67.2	67.8	69.0	70.9	72.6	74.2

### 4.5 Fertility

Figure 9 presents projected total fertility rates (TFR) for the projected period. The TFR is expected to drop by 1.3 children per woman over the next 25 years, from 4.6 in 2023 to 3.3 in 2047. Despite the projected fertility decline, the population size will continue to grow due to the young age structure of the population. The projected TFR of 3.3 in 2047 still remains well above the replacement fertility of 2.1 children per woman. Measures to further reduce overall fertility are needed in order to slow down the rapid growth in the population and ultimately reduce negative effects of a young population such as a high child dependency ratio.

**Figure 9: Projected Total Fertility Rates (TFR) by Year of Projection (Medium Variant), Zambia 2023-2047**

Between 1980 and 2022, the TFR for Zambia declined by 2.6 children per woman from a TFR of 7.2 in 1980 (CSO,2003) to a TFR of 4.6 in 2022.

Table 5 presents TFRs by province for selected projection years. Lusaka (2.9) and Copperbelt (3.1) provinces are projected to have TFR levels lower than the national average of 3.3. Fertility will decline gradually in Lusaka and Copperbelt during the projection period despite the two provinces being the most urbanized. The TFR will drop by 0.9 children per woman in Copperbelt Province and 0.8 children per woman in Lusaka Province between 2023 and 2047.

By 2047, four provinces (Luapula, North Western, Southern and Western) are expected to have TFRs of 3.5 children per woman or more. However, despite these four provinces maintaining relatively high fertility into the future, they are projected to experience the largest drop in TFR during the projection period. The TFR will drop by 1.9 children for Luapula Province, 1.8 children per woman for North Western Province, and 1.7 children per woman for Southern and Western provinces between 2023 and 2047.

**Table 5: Projected Total Fertility Rates (TFR) by Province and Year of Projection (Medium Variant), Zambia, 2023-2047**

Province	Year of Projection					
	2023	2027	2032	2037	2042	2047
Zambia	4.6	4.4	4.0	3.8	3.5	3.3
Copperbelt	4.0	3.8	3.6	3.4	3.2	3.1
Eastern	4.7	4.4	4.1	3.8	3.5	3.3
Luapula	5.5	5.1	4.6	4.2	3.9	3.6
Lusaka	3.7	3.5	3.3	3.2	3.0	2.9
Muchinga	4.7	4.4	4.1	3.8	3.5	3.3
Northern	5.0	4.7	4.3	3.9	3.6	3.4
North Western	5.3	5.0	4.5	4.1	3.8	3.5
Southern	5.2	4.8	4.4	4.0	3.7	3.5
Western	5.2	4.9	4.4	4.1	3.8	3.5

### 4.6 Infant Mortality

Figure 9a presents projected infant mortality rates (IMR) by year of projection and rural/urban. Overall, The IMR is projected to decline by more than half during the period 2023-2047, dropping from 30.6 deaths per thousand to 20.9 deaths per thousand. In rural areas, the IMR is projected to decline from 34.2 to 22.7, while in urban areas the IMR is projected to decline from 24.9 to 17.5 during the projection period.

**Figure 9a: Projected Infant Mortality Rates (IMR) by Rural/Urban and Year of Projection (Medium Variant), Zambia 2023-2047**

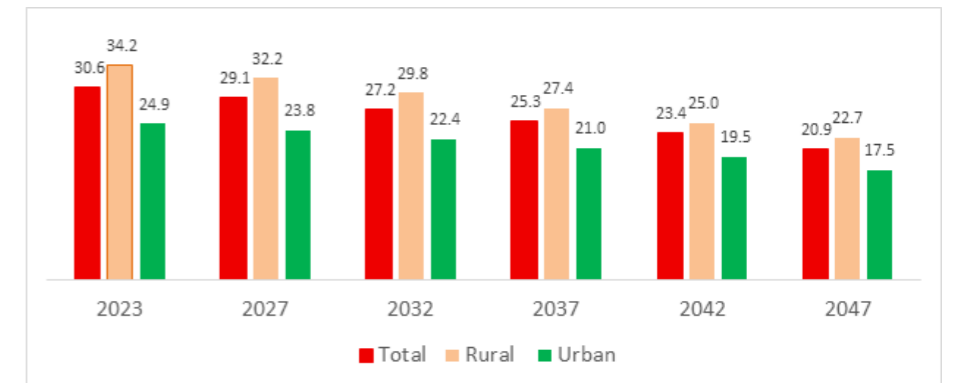

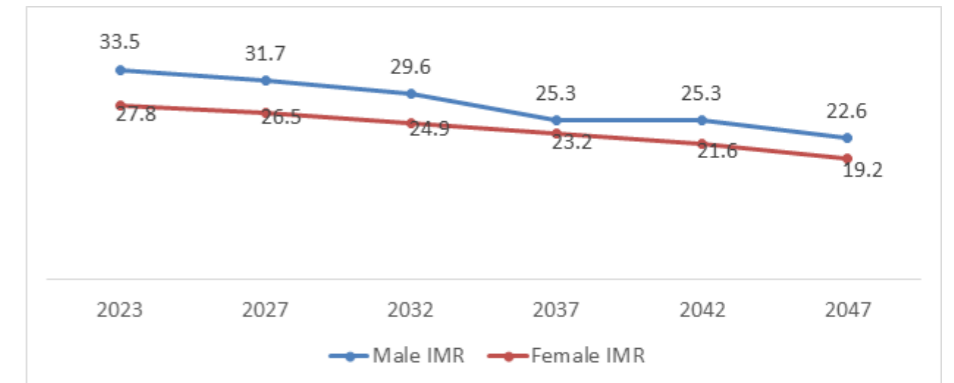

Figure 9b shows IMR by sex and year of projection. The IMR declined from 33.5 deaths per thousand to 22.6 deaths per thousand for males and 27.8 deaths per thousand to 19.2 deaths per thousand for females.

**Figure 9b: Projected Infant Mortality rates (IMR) by Sex and Year of Projection (Medium Variant), Zambia 2023-2047**

At province level, the largest decline in IMR is projected to occur in Luapula Province from 50.2 deaths per thousand in 2023 to 32.5 deaths per thousand by 2047. Lusaka Province is projected to experience the lowest decline in IMR, from 21.6 deaths per thousand in 2023 to 16.4 deaths per thousand by 2047 (Table 6).

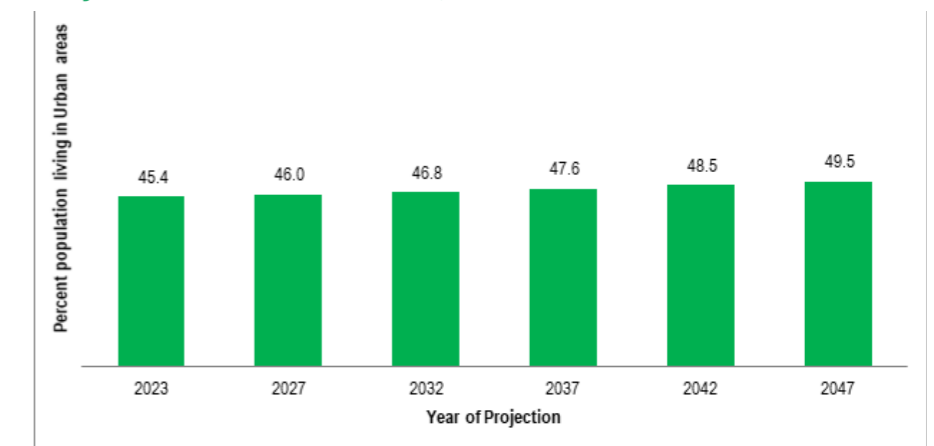

**Table 6: Projected Infant Mortality Rates (IMR) by Province and Year of Projection (Medium Variant), Zambia 2023-2047**

Province	Sex	Year of Projection					
		2023	2030	2035	2040	2045	2047
Central	Total	28.3	26.9	25.2	23.4	21.7	19.4

## 4.7 Urbanisation

The percent of the total population living in urban areas will increase gradually in the next 25 years, rising from 45.4 percent in 2023 to 49.5 percent by 2047. Although the pace of urbanization may seem slow, fertility is much higher in rural areas than urban areas. Therefore, even though rural areas may lose substantial populations to urban areas, they may grow quickly due to relatively higher birth rates. The actual future pace of urbanization depends in part on differences in mortality and future migration trends, which are very difficult to predict, as well as the extent to which rural areas become reclassified as urban.

**Figure 10: Projected Percent Urban Population by Year of Projection (Medium Variant), Zambia 2023-2047**

**Table A1: Total Population by Sex, Age (5 Year Age Groups) and Year of Projection (Single Years) 2023-2047, Zambia, (Medium Variant Projection)**

## EDITORS

Sheila S. Mudenda	Acting Statistician General
Frank Kakungu	Census Manager
Chola Nakazwe	Deputy Census Manager
Palver Sikanyiti	Assistant Census Manager

## ANALYSTS

Palver Sikanyiti	Senior Demographer
Chibesa Musamba	Senior Statistician
Harriet Zimbizi	Senior Demographer
Sikufele Mubita	Senior Statistician
Francis K. Mwinsa	Statistician
Morris Mubita	Statistician
Bubala Moonga	Statistician
Cephas Sitali	Statistician
Lucy Nyangu	Statistician
Joseph Mweetwa	Demographer
Justin Hambamba	Statistician
Joshua Siuluta	Demographer
Edgar Phiri	Statistician
Lovemore Chikungu	Statistician
Dan Muyabi	Acting Statistician
Kennedy Muyendekwa	Senior Statistician
Wellani Simwinga	Statistician
Million Phiri	University of Zambia lecturer
Mwewa Kasonde	University of Zambia lecturer
Kafiswe Mwansa	University of Zambia lecturer
